CIVIL AND MORAL

By FRANCIS BACON

(Francis Bacon—Lord Verulam and Viscount St. Albans—was born at York House, Strand, January 22, 1561, the younger son of Sir Nicholas Bacon, who was Lord Keeper of the Great Seal. He was one of England's most noted philosophers, essayists, and statesmen. He was educated privately, and later at Trinity College, Cambridge. While a student at Cambridge he attracted favorable attention of Queen Elizabeth who dubbed him "The Young Lord Keeper". He was called to the Bar in 1582. His success at the bar was good and he entered the political arena as a member for Melcombe Regis, sitting for Taunton, Liverpool, Middlesex, and Southampton. Unfortunately Bacon was treacherous to his friends and flattered those above him. With the accession of James I, he lost no time in using his old art of flattery with the result that he was knighted, 1603; became Solicitor-General in 1607; Attorney-General in 1613; Lord Keeper, 1618; Lord Chancellor, and Baron Verulam in 1619, and Viscount St. Albans in 1621. His rise to greatness was followed by his downfall on March 17, 1621, when charges of corruption were laid against him by the Commons. Fined 40,000 pounds, he was committed to the Tower and was declared incapable of holding public office. He was now able to devote the rest of his life to literary and philosophical writings in which he really achieved greatness, and which constitutes his enduring title to fame. Among his noted works are, "Advancement of Learning", "Wisdom of Ancients", and he is at his best in his "Essays", which combine high sense of style with wisdom and keen observation of life. The indication by some writers that Bacon wrote some of the plays of Shakespeare has been discredited. Bacon died in 1626.)

ESSAY I

OF TRUTH

WHAT is truth? said jesting Pilate, and would not stay for an answer. Certainly there be that delight in giddiness, and count it a bondage to fix a belief; affecting free-will in thinking, as well as in acting. And though the sects of philosophers of that kind be gone, yet there remain certain discoursing wits which are of the same veins, though there be not so much blood in them as was in those of the ancients. But it is not only the difficulty and labour which men take in finding out the truth, nor again that when it is found it im-

poseth upon men's thoughts, that doth bring lies in favour; but a natural though corrupt love of the lie itself. One of the later school of the Grecians examineth the matter, and is at a stand to think what should be in it, that men should love lies; where neither they make for pleasure, as with poets; nor for advantage, as with the merchant; but for the lie's sake. But I cannot tell: this same truth is a naked and open day-light, that doth not shew the masques and mummeries and triumphs of the world, half so stately and daintily as candle-lights. Truth may perhaps come to the price of a pearl, that sheweth best by day; but it will not rise to the price of a diamond or carbuncle, that sheweth best in varied lights. A mixture of a lie doth ever add pleasure. Doth any man doubt, that if there were taken out of men's minds vain opinions, flattering hopes, false valuations, imaginations as one would, and the like, but it would leave the minds of a number of men poor shrunken things, full of melancholy and indisposition, and unpleasing to themselves? One of the fathers, in great severity, called poesy *vinum dæmonum*, because it filleth the imagination, and yet it is but with the shadow of a lie. But it is not the lie that passeth through the mind, but the lie that sinketh in and settleth in it, that doth the hurt, such as we spake of before. But howsoever these things are thus in men's depraved judgments and affections, yet truth, which only doth judge itself, teacheth that the inquiry of truth, which is the love-making or wooing of it, the knowledge of truth, which is the presence of it, and the belief of truth, which is the enjoying of it, is the sovereign good of human nature. The first creature of God, in the works of the days, was the light of the sense; the last was the light of reason; and his sabbath work, ever since, is the illumination of his Spirit. First he breathed light upon the face of the matter or chaos; then he breathed light into the face of man; and still he breatheth and inspireth light into the face of his chosen. The poet that beautified the sect that was otherwise inferior to the rest, saith yet excellently well: It is a pleasure to stand upon the shore, and to see ships tost upon the sea: a pleasure to stand in the window of a castle, and to see a battle and the adventures thereof below: but no pleasure is comparable to the standing upon the vantage ground of truth (a hill not to be commanded, and where the air is always clear and serene), and to see the errors, and wanderings, and mists, and tempests, in the vale below: so always that this prospect be with pity, and not with swelling or pride. Certainly, it is heaven upon earth, to have a man's mind move in charity, rest in providence, and turn upon the poles of truth.

To pass from theological and philosophical truth, to the truth of civil business: it will be acknowledged, even by those that practise it not, that clear and round dealing is the honour of man's nature; and that mixture of falsehood is like alloy in coin of gold and silver;

which may make the metal work the better, but it embaseth it. For these winding and crooked courses are the goings of the serpent; which goeth basely upon the belly, and not upon the feet. There is no vice that doth so cover a man with shame as to be found false and perfidious. And therefore Mountaigny saith prettily, when he inquired the reason, why the word of the lie should be such a disgrace and such an odious charge? saith he, If it be well weighed, to say that a man lieth, is as much to say as that he is brave towards God and a coward towards men. For a lie faces God, and shrinks from man. Surely the wickedness of falsehood and breach of faith cannot possibly be so highly expressed, as in that it shall be the last peal to call the judgments of God upon the generations of men; it being foretold, that when Christ cometh, he shall not find faith upon the earth.

ESSAY II

OF DEATH

MEN fear death, as children fear to go in the dark; and as that natural fear in children is increased with tales, so is the other. Certainly, the contemplation of death, as the wages of sin, and passage to another world, is holy and religious; but the fear of it, as a tribute due unto nature, is weak. Yet in religious meditations there is sometimes mixtures of vanity and of superstition. You shall read in some of the friars' books of mortification, that a man should think with himself what the pain is if he have but his finger's end pressed or tortured, and thereby imagine what the pains of death are, when the whole body is corrupted and dissolved: when many times death passeth with less pain than the torture of a limb; for the most vital parts are not the quickest of sense. And by him, that spake only as a philosopher and natural man, it was well said, *Pompa mortis magis terret quam mors ipsa*. Groans and convulsions, and a discoloured face, and friends weeping, and blacks, and obsequies, and the like, shew death terrible. It is worthy the observing, that there is no passion in the mind of man so weak, but it mates and masters the fear of death; and therefore death is no such terrible enemy, when a man hath so many attendants about him that can win the combat of him. Revenge triumphs over death; love slights it; honour aspireth to it; grief flieth to it; fear pre-occupateth it; nay, we read, after Otho the emperor had slain himself, pity (which is the tenderest of affections) provoked many to die, out of mere compassion to their sovereign, and as the truest sort of followers. Nay, Seneca adds niceness and satiety: *Cogita quam diu eadem feceris; mori velle, non tantum fortis, aut miser, sed etiam fastidiosus protest*. A man would die, though he were neither valiant nor miserable, only upon a weariness to do the same thing so oft over and over. It is no less worthy to observe, how little alteration, in good spirits, the approaches of death make; for they appear to be the same men till the last instant. Augustus Cæsar died in a compliment: *Livia, conjugii nostri memor, vive et vale*. Tiberius in dissimulation, as Tacitus saith of him: *Jam Tiberium vires et corpus, non dissimulatio, descrebant*. Vespasian in a jest, sitting upon the stool: *Ut puto Deus fio*. Galba with a sentence, *Feri, si ex re sit populi Romani*, holding forth his

neck. Septimius Severus in dispatch. *Adeste si quid mihi restat agendum.* And the like. Certainly the Stoics bestowed too much cost upon death, and by their great preparations made it appear more fearful. Better saith he, *Qui finem vitæ extremum inter munera ponat Naturæ.* It is as natural to die as to be born; and to a little infant, perhaps, the one is as painful as the other. He that dies in an earnest pursuit is like one that is wounded in hot blood; who, for the time, scarce feels the hurt; and therefore a mind fixed and bent upon somewhat that is good doth avert the dolours of death. But above all, believe it, the sweetest canticle is *Nunc dimittis*; when a man hath obtained worthy ends and expectations. Death hath this also, that it openeth the gate to good fame, and extinguisheth envy.—*Extinctus amabitur idem.*

ESSAY III

OF UNITY IN RELIGION

RELIGION being the chief band of human society, it is a happy thing when itself is well contained within the true band of unity. The quarrels and divisions about religions were evils unknown to the heathen. The reason was, because the religion of the heathen consisted rather in rites and ceremonies, than in any constant belief. For you may imagine what kind of faith theirs was, when the chief doctors and fathers of their church were the poets. But the true God hath this attribute, that he is a jealous God; and therefore his worship and religion will endure no mixture nor partner. We shall therefore speak a few words concerning the unity of the church; what are the fruits thereof; what the bounds; and what the means.

The fruits of unity (next unto the well pleasing of God, which is all in all) are two; the one towards those that are without the church, the other towards those that are within. For the former; it is certain that heresies and schisms are of all others the greatest scandals; yea, more than corruption of manners. For as in the natural body a wound or solution of continuity is worse than a corrupt humour, so in the spiritual. So that nothing doth so much keep men out of the church, and drive men out of the church, as breach of unity. And therefore whenever it cometh to that pass, that one saith *Ecce in deserto*, another saith *Ecce in penetralibus*; that is, when some men seek Christ in the conventicles of heretics, and others in an outward face of a church, that voice had need continually to sound in men's ears, *Nolite exire*,—Go not out. The doctor of the Gentiles (the propriety of whose vocation drew him to have a special care of those without) saith, If an heathen come in, and hear you speak with several tongues, will he not say that you are mad? And certainly it is little better, when atheists and profane persons do hear of so many discordant and contrary opinions in religion; it doth avert them from the church, and maketh them to sit down in the chair of the scorers. It is but a light thing to be vouched in so serious a matter, but yet it expresseth well the deformity. There is a master of scoffing, that in his catalogue of books of a feigned library sets down this title of a book, *The morris dance of heretics*. For indeed every sect of them hath a diverse posture or cringe by themselves which cannot but move

derision in worldings and depraved politics, who are apt to contemn holy things.

As for a fruit towards those that are within, it is peace, which containeth infinite blessings: it establisheth faith; it kindleth charity; the outward peace of the church distilleth into peace of conscience; and it turneth the labours of writing and reading of controversies into treaties of mortification and devotion.

Concerning the bounds of unity; the true placing of them importeth exceedingly. There appear to be two extremes. For to certain zelants all speech of pacification is odious. *Is it peace, Jehu? What hast thou to do with peace? turn thee behind me.* Peace is not the matter, but following and party. Contrariwise, certain Laodiceans and lukewarm persons think they may accommodate points of religion by middle ways, and taking part of both, and witty reconcilements; as if they would make an arbitrement between God and man. Both these extremes are to be avoided; which will be done, if the league of Christians penned by our Savior Himself were in the two cross clauses thereof soundly and plainly expounded: He that is not with us is against us; and again, He that is not against us is with us: that is, if the points fundamental and of substance in religion were truly discerned and distinguished from points not merely of faith, but of opinion, order or good intention. This is a thing may seem to many a matter trivial and done already; but if it were done less partially, it would be embraced more generally.

Of this I may give only this advice, according to my small model. Men ought to take heed of rending God's church by two kinds of controversies. The one is, when the matter of the point controverted is too small and light, not worth the heat and strife about it, kindled only by contradiction. For, as it is noted by one of the fathers, Christ's coat indeed had no seam, but the church's vesture was of divers colours; whereupon he saith, *In veste varietas sit, scissura non sit*: they be two things, unity and uniformity. The other is, when the matter of the point controverted is great, but it is driven to an over-great subtilty and obscurity; so that it becometh a thing rather ingenious than substantial. A man that is of judgment and understanding shall sometimes hear ignorant men differ, and know well within himself that those which so differ mean one thing, and yet they themselves would never agree. And if it come so to pass in that distance of judgment which is between man and man, shall we not think that God above, that knows the heart, doth not discern that frail men in some of their contradictions intend the same thing, and accepteth of both? The nature of such controversies is excellently expressed by St. Paul in the warning and precept that he giveth concerning the same, *Devita*

profanas vocum novitates, et oppositiones falsi nominis scientiæ. Men create oppositions which are not; and put them into new terms so fixed, as whereas the meaning ought to govern the term, the term in effect governeth the meaning. There be also two false peaces or unities: the one, when the peace is grounded but upon an implicit ignorance; for all colours will agree in the dark: the other, when it is pieced up upon a direct admission of contraries in fundamental points. For truth and falsehood, in such things, are like the iron and clay in the toes of Nebuchadnezzar's image; they may cleave, but they will not incorporate.

Concerning the means of procuring unity; men must beware, that is the procuring or uniting of religious unity, they do not dissolve and deface the laws of charity and human society. There be two swords amongst Christians, the spiritual and temporal; and both have their due office and place in the maintenance of religion. But we may not take up the third sword, which is Mahomet's sword, or like unto it; that is, to propagate religion by wars, or by sanguinary persecutions to force consciences; except it be in cases of overt scandal, blasphemy, or intermixture of practice against the state; much less to nourish seditious; to authorize conspiracies and rebellions; to put the sword into the people's hands; and the like; tending to the subversion of all government, which is the ordinance of God. For this is but to dash the first table against the second; and so to consider men as Christians, as we forget that they are men. Lucretius the poet, when he beheld the act of Agamemnon, that could endure the sacrificing of his own daughter, exclaimed:

Tantum religio potuit suadere malorum.

What would he have said, if he had known of the massacre in France, or the power treason of England? He would have been seven times more Epicure and atheist than he was. For as the temporal sword is to be drawn with great circumspection in cases of religion; so it is a thing monstrous to put it into the hands of the common people. Let that be left unto the Anabaptists, and other furies. It was great blasphemy when the devil said, I will ascend and be like the Highest; but it is greater blasphemy to personate God, and bring him in saying, I will descend and be like the prince of darkness: and what is it better, to make the cause of religion to descend to the cruel and execrable actions of murdering princes, butchery of people, and subversion of states and governments? Surely this is to bring down the Holy Ghost, in stead of the likeness of a dove, in the shape of a vulture or raven; and to set out of the bark of a Christian church a flag of a bark of pirates and assassins. Therefore it is most necessary that the church by doctrine and decree, princes by their sword, and all learnings, both

Christian and moral, as by their Mercury rod, do damn and send to hell for ever those facts and opinions tending to the support of the same; as hath been already in good part done. Surely in counsels concerning religion that counsel of the apostle would be prefixed, *Ira hominis non implet justitiam Dei*. And it was a notable observation of a wise father, and no less ingenuously confessed: that those which held and persuaded pressure of consciences, were commonly interested therein themselves for their own ends.

ESSAY IV

OF REVENGE

REVENGE is a kind of wild justice; which the more man's nature runs to, the more ought law to weed it out. For as for the first wrong, it doth but offend the law; but the revenge of that wrong putteth the law out of office. Certainly, in taking revenge, a man is but even with his enemy; but in passing it over, he is superior; for it is a prince's part to pardon. And Solomon, I am sure, saith, It is the glory of a man to pass by an offence. That which is past is gone, and irrevocable; and wise men have enough to do with things present and to come: therefore they do but trifle with themselves, that labour is past matters. There is no man doth a wrong for the wrong's sake; but thereby to purchase himself profit, or pleasure, or honour, or the like. Therefore why should I be angry with a man for loving himself better than me? And if any man should do wrong merely out of ill nature, why, yet it is but like the thorn or briar, which prick and scratch, because they can do no other. The most tolerable sort of revenge is for those wrongs which there is no law to remedy; but then let a man take heed the revenge be such as there is no law to punish; else a man's enemy is still beforehand, and it is two for one. Some, when they take revenge, are desirous the party should know whence it cometh: this is the more generous. For the delight seemeth to be not so much in doing the hurt as in making the party repent: but base and crafty cowards are like the arrow that flieth in the dark. Cosmus, duke of Florence, had a desperate saying against perfidious or neglecting friends, as if those wrongs were unpardonable: you shall read (saith he) that we are commanded to forgive our enemies; but you never read that we are commanded to forgive our friends. But yet the spirit of Job was in a better tune: shall we (saith he) take good at God's hands, and not be content to take evil also? And so of friends in a proportion. This is certain, that a man that studieth revenge keeps his own wounds green, which otherwise would heal and do well. Public revenges are for the most part fortunate; as that for the death of Cæsar; for the death of Pertinax; for the death of Henry the Third of France; and many more. But in private revenges it is not so. Nay rather, vindicative persons live the life of witches; who as they are mischievous, so end they infortunate.

ESSAY V

OF ADVERSITY

It was an high speech of Seneca (after the manner of the Stoics): That the good things which belong to prosperity are to be wished; but the good things that belong to adversity are to be admired. *Bona rerum secundarum optabilia, adversarum mirabilia.* Certainly, if miracles be the command over nature, they appear most in adversity. It is yet a higher speech of his than the other (much too high for a heathen): It is true greatness to have in one the frailty of a man, and the security of a god. *Vere magnum, habere fragilitatem hominis, securitatem dei.* This world have done better in poesy, where transcendences are more allowed. And the poets indeed have been busy with it; for it is in effect the thing which is figured in that strange fiction of the ancient poets, which seemeth not to be without mystery; nay, and to have some approach to the state of a Christian: that Hercules, when he went to unbind Prometheus (by whom human nature is represented), sailed the length of the great ocean in an earthen pot or pitcher: lively describing Christian resolution, that saileth in the frail bark of the flesh through the waves of the world. But to speak in a mean. The virtue of prosperity is temperance; the virtue of adversity is fortitude; which in morals is the more heroical virtue. Prosperity is the blessing of the Old Testament; adversity is the blessing of the New; which carrieth the greater benediction, and the clearer revelation of God's favour. Yet even in the Old Testament, if you listen to David's harp, you shall hear as many hearse-like airs as carols; and the pencil of the Holy Ghost hath laboured more in describing the afflictions of Job than the felicities of Solomon. Prosperity is not without many fears and distastes; and adversity is not without comforts and hopes. We see in needleworks and embroideries, it is more pleasing to have a lively work upon a sad and solemn ground, than to have a dark and melancholy work upon a lightsome ground: judge therefore of the pleasure of the heart by the pleasure of the eye. Certainly virtue is like precious odours; most fragrant when they are incensed or crushed: for prosperity doth best discover vice; but adversity doth best discover virtue.

ESSAY VI

OF SIMULATION AND DISSIMULATION

DISSIMULATION is but a faint kind of policy or wisdom; for it asketh a strong wit and a strong heart to know when to tell truth, and to do it. Therefore it is the weaker sort of politics that are the great dissemblers.

Tacitus saith, Livia sorted well with the arts of her husband and dissimulation of her son; attributing arts of policy to Augustus, and dissimulation to Tiberius. And again, when Mucianus encourageth Vespasian to take arms against Vitellius, he saith, We rise not against the piercing judgment of Augustus, nor the extreme caution or closeness of Tiberius. These properties, of arts or policy, and dissimulation or closeness, are indeed habits and faculties several and to be distinguished. For if a man have that penetration of judgment as he can discern what things are to be laid open, and what to be secreted, and what to be shewed at half lights, and to whom, and when (which indeed are arts of state and arts of life, as Tactius well called them), to him a habit of dissimulation is a hinderance and a poorness. But if a man cannot obtain to that judgment, then it is left to him, generally, to be close, and a dissembler. For where a man cannot choose or vary in particulars, there it is good to take the safest and wariest way in general; like the going softly by one that cannot well see. Certainly the ablest men that ever were have had all an openness and frankness of dealing, and a name of certainty and veracity; but then they were like horses well managed; for they could tell passing well when to stop or turn; and at such times when they thought the case indeed required dissimulation, if then they used it, it came to pass that the former opinion spread abroad of their good faith and clearness of dealing made them almost invisible.

There be three degrees of this hiding and veiling of a man's self. The first, closeness, reservation, and secrecy; when a man leaveth himself without observation, or without hold to be taken, what he is. The second, dissimulation, in the negative; when a man lets fall signs and arguments, that he is not that he is. And the third, simulation, in the affirmative; when a man industriously and expressly feigns and pretends to be that he is not.

For the fact of these, secrecy: it is indeed the virtue of a confessor; and assuredly the secret man heareth many confessions; for who will open himself to a blab or a blabber? But if a man be thought secret, it inviteth discovery; as the more close air sucketh in the more open: and as in confession the revealing is not for worldly use, but for the ease of a man's heart, so secret men come to the knowledge of many things in that kind; while men rather discharge their minds than impart their minds. In few words, mysteries are due to secrecy. Besides (to say truth) nakedness is uncomely, as well in mind as body; and it addeth no small reverence to men's manners and actions, if they be not altogether open. As for talkers and futile persons, they are commonly vain and credulous withal. For he that talketh what he knoweth, will also talk what he knoweth not. Therefore set it down, that an habit of secrecy is both politic and moral. And in this part, it is good that a man's face give his tongue leave to speak. For the discovery of a man's self by the tracts of his countenance is a great weakness and betraying; by how much it is many times more marked and believed than a man's words.

For the second, which is dissimulation: it followeth many times upon secrecy by a necessity; so that he that will be secret must be a dissembler in some degree. For men are too cunning to suffer a man to keep an indifferent carriage between both, and to be secret, without swaying the balance on either side. They will so beset a man with questions, and draw him on, and pick it out of him, that, without an absurd silence, he must shew an inclination one way; or if he do not, they will gather as much by his silence as by his speech. As for equivocations, or oraculous speeches, they cannot hold out long. So that no man can be secret, except he give himself to a little scope of dissimulation; which is, as it were, but the skirts or train of secrecy.

But for the third degree, which is simulation and false profession: that I hold more culpable, and less politic; except it be in great and rare matters. And therefore a general custom of simulation (which is this last degree) is a vice, rising either of a natural falseness of fearfulness, or of a mind that hath some main faults, which because a man must needs disguise, it maketh him practice simulation in other things, lest his hand should be out of use.

The great advantages of simulation and dissimulation are three. First, to lay asleep opposition, and to surprise. For where a man's intentions are published, it is an alarum to call up all that are against them. The second is, to reserve to a man's self a fair retreat. For if a man engage himself by a manifest declaration, he must go through, or take a fall. The third is, the better to discover the

mind of another. For to him that opens himself men will hardly shew themselves adverse; but will (fair) let him go on, and turn their freedom of speech to freedom of thought. And therefore it is a good shrewd proverb of the Spaniard, Tell a lie and find a troth; as if there were no way of discovery but by simulation. There be also three disadvantages, to set it even. The first, that simulation and dissimulation commonly carry with them a shew of fearfulness, which in any business doth spoil the feathers of round flying up to the mark. The second, that it puzzleth and perplexeth the conceits of many that perhaps would otherwise co-operate with him, and makes a man walk almost alone to his own ends. The third and greatest is, that it depriveth a man of one of the most principal instruments for action, which is trust and belief. The best composition and temperature is to have openness in fame and opinion; secrecy in habit; dissimulation in seasonable use; and a power to feign, if there be no remedy.

ESSAY VII

OF PARENTS AND CHILDREN

THE joys of parents are secret, and so are their griefs and fears: they cannot utter the one, nor they will not utter the other. Children sweeten labours, but they make misfortunes more bitter: they increase the cares of life, but they mitigate the remembrance of death. The perpetuity by generation is common to beasts; but memory, merit, and noble works are proper to men: and surely a man shall see the noblest works and foundations have proceeded from childless men, which have sought to express the images of their minds, where those of their bodies have failed: so the care of posterity is most in them that have no posterity. They that are the first raisers of their houses are most indulgent towards their children; beholding them as the continuance not only of their kind but of their work; and so both children and creatures.

The difference in affection of parents towards their several children is many times unequal, and sometimes unworthy, especially in the mother; as Salomon saith, A wise son rejoiceth the father, but an ungracious son shames the mother. A man shall see, where there is a house full of children, one or two of the eldest respected, and the youngest made wantons; but in the midst some that are as it were forgotten, who many times nevertheless prove the best. The illiberality of parents in allowance towards their children is an harmful error; makes them base; acquaints them with shifts; makes them sort with mean company; and makes them surfeit more when they come to plenty: and therefore the proof is best, when men keep their authority towards their children, but not their purse. Men have a foolish manner (both parents and schoolmasters and servants) in creating and breeding an emulation between brothers during childhood, which many times sorteth to discord when they are men, and disturbeth families. The Italians make little difference between children and nephews or near kinfolks; but so they be of the lump, they care not though they pass not through their own body. And, to say truth, in nature it is much a like matter; in-somuch that we see a nephew sometimes resembleth an uncle or a kinsman more than his own parents; as the blood happens. Let parents choose betimes the vocations and courses they mean their children

should take; for they are most flexible; and let them not too much apply themselves to the disposition of their children, as thinking they will take best to that which they have most mind to. It is true, that if the affection or aptness of the children be extraordinary, then it is good not to cross it; but generally the precept is good, *Optimum elige, suave et facile illud faciet consuetudo*. Younger brothers are commonly fortunate, but seldom or never where the elder are disinherited.

ESSAY VIII

OF MARRIAGE AND SINGLE LIFE

HE that hath wife and children hath given hostages to fortune; for they are impediments to great enterprises, either of virtue or mischief. Certainly, the best works, and of greatest merit for the public, have proceeded from the unmarried or childless men, which both in affection and means have married and endowed the public. Yet it were great reason that those that have children should have greatest care of future times; unto which they know they must transmit their dearest pledges. Some there are, who though they lead a single life, yet their thoughts do end with themselves, and account future times impertinences. Nay, there are some other that account wife and children but as bills of charges. Nay more, there are some foolish rich covetous men that take a pride in having no children, because they may be thought so much the richer. For perhaps they have heard some talk, Such an one is a great rich man, and another except to it, Yea, but he hath a great charge of children; as if it were an abatement to his riches. But the most ordinary cause of a single life is liberty; especially in certain self-pleasing and humorous minds, which are so sensible of every restraint. as they will go near to think their girdles and garters to be bonds and shackles. Unmarried men are best friends, best masters, best servants; but not always best subjects; for they are light to run away; and almost all fugitives are of that condition. A single life doth well with churchmen; for charity will hardly water the ground where it must first fill a pool. It is indifferent for judges and magistrates; for if they be facile and corrupt, you shall have a servant five times worse than a wife. For soldiers, I find the generals commonly in their hortatives put men in mind of their wives and children; and I think the despising of marriage amongst the Turks maketh the vulgar soldier more base. Certainly wife and children are a kind of discipline of humanity; and single men, though they be many times more charitable, because their means are less exhaust, yet, on the other side, they are more cruel and hard-hearted (good to make severe inquisitors), because their tenderness is not so oft called upon. Grave natures, led by custom, and therefore constant, are commonly loving husbands; as was said of Ulysses,

Vetulam suam prætulit immortalitati. Chaste women are often proud and froward, as presuming upon the merit of their chastity. It is one of the best bonds both of chastity and obedience in the wife, if she think her husband wise; which she will never do if she finds him jealous. Wives are young men's mistresses; companions for middle age; and old men's nurses. So as a man may have a quarrel to marry when he will. But yet he was reputed one of the wise men, that made answer to the question, when a man should marry? A young man not yet, an elder man not at all. It is often seen that bad husbands have very good wives; whether it be that it raiseth the price of their husband's kindness when it comes; or that the wives take a pride in their patience. But this never fails, if the bad husbands were of their own choosing, against their friends' consent; for then they will be sure to make good their own folly.

ESSAY IX

OF ENVY

THERE be none of the affections which have been noted to fascinate or bewitch, but love and envy. They both have vehement wishes; they frame themselves readily into imaginations and suggestions; and they come easily into the eye, especially upon the presence of the objects; which are the points that conduce to fascination, if any such thing there be. We see, likewise, the scripture calleth envy an evil eye; and the astrologers call the evil influences of the stars evil aspects; so that still there seemeth to be acknowledged, in the act of envy, an ejaculation or irradiation of the eye. Nay, some have been so curious as to note, that the times when the stroke or percussion of an envious eye doth most hurt, are when the party envied is beheld in glory or triumph; for that sets an edge upon envy; and besides, at such times the spirits of the person envied do come forth most into the outward parts, and so meet the blow.

But leaving these curiosities (though not unworthy to be thought on in fit place), we will handle, what persons are apt to envy others; what persons are most subjects to be envied themselves; and what is the difference between public and private envy.

A man that hath no virtue in himself ever envieth virtue in others. For men's minds will either feed upon their own good, or upon others' evil; and who wanteth the one will prey upon the other; and whoso is out of hope to attain to another's virtue will seek to some at even hand by depressing another's fortune.

A man that is busy and inquisitive is commonly envious. For to know much of other men's matters cannot be because all that ado may concern his own estate; therefore it must needs be that he taketh a kind of play-pleasure in looking upon the fortunes of others. Neither can he that mindeth but his own business find much matter for envy. For envy is a gadding passion, and walketh the streets, and doth not keep home: *Non est curiosus, quin idem sit malevolus.*

Men of noble birth are noted to be envious towards new men when they rise. For the distance is altered; and it is like a deceit of the eye, that when others come on they think themselves go back.

Deformed persons, and eunuchs, and old men, and bastards, are envious. For he that cannot possibly mend his own case, will do

what he can to impair another's. Except these defects light upon a very brave and heroical nature, which thinketh to make his natural wants part of his honour; in that it should be said, that an eunuch, or a lame man, did such great matters; affecting the honour of a miracle; as it was in Narses the eunuch, and Agesilaus and Tamberlanes, that were lame men.

The same is the case of men that rise after calamities and misfortunes. For they are as men fallen out with the times, and think other men's harms a redemption of their own sufferings.

They that desire to excel in too many matters, out of levity and vain glory, are ever envious. For they cannot want work; it being impossible but many in some one of those things should surpass them. Which was the character of Adrian the Emperor, that mortally envied poets and painters and artificers in works wherein he had a vein to excel.

Lastly, near kinsfolks, and fellows in office, and those that have been bred together, are more apt to envy their equals when they are raised. For it doth upbraid unto them their own fortunes, and pointeth at them, and cometh oftener into their remembrance, and incurreth likewise more into the note of others; and envy ever redoubleth from speech and fame. Cain's envy was the more vile and malignant towards his brother Abel, because when his sacrifice was better accepted there was nobody to look on. Thus much for those that are apt to envy.

Concerning those that are more or less subject to envy. First, persons of eminent virtue, when they are advanced, are less envied. For their fortune seemeth but due unto them; and no man envieth the payment of a debt, but rewards and liberality rather. Again, envy is ever joined with the comparing of a man's self; and where there is no comparison, no envy; and therefore kings are not envied but by kings. Nevertheless it is to be noted that unworthy persons are most envied at their first coming in, and afterwards overcome it better; whereas, contrariwise, persons of worth and merit are most envied when their fortune continueth long. For by that time, though their virtue be the same, yet it hath not the same lustre; for fresh men grow up that darken it.

Persons of noble blood are less envied in their rising; for it seemeth but right done to their birth. Besides, there seemeth not much added to their fortune; and envy is as the sunbeams, that beat hotter upon a bank or steep rising ground, than upon a flat. And for the same reason those that are advanced by degrees are less envied than those that are advanced suddenly and *per saltum*.

Those that have joined with their honour great travails, cares, or perils, are less subject to envy. For men think that they earn their honours hardly, and pity them sometimes; and pity ever healeth envy.

Wherefore you shall observe that the more deep and sober sort of politic persons, in their greatness, are ever bemoaning themselves, what a life they lead; chanting a *quanta patimur*. Not that they feel it so, but only to abate the edge of envy. But this is to be understood of business that is laid upon men, and not such as they call unto themselves. For nothing increaseth envy more than an unnecessary and ambitious engrossing of business. And nothing doth extinguish envy more than for a great person to preserve all other inferior officers in their full rights and pre-eminences of their places. For by that means there be so many screens between him and envy.

Above all, those are most subject to envy, which carry the greatness of their fortunes in an insolent and proud manner; being never well but while they are shewing how great they are, either by outward pomp, or by triumphing over all opposition or competition; whereas wise men will rather do sacrifice to envy, in suffering themselves sometimes of purpose to be crossed and overborne in things that do not much concern them. Notwithstanding, so much is true, that the carriage of greatness is a plain and open manner (so it be without arrogancy and vain-glory) doth draw less envy than if it be in a more crafty and cunning fashion. For in that course a man doth but disavow fortune; and seemeth to be conscious of his own want in worth; and doth but teach others to envy him.

Lastly, to conclude this part; as we said in the beginning that the act of envy had somewhat in it of witchcraft, so there is no other cure of envy but the cure of witchcraft; and that is, to remove the lot (as they call it) and to lay it upon another. For which purpose the wiser sort of great persons bring in ever upon the stage somebody upon whom to derive the envy that would come upon themselves; sometimes upon ministers and servants; sometimes upon colleagues and associates; and the like; and for that turn there are never wanting some persons of violent and undertaking natures, who, so they may have power and business, will take it at any cost.

Now to speak of public envy. There is yet some good in public envy, whereas in private there is none. For public envy is as an ostracism, that eclipseth men when they grow too great. And therefore it is a bridle also to great ones, to keep them within bounds.

This envy, being in the Latin word *invidia*, goeth in the modern languages by the name of discontentment: of which we shall speak in handling Sedition. It is a disease in the state like to infection. For as infection spreadeth upon that which is sound, and tainteth it; so when envy is gotten once into a state, it traduceth even the best actions thereof, and turneth them into an ill odour. And therefore there is little won by intermingling of plausible actions. For that doth argue but a weakness and fear of envy, which hurteth so much the

more; as it is likewise usual in infections; which if you fear them, you call them upon you.

This public envy seemeth to beat chiefly upon principal officers or ministers, rather than upon kings and estates themselves. But this is a sure rule, that if the envy upon the ministers be great, when the cause of it in him is small; or if the envy be general in a manner upon all the ministers of an estate; then the envy (though hidden) is truly upon the estate itself. And so much of public envy or discontentment, and the difference thereof from private envy, which was handled in the first place.

We will add this, in general, touching the affection of envy, that of all other affections it is the most importune and continual. For of other affections there is occasion given but now and then. And therefore it was well said, *Invidia festos dies non agit*. For it is ever working upon some or other. And it is also noted that love and envy do make a man pine, which other affections do not, because they are not so continual. It is also the vilest affection, and the most depraved; for which cause it is the proper attribute of the devil, who is called The envious man, that soweth tares amongst the wheat by night: as it always cometh to pass, that envy worketh subtilly, and in the dark, and to the prejudice of good things, such as is the wheat.

ESSAY X

OF LOVE

THE stage is more beholding to love than the life of man. For as to the stage, love is ever matter of comedies, and now and then of tragedies: but in life it doth much mischief; sometimes like a siren, sometimes like a fury. You may observe, that amongst all the great and worthy persons (whereof the memory remaineth, either ancient or recent), there is not one that hath been transported to the mad degree of love; which shows that great spirits and great business do keep out this weak passion. You must except, nevertheless, Marcus Antonius, the half partner of the empire of Rome, and Appius Claudius, the decemvir and lawgiver: whereof the former was indeed a voluptuous man, and inordinate; but the latter was an austere and wise man: and therefore it seems (though rarely) that love can find entrance not only into an open heart, but also into a heart well fortified, if watch be not well kept. It is a poor saying of Epicurus, *Satis magnum alter alteri theatrum sumus*: as if man, made for the contemplation of heaven and all noble objects, should do nothing but kneel before the little idol, and make himself subject, though not of the mouth (as beasts are), yet of the eye, which was given them for higher purposes. It is a strange thing to note the excess of this passion, and how it braves the nature and value of things, by this, that the speaking in a perpetual hyperbole is comely in nothing but in love. Neither is it merely in the phrase; for whereas it hath been well said that the arch-flatterer, with whom all the petty flatterers have intelligence, is a man's self, certainly the lover is more. For there was never proud man thought so absurdly well of himself as the lover doth of the person loved: and therefore it was well said, That it is impossible to love and to be wise. Neither doth this weakness appear to others only, and not to the party loved, but to the loved most of all, except the love be reciproque. For it is a true rule, that love is ever rewarded either with the reciproque or with an inward and secret contempt. By how much the more men ought to beware of this passion, which loseth not only other things, but itself. As for the other losses, the poet's relation doth well figure them: That he that preferred Helena, quitted the gifts of Juno and Pallas. For whosever esteemeth too much of amorous affection, quitteth both

of thy place, set before thee the best examples; for imitation is a globe of precepts. And after a time set before thee thine own example; and examine thyself strictly, whether thou didst not best at first. Neglect not also the examples of those that have carried themselves ill in the same place; not to set off thyself by taxing their memory, but to direct thyself what to avoid. Reform, therefore, without bravery or scandal of former times and persons; but yet set it down to thyself as well to create good precedents as to follow them. Reduce things to the first institution, and observe wherein and how they have degenerate; but yet ask counsel of both times; of the ancient time, what is best; and of the latter time, what is fittest. Seek to make thy course regular, that men may know beforehand what they may expect; but be not too positive and peremptory; and express thyself well when thou digressest from thy rule. Preserve the right of thy place, but stir not questions of jurisdiction: and rather assume thy right in silence and *de facto*, than voice it with claims and challenges. Preserve likewise the rights of inferior places; and think it more honour to direct in chief than to be busy in all. Embrace and invite helps and advices touching the execution of thy place; and do not drive away such as bring thee information as meddlers, but accept of them in good part. The vices of authority are chiefly four: delays, corruption, roughness, and facility. For delays; give easy access; keep times appointed; go through with that which is in hand; and interlace not business but of necessity. For corruption; do not only bind thine own hands or thy servants' hands from taking, but bind the hands of suitors also from offering. For integrity used doth the one; but integrity professed, and with a manifest detestation of bribery, doth the other. And avoid not only the fault, but the suspicion. Whosoever is found variable, and changeth manifestly without manifest cause, giveth suspicion of corruption. Therefore always when thou changest thine opinion or course, profess it plainly and declare it, together with the reasons that move thee to change; and do not think to steal it. A servant or a favourite, if he be inward, and no other apparent cause of esteem, is commonly thought but a by-way to close corruption. For roughness, it is a needless cause of discontent: severity breedeth fear, but roughness breedeth hate. Even reproofs from authority ought to be grave, and not taunting. As for facility, it is worse than bribery. For bribes come but now and then; but if importunity or idle respects lead a man, he shall never be without. As Salomon saith: To respect persons is not good; for such a man will transgress for a piece of bread. It is most true that, was anciently spoken, A place sheweth the man: and it sheweth some to the better, and some to the worse. *Omnium consensu capax imperii, nisi imprasset*, saith Tacitus of Galba; but of Vespasian he saith, *Solus imperantium Vespasianus mutatus in melius*: though the one

was meant of sufficiency, the other of manners and affection. It is an assured sign of a worthy and generous spirit, whom honour amends. For honour is, or should be, the place of virtue; and as in nature things move violently to their place, and calmly in their place; so virtue in ambition is violent, in authority settled and calm. All rising to great place is by a winding stair; and if there be factions, it is good to side a man's self whilst he is in the rising, and to balance himself when he is placed. Use the memory of thy predecessor fairly and tenderly; for if thou dost not, it is a debt will sure be paid when thou are gone. If thou have colleagues, respect them, and rather call them when they look not for it, than exclude them when they have reason to look to be called. Be not too sensible or to remembering of thy place in conversation and private answers to suitors; but let it rather be said, When he sits in place he is another man.

ESSAY XII

OF BOLDNESS

IT is a trivial grammar-school text, but yet worthy a wise man's consideration. Question was asked of Demosthenes, what was the chief part of an orator? he answered, action: what next? action: what next again? action. He said it that knew it best, and had by nature himself no advantage in that he commended. A strange thing, that that part of an orator which is but superficial, and rather the virtue of a player, should be placed so high above those other noble parts of invention, elocution, and the rest; nay, almost alone, as if it were all in all. But the reason is plain. There is in human nature generally more of the fool than of the wise; and therefore those faculties by which the foolish part of men's minds is taken are most potent. Wonderful like is the case of boldness in civil business: what first? boldness: what second and third? boldness. And yet boldness is a child of ignorance and baseness, far inferior to other parts. But nevertheless it doth fascinate and bind hand and foot those that are either shallow in judgment or weak in courage, which are the greatest part; yea, and prevaieth with wise men at weak times. Therefore we see it hath done wonders in popular states, but with senates and princes less and more ever upon the first entrance of bold persons into action than soon after; for boldness is an ill keeper of promise. Surely, as there are mountebanks for the natural body, so are there mountebanks for the politic body; men that undertake great cures, and perhaps have been lucky in two or three experiments, but want the grounds of science, and therefore cannot hold out. Nay, you shall see a bold fellow many times do Mahomet's miracle. Mahomet made the people believe that he would call an hill to him, and from the top of it offer up his prayers for the observers of his law. The people assembled; Mahomet called the hill to come to him, again and again; and when the hill stood still, he was never a whit abashed, but said, If the hill will not come to Mahomet, Mahomet will go to the hill. So these men, when they have promised great matters and failed most shamefully, yet (if they have the perfection of boldness) they will but slight it over, and make a turn, and no more ado. Certainly, to men of great judgements, bold persons

are a sport to behold; nay, and to be vulgar also, boldness hath somewhat of the ridiculous. For if absurdity be the subject of laughter, doubt you not but great boldness is seldom without some absurdity. Especially it is a sport to see, when a bold fellow is out of countenance; for that puts his face into a most shrunken and wooden posture; as needs it must; for in bashfulness the spirits do a little go and come; but with bold men, upon like occasion, they stand at a stay; like a stale at chess, where it is no mate, but yet the game cannot stir. But this last were fitter for a satire than for a serious observation. This is well to be weighed, that boldness is ever blind; for it seeth not dangers and inconveniences. Therefore it is ill in counsel, good in execution; so that the right use of bold persons is, that they never command in chief, but be seconds, and under the direction of others. For in counsel it is good to see dangers; and in execution not to see them, except they be very great.

ESSAY XIII

OF GOODNESS, AND GOODNESS OF NATURE

I TAKE goodness in this sense, the affecting of the weal of men, which is that the Grecians call philanthropia; and the word humanity (as it is used) is a little too light to express it. Goodness I call the habit, and goodness of nature the inclination. This, of all virtues and dignities of the mind, is the greatest, being the character of the Diety; and without it man is a busy, mischievous, wretched thing, no better than a kind of vermin. Goodness answers to the theological virtue charity, and admits no excess, but error. The desire of power in excess caused the angels to fall; the desire of knowledge in excess caused man to fall; but in charity there is no excess; neither can angel or man come in danger by it. The inclination to goodness is imprinted deeply in the nature of man; insomuch that if it issue not towards men, it will take unto other living creatures; as it is seen in the Turks, a cruel people, who nevertheless are kind to beasts, and give alms to dogs and birds; insomuch as Busbechius reporteth, a Christian boy in Constantinople had like to have been stoned for gagging in a waggishness a long-billed fowl. Errors indeed in this virtue of goodness or charity may be committed. The Italians have an ungracious proverb, *Tanto buon che val niente*: So good, that he is good for nothing. And one of the doctors of Italy, Nicholas Machiavel, had the confidence to put in writing, almost in plain terms, That the Christian faith had given up good men in prey to those that are tyrannical and unjust. Which he spake, because indeed there was never law, or sect, or opinion, did so much magnify goodness as the Christian religion doth. Therefore, to avoid the scandal and the danger both, it is good to take knowledge of the errors of an habit so excellent. Seek the good of other men, but be not in bondage to their faces or fancies; for that is but facility or softness; which taketh an honest mind prisoner. Neither give thou Æsop's cock a gem, who would be better pleased and happier if he had had a barley-corn. The example of God teacheth the lesson truly: He sendeth his rain, and maketh his sun to shine, upon the just and unjust; but he doth not rain wealth, nor shine honour and virtues, upon men equally. Common benefits are to be communicate with all, but peculiar benefits with choice. And beware how in making the por-

traiture thou breakest the pattern; for divinity maketh the love of ourselves the pattern, the love of our neighbors but the portraiture. Sell all thou hast, and give it to the poor, and follow me: but sell not all thou hast, except thou come and follow me; that is, except thou have a vocation wherein thou mayest do as much good with little means as with great; for otherwise in feeding the streams thou driest the fountain. Neither is there only a habit of goodness, directed by right reason; but there is in some men, even in nature, a disposition towards it; as on the other side there is a natural malignity. For there be that in their nature do not affect the good of others. The lighter sort of malignity turneth but to a crossness, of frowardness, or aptness to oppose or difficulties, or the like; but the deeper sort, to envy and mere mischief. Such men in other men's calamities are, as it were, in season, and are ever on the loading part; not so good as the dogs that licked Lazarus' sores, but like flies that are still buzzing upon anything that is raw; misanthropi, that make it their practice to bring men to the bough, and yet have never a tree for the purpose in their gardens, as Timon had. Such dispositions are the very errors of human nature; and yet they are the fittest timber to make great politics of; like to knee-timber, that is good for ships that are ordained to be tossed, but not for building houses that shall stand firm. The parts and signs of goodness are many. If a man be gracious and courteous to strangers, it shews he is a citizen of the world, and that his heart is no island cut off from other lands, but a continent that joins to them. If he be compassionate towards the afflictions of others, it shews that his heart is like the noble tree, that is wounded itself when it gives the balm. If he easily pardons and remits offences, it shews that his mind is planted above injuries, so that he cannot be shot. If he be thankful for small benefits it shews that he weighs men's minds, and not their trash. But above all, if he have St. Paul's perfection, that he would wish to be an anathema from Christ for the salvation of his brethren, it shews much of a divine nature, and a kind of conformity with Christ himself.

ESSAY XIV

OF NOBILITY

WE will speak of nobility first as a portion of an estate; then as a condition of particular persons. A monarchy where there is no nobility at all, is ever a pure and absolute tyranny; as that of the Turks. For nobility attempts sovereignty, and draws the eyes of the people somewhat aside from the line royal. But for democracies, they need it not; and they are commonly more quiet and less subject to sedition, than where there are strips of nobles. For men's eyes are upon the business, and not upon the persons; or if upon the persons, it is for the business' sake, as fittest, and not for flags and pedigree. We see the Switzers last well notwithstanding their diversity of religion and of cantons. For utility is their bond, and not respects. The united provinces of the Low countries in their government excel; for where there is an equality, the consultations are more indifferent, and the payments and tributes more cheerful. A great and potent nobility addeth majesty to a monarch, but diminisheth power; and putteth life and spirit into the people, but presseth their fortune. It is well when nobles are not too great for sovereignty, nor for justice; and yet maintained in that height, as the insolency of inferiors may be broken upon them before it come on too fast upon the majesty of kings. A numerous nobility causeth poverty and inconvenience in a state; for it is a surcharge of expense; and besides, it being of necessity that many of the nobility fall in time to be weak in fortune, it maketh a kind of disproportion between honour and means.

As for nobility in particular persons; it is a reverend thing to see an ancient castle or building not in decay, or to see a fair timber-tree sound and perfect: how much more to behold an ancient noble family, which hath stood against the waves and weathers of time. For new nobility is but the act of power; but ancient nobility is the act of time. Those that are first raised to nobility are commonly more virtuous, but less innocent, than their descendants; for there is rarely any rising but by a commixture of good and evil arts. But it is reason the memory of their virtues remain to their posterity, and their faults die with themselves. Nobility of birth commonly abateth industry; and he that is not industrious envieth him that is. Besides,

noble persons cannot go much higher; and he that standeth at a stay, when others rise, can hardly avoid motions of envy. On the other side, nobility extinguisheth the passive envy from others towards them; because they are in possession of honour. Certainly, kings that have able men of their nobility shall find ease in employing them, and a better slide in their business; for people naturally bend to them, as born in some sort to command.

ESSAY XV

OF SEDITIONS AND TROUBLES

SHEPHERDS of people had need know the kalendars of tempests in state; which are commonly greatest when things grow to equality; as natural tempests are greatest about the *Æquinocidia*. And as there are certain hollow blasts of wind and secret swellings of seas before a tempest, so are there in states:

—*Ille etiam cacos instare tumultus
Sæpe monet, fraudesque et operta tumescere bella.*

Libels and licentious discourses against the state, when they are frequent and open; and in like sort, false news, often running up and down, to the disadvantage of the state, and hastily embraced; are amongst the signs of troubles. Virgil, giving the pedigree of Fame, saith she was sister to the Giants:

*Illam Terra parens, irâ irritata Deorum,
Extremam (ut perhibent) Cæo Enceladoque sororem
Progeniit.—*

As if fames were the relics of seditions past; but they are no less, indeed, the preludes of seditions to come. Howsoever, he noteth it right, that seditious tumults and seditious fames differ no more but as brother and sister, masculine and feminine; especially if it come to that, that the best actions of a state, and the most plausible, and which ought to give greatest contentment, are taken in ill sense, and traduced: for that shews the envy great, as Tacitus saith, *Conflatâ magnâ invidiâ, seu bene male gesta premunt*. Neither doth it follow, that because these fames are a sign of troubles, that the suppressing of them with too much severity should be a remedy of troubles. For the despising of them many times checks them best; and the going about to stop them doth but make a wonder long-lived. Also that kind of obedience, which Tacitus speaketh of, is to be held suspected: *Erant in officio, sed tamen qui mallent mandata imperantium interpretari, quam exequi*: disputing, excusing, cavilling upon mandates and directions, is a kind of shaking off the yoke, and assay of disobedience; especially if in those disputings they which are for the direction speak fearfully and tenderly, and those that are against it audaciously.

Also, as Machiavel noteth well, when princes, that ought to be common parents, make themselves as a party, and lean to a side, it is as a boat that is overthrown by uneven weight on the one side; as was well seen in the time of Henry the Third of France; for first himself entered league for the extirpation of the Protestants, and presently after the same league was turned upon himself. For when the authority of princes is made but an accessory to a cause, and that there be other bands that tie faster than the band of sovereignty, kings begin to be put almost out of possession.

Also, when discords and quarrels and factions are carried openly and audaciously, it is a sign the reverence of government is lost. For the motions of the greatest persons in a government ought to be as the motions of the planets under *primum mobile*, according to the old opinion, which is, that every of them is carried swiftly by the highest motion, and softly in their own motion. And therefore, when great ones in their own particular motion move violently, and, as Tacitus expresseth it well, *liberius quam ut imperantium meminissent*, it is a sign the orbs are out of frame. For reverence is that wherewith princes are girt from God, who threateneth the dissolving thereof: *Solvam cingula regum*.

So when any of the four pillars of government are mainly shaken or weakened (which are religion, justice, counsel, and treasure), men had need to pray for fair weather. But let us pass from this part of predictions (concerning which, nevertheless, more light may be taken from that which followeth), and let us speak first of the materials of seditions; then of the motives of them; and thirdly of the remedies.

Concerning the materials of seditions. It is a thing well to be considered; for the surest way to prevent seditions (if the times do bear it) is to take away the matter of them. For if there be fuel prepared, it is hard to tell whence the spark shall come that shall set it on fire. The matter of seditions is of two kinds; much poverty and much discontentment. It is certain, so many overthrown estates, so many votes for troubles. Lucan noteth well that state of Rome before the civil war:

*Hinc usura vorax, rapidumque in tempore fœnus,
Hinc concussa fides, et multis utile bellum.*

This same *multis utile bellum* is an assured and infallible sign of a state disposed to seditions and troubles. And if this poverty and broken estate in the better sort be joined with a want and necessity in the mean people, the danger is imminent and great. For the rebellions of the belly are the worst. As for discontentments, they are in the politic body like to humours in the natural, which are apt to gather a preternatural heat and to inflame. And let no prince meas-

ure the danger of them by this, whether they be just or unjust; for that were to imagine people to be too reasonable, who do often spurn at their own good: nor yet by this, whether the griefs whereupon they rise be in fact great or small; for they are the most dangerous discontentments where the fear is greater than the feeling. *Dolendi modous, timendi non item.* Besides, in great oppressions, the same things that provoke patience, do withal mate the courage; but in fears it is not so. Neither let any prince or state be secure concerning discontentments, because they have been often, or have been long, and yet no peril hath ensued: for as it is true that every vapour or fume doth not turn into a storm; so it is nevertheless true that storms, though they blow over divers times, yet may fall at last; and, as the Spanish proverb noteth well, The cord breaketh at the last by the weakest pull.

The causes and motives of seditions are: innovation in religion; taxes; alteration of laws and customs; breaking of privileges; general oppression; advancement of unworthy persons; strangers; dearths; disbanded soldiers; factions grown desperate; and whatsoever, in offending people, joineth and knitteth them in a common cause.

For the remedies; there may be some general preservatives, whereof we will speak; as for the just cure, it must answer to the particular disease, and so be left to counsel rather than rule.

The first remedy or prevention is to remove by all means possible that material cause of sedition whereof we spake; which is want and poverty in the estate. To which purpose serveth the opening and well-balancing of trade; the cherishing of manufacturers; the banishing of idleness; the repressing of waste and excess by sumptuary laws; the improvement and husbanding of the soil: the regulating of prices of things vendible; the moderating of taxes and tributes; and the like. Generally, it is to be foreseen that the population of a kingdom (especially if it be not mown down by wars) do not exceed the stock of the kingdom which should maintain them. Neither is the population to be reckoned only by number; for a smaller number, that spend more and earn less, do wear out an estate sooner than a greater number, that live lower and gather more. Therefore the multiplying nobility and other degrees of quality, in an over-proportion to the common people, doth speedily bring a state to necessity; and so doth likewise all overgrown clergy, for they bring nothing to the stock; and in like manner, when more are bred scholars than preferments can take off.

It is likewise to be remembered that, forasmuch as the increase of any estate must be upon the foreigner (for whatsoever is somewhere gotten is somewhere lost), there be but three things which one nation selleth unto another: the commodity as nature yieldeth it; the manufacture; and the vecture or carriage. So that if these three wheels

go, wealth will flow as in a spring tide. And it cometh many times to pass that *materiam superabit opus*; that the work and carriage is more worth than the material, and enricheth a state more; as is notably seen in the Low-Countrymen, who have the best mines above ground in the world.

Above all things, good policy is to be used, that the treasure and moneys in a state be not gathered into few hands. For otherwise a state may have a great stock, and yet starve. And money is like muck, not good except it be spread. This is done chiefly by suppressing, or at the least keeping a strait hand upon the devouring trades of usury, engrossing, great pasturages, and the like.

For removing discontentments, or at least the danger of them. There is in every state (as we know) two portions of subjects, the noblesse and the commonalty. When one of these is discontent, the danger is not great; for common people are of slow motion, if they be not excited by the greater sort; and the greater sort are of small strength, except the multitude be apt and ready to move of themselves. Then is the danger, when the greater sort do but wait for the troubling of the waters amongst the meaner, that then they may declare themselves. The poets feign, that the rest of the gods would have bound Jupiter; which he hearing of, by the counsel of Pallas sent for Briareus, with his hundred hands, to come in to his aid. An emblem, no doubt, to shew how safe it is for monarchs to make sure of the good will of common people.

To give moderate liberty for griefs and discontentments to evaporate (so it be without too great insolency or bravery) is safe way. For he that turneth the humours back, and maketh the wound bleed inwards, endangereth malign ulcers and pernicious inpostumations.

The part of Epimetheus mought well become Prometheus, in the case of discontentments; for there is not a better provision against them. Epimetheus, when griefs and evils flew abroad, at last shut the lid, and kept hope in the bottom of the vessel. Certainly, the politic and artificial nourishing and entertaining of hopes, and carrying men from hopes to hopes, is one of the best antidotes against the poison of discontentments. And it is a certain sign of a wise government and proceeding when it can hold men's hearts by hopes, when it cannot by satisfaction; and when it can handle things in such manner, as no evil shall appear so peremptory but that it hath some outlet of hope: which is the less hard to do, because both particular persons and factions are apt enough to flatter themselves, or at least to brave that which they believe not.

Also, the foresight and prevention, that there be no likely or fit head whereunto discontented persons may resort, and under whom they may join, is a known but an excellent point of caution. I understand a fit head to be one that hath greatness and reputation; that

hath confidence with the discontented party, and upon whom they turn their eyes; and that is thought discontented in his own particular: which kind of persons are either to be won and reconciled to the state, and that in a fast and true manner; or to be fronted with some other of the same party, that may oppose them, and so divide the reputation. Generally, the dividing and breaking of all factions and combinations that are adverse to the state, and setting them at distance or at least distrust amongst themselves, is not one of the worst remedies. For it is a desperate case, if those that hold with the preceding of the state be full of discord and faction, and those that are against it be entire and united.

I have noted that some witty and sharp speeches which have fallen from princes have given fire to seditions. Cæsar did himself infinite hurt in that speech, *Sylla nescivit litteras, non potuit dictare*; for it did utterly cut off that hope which men had entertained, that he would at one time or other give over his dictatorship. Galba undid himself by that speech, *Lægi a se militem, non emi*; for it put the soldiers out of hope of the donative. Probus likewise, by that speech, *Si vixero, non opus erit amplius Romano imperio militibus*: a speech of great despair for the soldiers. And many the like. Surely princes had need, in tender matters and ticklish times, to beware what they say; especially in these short speeches, which fly abroad like darts, and are thought to be shot out of their secret intentions. For as for large discourses, they are flat things, and most so much noted.

Lastly, let princes, against all events, not be without some great person, one or rather more, of military valour, near unto them, for the repressing of seditions in their beginnings. For without that, there useth to be more trepidation in court upon the first breaking out of troubles than were fit. And the state runneth the danger of that which Tacitus saith: *Atque is habitus animorum fuit, ut pessimum facinus auderent pauci, plures vellent, omnes paterentur*. But let such military persons be assured, and well reputed of, rather than factious and popular; holding also good correspondence with the other great men in the state; or else the remedy is worse than the disease.

ESSAY XVI

OF ATHEISM

I HAD rather believe all the fables in the Legend, and the Talmud, and the Alcoran, than that this universal frame is without a mind. And therefore God never wrought miracle to convince atheism, because his ordinary works convince it. It is true, that a little philosophy inclineth man's mind to atheism; but depth in philosophy bringeth men's minds about to religion: for while the mind of man looketh upon second causes scattered, it may sometimes rest in them, and go no further; but when it beholdeth the chain of them, confederate and linked together, it must needs fly to Providence and Diety. Nay, even that school which is most accused of atheism doth most demonstrate religion; that is, the school of Leucippus and Democritus and Epicurus. For it is a thousand times more credible, that four mutable elements and one immutable fifth essence, duly and eternally placed, need no God, than that an army of infinite small portions or seeds unplaced should have produced this order and beauty without a divine marshal. The Scripture saith, The fool hath said in his heart, there is no God: it is not said, The fool hath thought in his heart: so as he rather saith it by rote to himself, as that he would have, than that he can thoroughly believe it, or be persuaded of it, For none deny there is a God but those for whom it maketh that there were no God. It appeareth in nothing more, that atheism is rather in the lip than in the heart of man, than by this; that atheists will ever be talking of that their opinion, as if they fainted in it within themselves, and would be glad to be strengthened by the consent of others: nay more, you shall have atheists strive to get disciples as it fareth with other sects: and, which is most of all, you shall have of them that will suffer for atheism, and not recant; whereas, if they did truly think that there were no such thing as God, why should they trouble themselves? Epicurus is charged that he did but dissemble for his credit's sake, when he affirmed there were blessed natures, but such as enjoyed themselves without having respect to the government of the world. Wherein they say he did temporise, though in secret he thought there was no God. But certainly he is traduced; for his words are noble and divine: *Non deos vulgi negare profanum, sed vulgi opiniones diis applicare profanum.* Plato could have said

no more. And although he had the confidence to deny the administration, he had not the power to deny the nature. The Indians of the West have names for their particular gods, though they have no name for God: as if the heathens should have had the names Jupiter, Apollo, Mars, &c., but not the word *Deus*: which shews that even those barbarous people have the notion, though they have not the latitude and extent of it. So that against atheists the very savages take part with the very subtlest philosophers. The contemplative atheist is rare; a Diagoras, a Bion, a Lucian perhaps, and some others; and yet they seem to be more than they are; for all that impugn a received religion, or superstition, are, by the adverse part, branded with the name of atheists. But the great atheists indeed are hypocrites; which are ever handling holy things, but without feeling; so as they must needs be cauterized in the end. The causes of atheism are: divisions in religion, if they be many; for any one main division addeth zeal to both sides, but many divisions introduce atheism. Another is, scandal of priests; when it is come to that which S. Bernard saith: *Non est jam dicere, ut populus, sic sacerdos; quia nec sic populus, ut sacerdos*. A third is, custom of profane scoffing in holy matters, which doth by little and little deface the reverence of religion. And lastly, learned times, specially with peace and prosperity; for troubles and adversities do more bow men's minds to religion. They that deny a God destroy man's nobility; for certainly man is of kin to the beasts by his body; and if he be not kin to God by his spirit, he is a base and ignoble creature. It destroys likewise magnanimity, and the raising of human nature; for take an example of a dog, and mark what a generosity and courage he will put on when he finds himself maintained by a man, who to him is in stead of a god, or *melior natura*; which courage is manifestly such as that creature, without that confidence of a better nature than his own, could never attain. So man, when he resteth and assureth himself upon divine protection and favour, gathereth a force and faith which human nature in itself could not obtain. Therefore, as atheism is in all respects hateful, so in this, that it depriveth human nature of the means to exalt itself above human frailty. As it is in particular persons, so it is in nations: never was there such a state for magnanimity as Rome: of this state hear what Cicero saith: *Quam volumus licet, patres conscripti, nos amemus, tamen nec numero Hispanos, nec robore Gallos, nec calliditate Pœnos, nec artibus Græcos, nec denique hoc ipsos hujus gentis et terræ domestico nativoque sensu Italos ipsos et Latinos; sed pietate, ac religione, atque hoc unâ sapientiâ quod Deorum immortalium num in omnia regi gubernarique persperimus, omnes gentes nationesque superavimus.*

ESSAY XVII

OF SUPERSTITION

It were better to have no opinion of God at all, than such an opinion as is unworthy of him: for the one is unbelief, the other is contumely: and certainly superstition is the reproach of the Diety. Plutarch saith well to that purpose: Surely (saith he) I had rather a great deal men should say there was no such man at all as Plutarch, than that they should say that there was one Plutarch that would eat his children as soon as they were born; as the poets speak of Saturn. And as the contumely is greater towards God, so the danger is greater towards men. Atheism leaves a man to sense, to philosophy, to natural piety, to laws, to reputation; all which may be guides to an outward moral virtue, though religion were not; but superstition dismounts all these, and erecteth an absolute monarchy in the minds of men. Therefore atheism did never perturb states; for it makes men wary of themselves, as looking no further: and we see the times inclined to atheism (as the time of Augustus Cæsar) were civil times. But superstition hath been the confusion of many states, and bringeth in a new *primum mobilie*, that ravisheth all the spheres of government. The master of superstition is the people; and in all superstition wise men follow fools; and arguments are fitted to practice, in a reversed order. It was gravely said by some of the prelates in the Council of Trent, where the doctrine of the schoolmen bare great sway, that the schoolmen were like astronomers, which did feign eccentrics and epicycles, and such engines of orbs, to save the phenomena, though they knew there were no such things; and in like manner, that the schoolmen had framed a number of subtile and intricate axioms and theorems, to save the practice of the church. The causes of superstition are: pleasing and sensual rites and ceremonies; excess of outward and pharisaical holiness; over-great reverence of traditions, which cannot but load the church; the stratagems of prelates for their own ambition and lucre; the favouring too much of good intentions, which openeth the gate to conceits and novelties; the taking an aim at divine matters by human, which cannot but breed mixture of imaginations; and lastly, barbarous times, especially joined with calamities and disasters. Superstition, without a veil, is a deformed thing; for, as it addeth deformity to an ape to be so like a man, so the

similitude of superstition to religion makes it the more deformed. And as wholesome meat corrupteth to little worms, so good forms and orders corrupt into a number of petty observances. There is a superstition in avoiding superstition, when men think to do best if they go furthest from the superstition formerly received: therefore care would be had that (as it fareth in ill purgings) the good be not taken away with the bad; which commonly is done, when the people is the reformer.

ESSAY XVIII

OF TRAVEL

TRAVEL, in the younger sort, is a part of education; in the elder, a part of experience. He that traveleth into a country before he hath some entrance into the language, goeth to school, and not to travel. That young men travel under some tutor, or grave servant, I allow well; so that he be such a one that hath the language and hath been in the country before; whereby he may be able to tell them what things are worthy to be seen in the country where they go; what acquaintances they are to seek; what exercises or discipline the place yieldeth. For else young men shall go hooded, and look abroad little. It is a strange thing that in sea-voyages, where there is nothing to be seen but sky and sea, men should make diaries, but in land-travel, wherein so much is to be observed, for the most part they omit it; as if chance were fitter to be registered than observation. Let diaries, therefore, be brought in use. The things to be seen and observed are: the courts of princes, specially when they give audience to ambassadors; the courts of justice, while they sit and hear causes, and so of consistories ecclesiastic; the churches and monasteries, with the monuments which are therein extant; the walls and fortifications of cities and towns, and so the havens and harbours; antiquities and ruins; libraries; colleges, disputations, and lectures, where any are; shipping and navies; houses and gardens of state and pleasure, near great cities; armories; arsenals; magazines; exchanges; burses; warehouses; exercises of horemanship, fencing, training of soldiers; and the like; comedies, such whereunto the better sort of persons do resort; treasures of jewels and robes; cabinets and rarities; and, to conclude, whatsoever is memorable in the places where they go. After all which the tutors or servants ought to make diligent enquiry. As for triumphs, masques, feasts, weddings, funerals, capital executions, and such shews, men need not to be put in mind of them; yet are they not to be neglected. If you will have a young man to put his travel into a little room, and in short time to gather much, this you must do. First, as was said, he must have some entrance into the language, before he goeth. Then he must have such a servant, or tutor, as knoweth the country, as was likewise said. Let him carry with him also some card or book describing the country where he traveleth;

which will be a good key to his enquiry. Let him keep also a diary. Let him not stay long in one city or town; more or less as the place deserveth, but not long: nay, when he stayeth in one city or town, let him change his lodging from one end and part of the town to another; which is a great adamant of acquaintance. Let him sequester himself from the company of his countrymen, and diet in such places where there is good company of the nation where he travelleth. Let him, upon his removes from one place to another, procure recommendation to some person of quality residing in the place whither he removeth; that he may use his favour in those things he desireth to see or know. Thus he may abridge his travel with much profit. As for the acquaintance which is to be sought in travel; that which is most of all profitable is acquaintance with the secretaries and employed men of ambassadors; for so in travelling in one country he shall suck the experience of many. Let him also see and visit eminent persons in all kinds, which are of great name abroad; that he may be able to tell how the life agreeth with the fame. For quarrels, they are with care and discretion to be avoided: they are commonly for mistresses, healths, place, and words. And let a man beware how he keepeth company with cholerick and quarrelsome persons; for they will engage him into their own quarrels. When a traveller returneth home, let him not leave the countries where he hath travelled altogether behind him, but maintain a correspondence by letters with those of his acquaintance which are of most worth. And let his travel appear rather in his discourse than in his apparel or gesture; and in his discourse, let him be rather advised in his answers than forwards to tell stories; and let it appear that he doth not change his country manners for those of foreign parts, but only prick in some flowers of that he hath learned abroad into the customs of his own country.

ESSAY XIX

OF EMPIRE

It is a miserable state of mind to have few things to desire and many things to fear; and yet that commonly is the case of kings; who, being at the highest, want matter of desire, which makes their minds more languishing; and have many representations of perils and shadows, which makes their minds the less clear. And this is one reason also of that effect which the Scripture speaketh of, That the king's heart is inscrutable. For multitude of jealousies, and lack of some predominant desire that should marshal and put in order all the rest, maketh any man's heart hard to find or sound. Hence it comes likewise that princes many times make themselves desires, and set their hearts upon toys: sometimes upon a building; sometimes upon erecting of an order; sometimes upon the advancing of a person; sometimes upon obtaining excellency in some art or feat of the hand; as Nero for playing on the harp, Domitian for certainty of the hand with the arrow, Commodus for playing at fence, Caracalla for driving chariots, and the like. This seemeth incredible unto those that know not the principle, that of the mind of man is more cheered and refreshed by profiting in small things than by standing at a stay in great. We see also that kings that have been fortunate conquerors in their first years, it being not possible for them to go forward infinitely, but that they must have some check or arrest in their fortunes, turn in their latter years to be superstitious and melancholy; as did Alexander the Great, Dioclesian, and in our memory Charles the Fifth, and others: for he that is used to go forward, and findeth a stop, falleth out of his own favor, and is not the thing he was.

To speak now of the true temper of empire: it is a thing rare, and hard to keep: for both temper and distemper consist of contraries. But it is one thing to mingle contraries, another to interchange them. The answer of Appolonius to Vespasian is full of excellent instruction. Vespasian asked him, What was Nero's overthrow? He answered: Nero could touch and tune the harp well; but in government, sometimes he used to wind the pins too high, sometimes to let them down too low. And certain it is that nothing destroyeth authority so much as the unequal and untimely interchange of power pressed too far, and relaxed too much.

This is true, that the wisdom of all these latter times in princes' affairs is rather fine deliveries and shiftings of dangers and mischiefs when they are near, than solid and grounded courses to keep them aloof. But this is but to try masteries with fortune: and let men beware how they neglect and suffer matter of trouble to be prepared: for no man can forbid the spark, nor tell whence it may come. The difficulties in princes' business are many and great; but the greatest difficulty is often in their own mind. For it is common with princes (saith Tacitus) to will contradictories: *Sunt plerumque regum voluntates vehementes, et inter se contrariæ*. For it is the solecism of power, to think to command the end, and yet not to endure the mean.

Kings have to deal with their neighbors, their wives, their children their prelates or clergy, their nobles, their second-nobles or gentlemen, their merchants, their commons, and their men of war; and from all these arise dangers, if care and circumspection be not used.

First for their neighbors; there can no general rule be given (the occasions are so variable), save one, which ever holdeth; which is, that princes do keep due sentinel, that none of their neighbors do overgrow so (by increase of territory, by embracing of trade, by approaches, or the like) as they become more able to annoy them than they were. And this is generally the work of standing councils to foresee and to hinder it. During that triumvirate of kings, King Henry VIII. of England, Francis the I. King of France, and Charles the V. Emperor, there was such a watch kept, that none of the three could win a palm of ground, but the other two would straightways balance it, either by confederation, or, if need were by a war; and would not in any wise take up peace at interest. And the like was done by that league (which Guicciardine saith was the security of Italy) made between Ferdinando King of Naples, Lorenzious Medices, and Ludovicus Sforza, potentates, the one of Florence, the other of Milan. Neither is the opinion of some of the schoolmen to be received, that a war cannot justly be made but upon a precedent injury or provocation. For there is no question but a just fear of an imminent danger, though there be no blow given, is a lawful cause of a war.

For their wives; there are cruel examples of them. Livia is infamed for the poisoning of her husband; Roxolana, Solyman's wife, was the destruction of that renowned prince, Sultan Mustapha, and otherwise troubled his house and succession; Edward the Second of England his queen had the principal hand in the desposing and murder of her husband. This kind of danger is then to be feared, chiefly, when the wives have plots for the raising of their own children, or else that they be advoutresses.

For their children; the tragedies, likewise, of dangers from them have been many. And generally, the entering of fathers into sus-

picion of their children hath been ever unfortunate. The destruction of Mustapha (that we named before) was so fatal to Solyman's line, as the succession of the Turks, from Solyman until this day, is suspected to be untrue and of strange blood; for that Selymus the Second was thought to be suppositious. The destruction of Crispus, a young prince of rare towardness, by Constantinus the Great, his father, was in like manner fatal to his house; for both Constantinus and Constance, his sons, died violent deaths; and Constantius, his other son, did little better; who died, indeed, of sickness, but after that Julianus had taken arms against him. The destruction of Demetrius, son to Philip the Second of Macedon, turned upon the father, who died of repentance. And many like examples there are; but few or none where the fathers had good by such distrust; except it were where the sons were up in open arms against them; as was Selymus the First against Bajazet; and the three sons of Henry the Second, King of England.

For their prelates; when they are proud and great, there is also danger from them: as it was in the times of Anselmus and Thomas Becket, Archbishops of Canterbury; who with their cro-siers did almost try it with the king's sword; and yet they had to deal with stout and haughty kings, William Rufus, Henry the First, and Henry the Second. The danger is not from that state, but where it hath a dependence of foreign authority; or where the churchmen come in and are elected, not by the collation of the king, or particular patrons, but by the people.

For their nobles; to keep them at a distance, it is not amiss; but to depress them may make a king more absolute, but less safe, and less able to perform anything that he desires. I have noted it in my history of King Henry the Seventh of England, who depressed his nobility; whereupon it came to pass that his times were full of difficulties and troubles; for the nobility, though they continued loyal unto him, yet did they not co-operate with him in his business. So that, in effect, he was fain to do all thing himself.

For their second-nobles; there is not much danger from them, being a body dispersed. They may sometimes discourse high, but that doth little hurt; besides, they are a counterpoise to the higher nobility, that they grow not too potent; and lastly, being the most immediate in authority with the common people, they do best temper popular commotions.

For their merchants; they are *vena porta*; and if they flourish not, a kingdom may have good limbs, but will have empty veins, and nourish little. Taxes and imposts upon them do seldom good to the king's revenue; for that that he wins in the hundred he leeseth in the shire; the particular rates being increased, but the total bulk of trading rather decreased.

For their commons; there is little danger from them, except it be where they have great and potent heads; or where you meddle with the point of religion, or their customs, or means of life.

For their men of war; it is a dangerous state where they live and remain in a body, and are used to donatives; whereof we see examples in the janizaries, and pretorian bands of Rome: but trainings of men, and arming them in several places, and under several commanders, and without donatives, are things of defense, and no danger.

Princes are like to heavenly bodies, which cause good or evil times; and which have much veneration, but no rest. All precepts concerning kings are in effect comprehended in those two remembrances: *Memento quod es homo*, and *Memento quod es Deus*, or *vice Dicu*: the one bridleth their power, and the other their will.

ESSAY XX

OF COUNSEL

THE greatest trust between man and man is the trust of giving counsel. For in other confidences men commit the parts of life; their lands, their goods, their children, their credit, some particular affair; but to such as they make their counsellors, they commit the whole: by how much the more they are obliged to all faith and integrity. The wisest princes need not think it any diminution to their greatness, or derogation to their sufficiency, to rely upon counsel. God himself is not without, but hath made it one of the great names of his Blessed Son; The Counsellor. Salomon hath pronounced that in counsel is stability. Things will have their first or second agitation; if they be not tossed upon the arguments of counsel, they will be tossed upon the waves of fortune, and be full of inconstancy, doing and undoing, like the reeling of a drunken man. Salomon's son found the force of counsel, as his father saw the necessity of it. For the beloved kingdom of God was first rent and broken by ill counsel; upon which counsel there are set, for our instruction, the two marks whereby bad counsel is for ever best discerned: that it was young counsel, for the persons; and violent counsel, for the matter.

The ancient times do set forth in figure both the incorporation and inseperable conjunction of counsel with kings, and the wise and politic use of counsel by kings: the one, in that they say Jupiter did marry Metis, which signifieth counsel; whereby they intend that sovereignty is married to counsel: the other in that which followeth, which was thus: they say, after Jupiter was married to Metis, she conceived by him and was with child; but Jupiter suffered her not to stay till she brought forth, but eat her up; whereby he became himself with child, and was delivered of Pallas armed, out of his head. Which monstrous fable containeth a secret of empire; how kings are to make use of their counsel of state. That first they ought to refer matters unto them, which is the first begetting or impregnation; but when they are elaborate, molded, and shaped in the womb of their counsel, and grow ripe and ready to be brought forth, that then they suffer not their counsel to go through with the resolution and direction, as if it depended on them; but take the

matter back into their own hands, and make it appear to the world that the decrees and final directions (which, because they come forth with prudence and power, are resembled to Pallas armed) proceeded from themselves; and not only from their authority, but (the more to add reputation to themselves) from their head and device.

Let us now speak of the inconveniences of counsel, and of the remedies. The inconveniences that have been noted in calling and using counsel are three. First, the revealing of affairs, whereby they become less secret. Secondly, the weakening of the authority of princes, as if they were less of themselves. Thirdly, the danger of being unfaithfully counselled, and more for the good of them that counsel than of him that is counselled. For which inconveniences, the doctrine of Italy, and practice of France, in some kings' times, hath introduced cabinet counsels; a remedy worse than the disease.

As to secrecy; princes are not bound to communicate all matters with all counsellors, but may extract and select. Neither is it necessary that he that consulteth what he should do, should declare what he will do. But let princes beware that the unsecreting of their affairs comes not from themselves. And as for cabinet counsels, it may be their motto, *Plenus rimarum sum*: one futile person, that maketh it his glory to tell, will do more hurt than many, that know it their duty to conceal. It is true there be some affairs which require extreme secrecy, which will hardly go beyond one or two persons besides the king: neither are those counsels unprosperous; for, besides the secrecy, they commonly go on constantly in one spirit of direction, without distraction. But then it must be a prudent king, such as is able to grind with a hand-mill; and those inward counsellors had need also be wise men, and especially true and trusty to the king's ends; as it was with King Henry the Seventh of England, who in his greatest business imparted himself to none, except it were to Morton and Fox.

For weakening of authority; the fable sheweth the remedy. Nay, the majesty of kings is rather exalted than diminished when they are in the chair of counsel: neither was there ever prince bereaved of his dependences by his counsel, except where there hath been either an over-greatness in one counsellor or an over-strict combination in divers; which are things soon found and holpen.

For the last inconvenience, that men will counsel with an eye to themselves; certainly, *non inveniet fidem super terram* is meant of the nature of times, and not of all particular persons. There be that are in nature faithful, and sincere, and plain, and direct, not crafty and involved; let princes, above all, draw to themselves such natures. Besides, counsellors are not commonly so united, but that

one counsellor keepeth sentinel over another; so that if any do counsel out of faction or private ends, it commonly comes to the king's ear. But the best remedy is, if princes know their counsellors as well as their counsellors know them:

Principis est virtus maxima nosse suos.

And on the other side, counsellors should not be too speculative into their sovereign's person. The true composition of a counsellor is rather to be skilfull in their master's business than in his nature; for then he is like to advise him, and not to feed his humor. It is of singular use to princes if they take the opinions of their counsel both separately and together. For private opinion is more free, but opinion before others is more reverend. In private, men are more bold in their own humors; and in consort, men are more obnoxious to others' humors. Therefore it is good to take both: and of the inferior sort rather in private, to preserve freedom; of the greater rather in consort, to preserve respect. It is in vain for princes to take counsel concerning matters, if they take no counsel likewise concerning persons; for all matters are as dead images, and the life of the execution of affairs resteth in the good choice of persons. Neither is it enough to consult concerning persons *secundum genera*, as in an idea or mathematical description, what the kind and character of the person should be; for the greatest errors are committed, and the most judgment is shown, in the choice of individuals. It was truly said, *Optimi consilarii mortui*: books will speak plain when counsellors blanch. Therefore it is good to be conversant in them, specially the books of such as themselves have been actors upon the stage.

The counsels at this day in most places are but familiar meetings, where matters are rather talked on than debated. And they run too swift to the order or act of counsel. It were better that, in causes of weight, the matter were propounded one day and not spoken to till the next day; *in nocte consilium*. So was it done in the commission of union between England and Scotland, which was a grave and orderly assembly. I commend set days for petitions; for both it gives the suitors more certainty for their attendance, and it frees the meetings for matters of estate, that they may *hoc agere*. In choice of committees for ripening business for the counsel, it is better to choose indifferent persons, than to make an indifferency by putting in those that are strong on both sides. I commend also standing commissions; as for trade, for treasure, for war, for suits, for some provinces; for where there be divers particular counsels, and but one counsel of estate (as it is in Spain), they are, in effect, no more than standing commissions, save that they have greater authority. Let such as are to inform counsels

out of their particular professions (as lawyers, seamen, mintmen, and the like) be first heard before committees; and then, as occasion serves, before the counsel. And let them not come in multitudes, or in a tribunitious manner; for that is to clamor counsels, not to inform them. A long table and a square table, or seats about the walls, seem things of form, but are things of substance; for at a long table a few at the upper end, in effect, sway all the business; but in the other form there is more use of the counsellors' opinions that sit lower. A king, when he presides in counsel, let him beware how he opens his own inclination too much in that which he propoundeth; for else counsellors will but take the wind of him, and instead of giving free counsel, sing him a song of *placibo*.

ESSAY XXIII

OF WISDOM FOR A MAN'S SELF

AN ant is a wise creature for itself, but it is a shrewd thing in an orchard or garden. And certainly men that are great lovers of themselves waste the public. Divide with reason between self-love and society; and be so true to thyself, as thou be not false to others, specially, to thy king and country. It is a poor center of a man's action, himself. It is right earth. For that only stands fast upon his own center; whereas all things that have affinity with the heavens move upon the center of another, which they benefit. The referring of all to a man's self is more tolerable in a sovereign prince; because themselves are not only themselves, but their good and evil is at the peril of the public fortune. But it is a desperate evil in a servant to a prince, or a citizen in a republic. For whatsoever affairs pass such a man's hands, he crooketh them to his own ends; which must needs be often eccentric to the ends of his master or state. Therefore let princes, or states, chooses such servants as have not this mark; except they mean their service should be made but the accessary. That which maketh the effect more pernicious is that all proportion is lost. It were disproportion enough for the servant's good to be preferred before the master's; but yet it is a greater extreme, when a little good of the servant shall carry things against a great good of the master's. And yet that is the case of bad officers, treasurers, ambassadors, generals, and other false and corrupt servants; which set a bias upon their bowl, of their own petty ends and envies, to the overthrow of their master's great and important affairs. And for the most part, the good such servants receive is after the model of their own fortune; but the hurt they sell for that good is after the model of their master's fortune. And certainly it is the nature of extreme self-lovers, as they will set an house on fire, and it were but to roast their eggs; and yet these men many times hold credit with their masters, because their study is but to please them and profit themselves; and for either respect they will abandon the good of their affairs.

Wisdom for a man's self is, in many branches thereof, a depraved thing. It is the wisdom of rats, that will be sure to leave a house somewhat before it fall. It is the wisdom of the fox, that thrusts

out the badger, who digged and made room for him. It is the wisdom of crocodiles, that shed tears when they would devour. But that which is specially to be noted is, that those which (as Cicero says of Pompey) are *sui amantes sine rivali*, are many times unfortunate. And whereas they have all their time sacrificed to themselves, they become in the end themselves sacrifices to the inconstancy of fortune, whose wings they thought by their self-wisdom to have pinioned.

ESSAY XXIV

OF INNOVATIONS

As the births of living creatures at first are ill-shapen, so are all innovations, which are the births of time. Yet notwithstanding, as those that first bring honor into their family are commonly more worthy than most that succeed, so the first precedent (if it be good) is seldom attained by imitation. For ill, to man's nature as it stands perverted, hath a natural motion, strongest in continuance; but good, as a forced motion, strongest at first. Surely every medicine is an innovation; and he that will not apply new remedies must expect new evils: for time is the greatest innovator; and if time of course alter things to the worse, and wisdom and counsel shall not alter them to the better, what shall be the end? It is true, that what is settled by custom, though it be not good, yet at least it is fit. And those things which have long gone together are as it were confederate within themselves: whereas new things piece not so well; but though they help by their utility, yet they trouble by their inconformity. Besides, they are like strangers, more admired and less favored. All this is true, if time stood still; which contrariwise moveth so round, that a forward retention of custom is as turbulent a thing as an innovation; and they that reverence too much old times are but a scorn to the new. It were good therefore that men in their innovations would follow the example of time itself, which indeed innovateth greatly, but quietly and by degrees scarce to be perceived: for otherwise, whatsoever is new is unlooked for; and ever it mends some, and pairs other: and he that is holpen takes it for a fortune, and thanks the time; and he that is hurt, for a wrong, and imputeth it to the author. It is good also not to try experiments in states, except the necessity be urgent, or the utility evident; and well to beware that it be the reformation that draweth on the change, and not the desire of change that pretendeth the reformation. And lastly, that the novelty, though it be not rejected, yet be held for a suspect; and, as the Scripture saith, that we make a stand upon the ancient way, and then look about us, and discover what is the straight and right way, and so to walk in it.

ESSAY XXV

OF DISPATCH

AFFECTED dispatch is one of the most dangerous things to business that can be. It is like that which the physicians call pre-digestion, or hasty digestion, which is sure to fill the body full of crudities and secret seeds of diseases. Therefore measure not dispatch by the times of sitting, but by the advancement of the business. And as in races it is not the large stride or high lift that makes the speed; so in business, the keeping close to the matter, and not taking of it too much at once, procureth dispatch. It is the care of some only to come off speedily for the time, or to contrive some false periods of business, because they may seem men of dispatch. But it is one thing to abbreviate by contracting, another by cutting off: and business so handled at several sittings or meetings goeth commonly backward and forward in an unsteady manner. I knew a wise man that had it for a by-word, when he saw men hasten to a conclusion: Stay a little, that we may make an end the sooner.

On the other side, true dispatch is a rich thing. For time is the measure of business, as money is of wares; and business is bought at a dear hand where there is small dispatch. The Spartans and Spaniards have been noted to be of small dispatch: *Mi venga la muerte de Spanga*; Let my death come from Spain; for then it will be sure to be long in coming.

Give good hearing to those that give the first information in business; and rather direct them in the beginning than interrupt them in the continuance of their speeches: for he that is put out of his own order will go forward and backward, and be more tedious while he waits upon his memory than he could have been if he had gone on in his own course. But sometimes it is seen that the moderator is more troublesome than the actor.

Iterations are commonly loss of time: but there is no such gain of time as to iterate often the state of the question; for it chaseth away many a frivolous speech as it is coming forth. Long and curious speeches are as fit for dispatch, as a robe or mantle with a long train is for race. Prefaces, and passages, and excusations, and other speeches of reference to the person, are great wastes of time;

and though they seem to proceed of modesty, they are bravery. Yet beware of being too material, when there is any impediment or obstruction in men's wills; for preoccupation of mind ever requireth preface of speech; like a formentation to make the unguent enter.

Above all things, order, and distribution, and singling out of parts, is the life of dispatch; so as the distribution be not too subtile: for he that doth not divide will never enter well into business; and he that divideth too much will never come out of it clearly. To choose time is to save time; and an unseasonable motion is but the beating the air. There be three parts of business: the preparation, the debate or examination, and the perfection. Whereof, if you look for dispatch, let the middle only be the work of many, and the first and last the work of few. The proceeding upon somewhat conceived in writing doth for the most part facilitate dispatch: for though it should be wholly rejected, yet that negative is more pregnant of direction than an indefinite; as ashes are more generative than dust.

ESSAY XXVI

OF SEEMING WISE

It hath been an opinion that the French are wiser than they seem, and the Spaniards seem wiser than they are. But howsoever it be between nations, certainly it is so between man and man. For as the Apostle saith of godliness, Having a shew of godliness, but denying the power thereof; so certainly there are in point of wisdom and sufficiency that do nothing or little very solemnly: *magno conatu nugas*. It is a ridiculous thing and fit for a satire to persons of judgment, so see what shifts these formalists have, and what prospectives to make superficies to seem body that hath depth and bulk. Some are so close and reserved as they will not shew their wares but by a dark light, and seem always to keep back somewhat; and when they know within themselves they speak of that they do not well know, would nevertheless seem to others to know of that which they may not well speak. Some help themselves with countenance and gesture, and are wise by signs; as Cicero saith of Piso, that when he answered him he fetched one of his brows up to his forehead, and bent the other down to his chin: *Respondes, altero ad frontem sublato, altero ad mentum depresso supercilio, crudelitatem tibi non placere*. Some think to bear it by speaking a great word and being peremptory; and go on, and take by admittance that which they cannot make good. Some, whatsoever is beyond their reach, will seem to despise or make light of it as impertinent or curious; and so would have their ignorance seem judgment. Some are never without a difference, and commonly by amusing men with a subtilty blanch the matter; of whom A. Gellius saith, *hominem delirum, qui verborum minutiis rerum fragit pondera*. Of which kind also Plato, in his *Protagoras*, bringeth in Prodicus in scorn, and maketh him make a speech that consisteth of distinctions from the beginning to the end. Generally, such men in all deliberations find ease to be of the negative side, and affect a credit to object and foretell difficulties: for when propositions are denied, there is an end of them; but if they be allowed, it requireth a new work: which false point of wisdom is the bane of business. To conclude, there is no decaying merchant, or inward beggar, hath so many tricks to uphold the credit of their wealth, as these empty persons have to maintain the credit of their sufficiency. Seeming wise men may make shift to get opinion: but let no man choose them for employment; for certainly you would better take for business a man somewhat absurd than over-formal.

ESSAY XXVII

OF FRIENDSHIP

It had been hard for him that spake it to have put more truth and untruth together in a few words, than in that speech, Whosoever is delighted in solitude is either a wild beast or a god. For it is most true that a natural and secret hatred and aversion towards society, in any man, hath somewhat of the savage beast; but it is most untrue that it should have any character at all of the divine nature; except it proceed, not out of a pleasure in solitude, but out of a love and desire to sequester a man's self for a higher conversation: such as is found to have been falsely and feignedly in some of the heathen: as Epimenides the Candian, Numa the Roman, Empedocles the Sicilian, and Apollonius of Tyana; and truly and really in divers of the ancient hermits and holy fathers of the church. But little do men perceive what solitude is, and how far it extendeth. For a crowd is not company, and faces are but a gallery of pictures, and talk but a tinkling cymbal, where there is no love. The Latin adage meeteth with it a little, *Magna civitas, magna solitudo*; because in a great town friends are scattered; so that there is not that fellowship, for the most part, which is in less neighborhoods. But we may go further and affirm most truly, that it is a mere and miserable solitude to want true friends, without which the world is but a wilderness; and even in this sense also of solitude, whosoever in the frame of his nature and affections is unfit for friendship, he taketh it of the beast, and not from humanity.

A principal fruit of friendship is the ease and discharge of the fulness and swellings of the heart, which passions of all kinds do cause and induce. We know diseases of stoppings and suffocations are the most dangerous in the body; and it is not much otherwise in the mind: you may take sarza to open the liver, steel to open the spleen, flowers of sulphur for the lungs, castoreum for the brain; but no recipe openeth the heart, but a true friend, to whom you may impart griefs, joys, fears, hopes, suspicions, counsels, and whatsoever lieth upon the heart to oppress it in a kind of civil shrift or confession.

It is a strange thing to observe how high a rate great kings and

monarchs do set up this fruit of friendship whereof we speak: so great, as they purchase it many times at the hazard of their own safety and greatness. For princes, in regard of the distance of their fortune from that of their subjects and servants, cannot gather this fruit, except (to make themselves capable thereof) they raise some persons to be as it were companions and almost equals to themselves, which many times sorteth to inconvenience. The modern languages give unto such persons the name of favorites, or *privados*; as if it were matter of grace, or conversation. But the Roman name attaineth the true use and cause thereof, naming them *participes curarum*; for it is that which tieth the knot. And we see plainly that this hath been done, not by weak and passionate princes only, but by the wisest and most politic that ever reigned; who have ofentimes joined to themselves some of their servants, whom both themselves have called friends, and allowed others likewise to call them in the same manner, using the word which is received between private men.

L. Sylla, when he commanded Rome, raised Pompey (after surnamed the Great) to that height, that Pompey vaunted himself for Sylla's overmatch. For when he had carried the consulship for a friend of his, against the pursuit of Sylla, and that Sylla did a little resent thereat, and began to speak great, Pompey turned upon him again, and in effect bade him be quiet; for that more men adored the sun rising than the sun setting. With Julius Cæsar, Decimus Brutus had obtained that interest, as he set him down in his testament for heir in remainder after his nephew. And this was the man that had power with him to draw him forth to his death. For when Cæsar would have discharged the senate, in regard of some ill presages, and specially a dream of Calpurnia, this man lifted him gently by the arm out of his chair, telling him he hoped he would not dismiss the senate till his wife had dreamt a better dream. And it seemeth his favor was so great, as Antonius, in a letter which is recited *verbatim* in one of Cicero's *Philippics*, calleth him *venefica*, "witch"; as if he had enchanted Cæsar. Augustus raised Agrippa (though of mean birth) to that height, as, when he consulted with Mæcenâs about the marriage of his daughter Julia, Mæcenâs took the liberty to tell him, that he must either marry his daughter to Agrippa, or take away his life; there was no third way, he had made him so great. With Tiberius Cæsar, Sejanus had ascended to that height, as they two were termed and reckoned as a pair of friends. Tiberius in a letter to him saith, *Hæc pro amicitia nostrâ non occultavi*; and the whole senate dedicated an altar to Friendship, as to a goddess, in respect of the great dearness of friendship between them two. The like or more was between Septimius Severus and Plautianus. For he forced his eld-

est son to marry the daughter of Plautianus; and would often maintain Plautianus in doing affronts to his son; and did write also in a letter to the senate by these words: I love the man so well, as I wish he may over-live me. Now if these princes had been as a Trajan, or a Marcus Aurelius, a man might have thought that this had proceeded of an abundant goodness of nature; but being men so wise, for such strength and severity of mind, and so extreme lovers of themselves, as all these were, it proveth most plainly that they found their own felicity (though as great as ever happened to mortal men) but as an half piece, except they mought have a friend to make it entire: and yet, which is more, they were princes that had wives, sons, nephews; and yet all these could not supply the comfort of friendship.

It is not to be forgotten, what Commineus observeth of his first master, Duke Charles the Hardy; namely, that he would communicate his secrets with none; and least of all, those secrets which troubled him most. Whereupon he goeth on and saith, that towards his latter time that closeness did impair and a little perish his understanding. Surely Commineus mought have made the same judgment also, if it had pleased him, of his second master, Lewis the Eleventh, whose closeness was indeed his tormentor. The parable of Pythagoras is dark, but true; *Cor ne edito*, "Eat not the heart." Certainly, if a man would give it a hard phrase, those that want friends to open themselves unto are cannibals of their own hearts. But one thing is most admirable (wherewith I will conclude this first fruit of friendship), which is, that this communicating of a man's self to his friend works two contrary effects; for it redoubleth joys, and cutteth griefs in halves. For there is no man that imparteth his joys to his friend, but he joyeth the more; and no man that imparteth his griefs to his friend, but he grieveth the less. So that it is in truth of operation upon a man's mind, of like virtue as the alchymists use to attribute to their stone for man's body; that it worketh all contrary effects, but still to the good and benefit of nature. But yet, without praying in aid of alchymists, there is a manifest image of this in the ordinary course of nature. For in bodies, union strengtheneth and cherisheth any natural action; and, on the other side, weakeneth and dulleth any violent impression: and even so is it of minds.

The second fruit of friendship is healthful and sovereign for the understanding, as the first is for the affections. For friendship maketh indeed a fair day in the affections, from storm and tempests; but it maketh daylight in the understanding, out of darkness and confusion of thoughts. Neither is this to be understood only of faithful counsel, which a man receiveth from his friend; but before you come to that, certain it is that whosoever hath his mind

fraught with many thoughts, his wits and understanding do clarify and break up, in the communicating and discoursing with another: he tosseth his thoughts more easily; he marshalleth them more orderly; he seeth how they look when they are turned into words; finally, he waxeth wiser than himself; and that more by an hour's discourse than by a day's meditation. It was well said by Themistocles to the king of Persia, that speech was like cloth of Arras, opened and put abroad; whereby the imagery doth appear in figure; whereas in thoughts they lie but as in packs. Neither is this second fruit of friendship, in opening the understanding, restrained only to such friends as are able to give a man counsel: (they indeed are best); but even without that, a man learneth of himself, and bringeth his own thoughts to light, and whetteth his wits as against a stone, which itself cuts not. In a word, a man were better relate himself to a statue or picture, than to suffer his thoughts to pass in smother.

Add now, to make this second fruit of friendship complete, that other point, which lieth more open, and falleth within vulgar observation; which is faithful counsel from a friend. Heraclitus saith well in one of his enigmas, Dry light is ever the best. And certain it is that the light that a man receiveth by counsel from another is drier and purer than that which cometh from his own understanding and judgment; which is ever infused and drenched in his affections and customs. So as there is as much difference between the counsel that a friend giveth, and that a man giveth himself, as there is between the counsel of a friend and of a flatterer. For there is no such flatterer as is a man's self; and there is no such remedy against flattery of a man's self as the liberty of a friend. Counsel is of two sorts; the one concerning manners, the other concerning business. For the first; the best preservative to keep the mind in health is the faithful admonition of a friend. The calling of a man's self to a strict account is a medicine, sometime, too piercing and corrosive. Reading good books of morality is a little flat and dead. Observing our faults in others is sometimes improper for our case. But the best receipt (best, I say, to work, and best to take) is the admonition of a friend. It is a strange thing to behold what gross errors and extreme absurdities many (especially of the greater sort) do commit, for want of a friend to tell them of them, to the great damage both of their fame and fortune. For, as St. James saith, they are as men, that look sometimes into a glâss, and presently forget their own shape and favor. As for business, a man may think, if he will, that two eyes see no more than one; or that a gamester seeth always more than a looker-on; or that a man in anger is as wise as he that hath said over the four and twenty letters; or that a musket may be shot off as well upon

the arm as upon a rest; and such other fond and high imaginations, to think himself all in all. But when all is done, the help of good counsel is that which setteth business straight. And if any man think that he will take counsel, but it shall be by pieces; asking counsel in one business of one man, and in another business of another man; it is well (that is to say, better perhaps than if he asked none at all); but he runneth two dangers. One, that he shall not be faithfully counselled; for it is a rare thing, except it be from a perfect and entire friend, to have counsel given, but such as shall be bowed and crooked to some ends which he hath that giveth it. The other, that he shall have counsel given, hurtful and unsafe (though with good meaning), and mixed partly of mischief and partly of remedy: even as if you would call a physician, that is thought good for the cure of the disease you complain of, but is unacquainted with your body; and therefore may put you in way for a present cure, but overthroweth your health in some other kind; and so cure the disease and kill the patient. But a friend that is wholly acquainted with a man's estate will beware, by furthering any present business, how he dasheth upon other inconvenience. And therefore rest not upon scattered counsels; they will rather distract and mislead than settle and direct.

After these two noble fruits of friendship (peace in the affections, and support of the judgment) followeth the last fruit, which is like the pomegranate, full of many kernels; I mean aid and bearing a part in all actions and occasions. Here the best way to represent to life the manifold use of friendship is to cast and see how many things there are which a man cannot do himself; and then it will appear that it was a sparing speech of the ancients, to say, that a friend is another himself: for that a friend is far more than himself. Men have their time, and die many times in desire of some things which they principally take to heart; the bestowing of a child, the finishing of a work, or the like. If a man have a true friend, he may rest almost secure that the care of those things will continue after him. So that a man hath as it were two lives in his desires. A man hath a body, and that body is confined to a place; but where friendship is, all offices of life are as it were granted to him and his deputy. For he may exercise them by his friend. How many things are there which a man cannot, with any face or comeliness, say or do himself! A man can scarce allege his own merits with modesty, much less extol them; a man cannot sometimes brook to supplicate or beg; and a number of the like. But all these things are graceful in a friend's mouth, which are blushing in a man's own. So again, a man's person hath many proper relations which he cannot put off. A man cannot speak to his son but

as a father; to his wife but as a husband; to his enemy but upon terms: whereas a friend may speak as the case requires, and not as it sorteth with the person. But to enumerate these things were endless: I have given the rule, where a man cannot fitly play his own part: if he have not a friend, he may quit the stage.

ESSAY XXVIII

OF EXPENSE

RICHES are for spending, and spending for honor and good actions. Therefore extraordinary expense must be limited by the worth of the occasion; for voluntary undoing may be as well for a man's country as for the kingdom of heaven. But ordinary expense ought to be limited by a man's estate; and governed with such regard, as it be within his compass; and not subject to deceit and abuse of servants; and ordered to the best show, that the bills may be less than the estimation abroad. Certainly, if a man will keep but of even hand, his ordinary expenses ought to be but to the half of his receipts; and if he think to wax rich, but to the third part. It is no baseness for the greatest to descend and look into their own estate. Some forbear it, not only negligence alone, but doubting to bring themselves into melancholy, in respect they shall find it broken. But wounds cannot be cured without searching. He that cannot look into his own estate at all, had need both choose well those whom he employeth, and change them often; for new are more timorous and less subtile. He that can look into his estate but seldom, it behooveth him to turn all to certainties. A man had need, if he be plentiful in some kind of expense, to be as saving again in some other. As, if he be plentiful in diet, to be saving in apparel; if he be plentiful in the hall, to be saving in the stable; and the like. For he that is plentiful in expenses of all kinds will hardly be preserved from decay. In clearing of a man's estate, he may as well hurt himself in being too sudden, as in letting it run on too long. For hasty selling is commonly as disadvantageable as interest. Besides, he that clears at once will relapse; for finding himself out of straits, he will revert to his customs: but he that cleareth by degrees induceth a habit of frugality, and gaineth as well upon his mind as upon his estate. Certainly, who hath a state to repair may not despise small things: and commonly it is less dishonorable to abridge petty charges, than to stoop to petty gettings. A man ought warily to begin charges which once begun will continue: but in matters that return not he may be more magnificent.

THE ESSAYES OF MICHAEL LORD OF MONTAIGNE

(Michael De Montaigne, French essayist was born in castle of Montaigne, 1533. After receiving his schooling at Bordeaux he studied law and in 1554, was made councillor in the Parliament of Bordeaux. Resigning, he returned to castle of Montaigne where he wrote his famous "Essays." He then travelled extensively, through Switzerland, Germany and Italy from where, he was recalled to become Mayor of Bordeaux. He died in 1592.)

The Thirde Booke

CHAPTER I

OF PROFIT AND HONESTY

No man living is free from speaking foolish things; the ill lucke is, to speake them curiously:

Nā iste magno conatu magnas nugas dixerit.

Ter. Heaut. act. iv. sc. i.

This fellow sure with much a doe,
Will tell great tales and trifles too.

That concerneth not me; mine slip from me with as little care, as they are of smal worth: whereby they speed the better. I would suddenly quit them, for the least cost were in them: Nor do I buy, or sell them, but for what they weigh. I speake unto Paper, as to the first man I meete. That this is true, marke well what followes. To whom should not treachery be detestable, when Tiberius refused it on such great interest? One sent him word out of Germany, that if he thought it good, Ariminus should be made away by poison. He was the mightiest enemy the Romans had, who had so vilely used them under Varus, and who onely empeached the encrease of his domination in that country. His answer was; that the people of Rome were accustomed to be revenged on their enemies by open courses, With weapons in hand; not by subtill sleights, nor in hugger mugger; thus left he the profitable for the honest. He was (you will say) a cosener. I beleeve it; that's no wonder; in men of his profession. But the confession of vertue, is of no lesse consequence in his mouth that hateth

the same, forsomuch as truth by force doth wrest it from him, and if he will not (admit) it in him, at least, to adorne himselfe he will put it on. Our composition, both publike and private, is full of imperfection; yet is there nothing in nature unserviceable, no not inutility it selfe; nothing thereof hath beene insinuated in this huge universe, but holdeth some fit place therein. Our essence is cymented with crased qualities; ambition, jealousie, envy, revenge, superstition, dispaire, lodge in us, with so naturall a possession, as their image is also discerned in beasts: yea and cruelty, so unnaturall a vice: for in the midst of compassion, we inwardly feele a kinde of bitter-sweet-pricking of malicious delight, to see others suffer; and children feele it also:

*Suave mari magno turbantibus æquora ventis,
E terra magnum alterius spectare laborem.*

Lucr. ii. 1.

'Tis sweet on graund seas, when windes waves turmoyle,
From land to see an others greevous toyle.

The seed of which qualities, who should roote out of man, should ruine the fundamental conditions of our life: In matters of policy likewise; some necessary functions are not onely base, but faulty: vices find therein a seate, and employ themselves in the stitching up of our frame; as poysons in the preservations of our health. If they become excusable, because wee have neede of them, and that common necessity effaceth their true property; let us resigne the acting of this part to hardy Citizens, who sticke not to sacrifice their honours and consciences, as those of old, their lives, for their Countries availe and safety. We that are more weake, had best assume taskes of more ease and less hazard. The Common-wealth requireth some to betray, some to lie, and some to massaker: leave we that commission to people more obedient and more pliable. Truly, I have often beene vexed, to see our judges, by fraude or false hopes of favour or pardon, draw on a malefactor, to bewray his offence; employing therein both cousenage and impudencie. It were fit for justice, and Plato himselfe, who favoureth this custome, to furnish me with meanes more sutable to my humour. 'Tis a malicious justice, and in my conceit no less wounded by it selfe, than by others. I answered not long since, that hardly could I betray my Prince for a particular man, who should be very sory to betray a particular man for my Prince. And loath not onely to deceive, but that any be deceived in me; whereto I will neither furnish matter nor occasion. In that little busines I have managed betweene our Princes, amid the divisions and subdivisions, which at this day so teare and turmoile us, I have curiously heeded, that they mistake me not, nor muffled themselves in any maske. The professors

of that trade hold themselves most covert; pretending and counterfeiting the greatest indifference and neerness to the cause they can. As for me, I offer my selfe in my liveliest reasons, in a forme most mine owne: A tender and young Negotiator, and who had rather faile in my businesse, then in my selfe. Yet hath this been hitherto with so good hap (for surely fortune is in these matters a principal actor) that few have dealt betwene party and party with lesse suspition, and more inward favour. I have in all my proceedings an open fashion, easie to insinuate and give it selfe credit at first acquaintance. Sincerity, plainnesse, and naked truth, in what age soever, finde also their opportunitie and employment. Besides, their liberty is little called in question, or subject to hate, who deale without respect of their owne interest. And they may truely use the answer of Hyperides unto the Athenians, complaining of his bitter invectives and sharpeness of his speech: Consider not, my masters whether I am free, but whether I be so, without taking ought, or bettering my state by it. My liberty also hath easily discharged me from all suspition of faintnesse, by it's vigor (nor forbearing to speake any thing, though it bit or stung them; I could not have said worse in their absence) and because it carrieth an apparant show of simplicity and carelesnesse. I pretend no other fruit by negotiating, then to negotiate; and annex no long pursuites or propositions to it. Every action makes his particular game, win he if he can. Nor am I urged with the passion of love or hate unto great men; nor is my wil shackled with anger, or particular respect. I regard our Kings with an affection simply lawfull, and meerely civil, neither mooved nor unmoov'd by private interest: for which I like my selfe the better. The generall and just cause bindes me no more than moderately, and without violent fits. I am not subject to these piercing pledges and inward gages. Choller and hate are beyond the duty of justice, and are passions fitting only those, whose reason is not sufficient to hold them to their duty: *Utatur motu animi, qui uti ratione non potest*, Let him use the motion of his minde, that cannot use reason. All lawfull intentions are of themselves temperate: if not, they are altered into sedicious and unlawful. It is that makes me march every where with my head aloft, my face and heart open. Verily (and I feare not to avouch it) I could easily for a neede, bring a candle to Saint Michaell, and another to his Dragon, as the good old woman. I will follow the best side to the fire, but not into it, if I can choose. If neede require, let Montaigne my Mannor-house be swallowed up in the publike ruine: but if there be no such necessity, I will acknowledge my selfe beholding unto fortune if she please to save it; and for it's safety employ as much scope as my endeavours can afford me. Was it not Atticus, who cleaving to the right (but loosing side) saved himselfe by his moderation, in that generall Shipwracke of the world, amidst so many

changes and divers alterations? To private men, such as he was, it is more easie. And in such kinde of businesse, I thinke one dealeth justly, not to be too forward to insinuate or invite himselfe: To hold a staggering or middle course, to beare an unmooved affection, and without inclination in the troubles of his country, and publike divisions, I deeme neither seemely nor honest: *Ea non media, sed nulla via est, velut eventum expectantium, quo fortunæ consilia sua applicant*, That is not the mid-way, but a mad way, or no way, as of those that expect the event with intent to apply their dessignes as fortune shall fall out. That may be permitted in the affaires of neighbours. So did Gelon the tyrant of Siracusa suspend his inclination in the Barbarian wars against the Greekes, keeping Ambasdours at Delphos, with presents, to watch on what side the victory would light, and to apprehend the fittest occasion of reconcilment with the victors. It were a kind of treason to do so in our owne affaires and domesticall matters, wherein of necessity one must resolve and take a side; but for a man that hath neither charge, nor expresse commandement to urge him; not to busie or entermidle himselfe therein, I holde it more excusable: (Yet frame I not this excuse for my selfe) then in foraine and strangers wars, wherewith according to our laws, no man is troubled against his will. Neverthelesse those, who wholly ingage themselves into them, may carry such an order and temper, as the storme (without offending them) may glide over their head. Had wee not reason to hope as much of the deceased Bishop of Orleans, Lora of Morvilliers? And I know some, who at this present worthily bestirre themselves, in so even a fashion or pleasing a manner, that they are likely to continue on foote, whatsoever injurious alteration or fall, the heavens may prepare against us. I holde it onely fit for Kings to be angry with Kings: And mocke at those rash spirits, who from the braverie of their hearts offer themselves to so unproportionate quarrels. For one undertaketh not a particular quarrell against a Prince, in marching against him openly and couragiously, for his honour, and according to his duty: If hee love not such a man: hee doth better: at least hee esteemeth him. And the cause of lawes especially, and defence of the auncient state, hath ever found this priviledge, that such as for their owne interest, disturbe the same, excuse (if they honour not) their defendors. But wee ought not terme duty (as now a dayes wee do) a sower rigour, and intestine crabbednesse, proceeding of private interest and passions: nor courage a treacherous and malicious proceeding. Their disposition to frowardnesse and mischief, they entitle Zeale: That's not the cause doth heate them, 'tis their owne interest: They kindle a warre, not because it is just, but because it is warre. Why may not a man beare himselfe betweene enemies featly and faithfully? Does it, if not altogether with an equall (for it may admit different measure) at

least with a sober affection, which may not so much engage you to the one, that he looke for al at your hands. Content your selfe with a moderate proportion of their favour, and to glide in troubled waters without fishing in them. Th' other manner of offering ones uttermost endeavours to both sides, implyeth lesse discretion then conscience. What knows he to whom you betray another, as much your friend as himselfe, but will do the like for him, when his turne shall come? He takes you for a villaine: whilst that hee heares you, and gathers out of you, and makes his best use of your disloyalty. For double fellows are only beneficiall in what they bring, but we must looke, they carry away as little as may be. I carry nothing to the one, which I may not (having opportunity) say unto the other, the accent only changed a little: and report either but indifferent or knowne, or common things. No benefit can induce mee to lye unto them: what is entrusted to my silence I conceale religiously, but take as little in trust as I can. Princes secrets are a troublesome charge, to such as have nought to do with them. I ever by my good will capitulate with them, that they trust mee with very little: but let them assuredly trust what I disclose unto them. I always knew more then I wold. An open speach opens the way to another, and draws all out, even as Wine, and Love. Philippedes in my minde, answered King *Lysimachus* wisely, when hee demaunded of him, what of his wealth or state hee should empарт unto him: *Which and what you please* (quoth hee) so it be not your secrets. I see every one mutine, if another conceale the deapth or mysterie of the affaires from him, wherein he pleaseth to employ him, or have but purloyned any circumstance from him. For my part, I am content one tell me no more of his businesse then he will have me know or deale in; nor desire I, that my knowledge exceede or straine my word. If I must needs be the instrument of cozinage, it shall at least be with safety of my conscience. I will not be esteemed a servant, nor so affectionate, nor yet so faithfull, that I be judged fit to betray any man. Who is unfaithfull to himselfe, may be excused if hee be faithlesse to his Master. But Princes entertaine not men by halves, and despise bounded [and] conditionall service. What remedy? I freely tell them my limits; for, a slave I must not be but unto reason, which yet I cannot compasse: And they are to blame, to exact from a free man, the like subjection unto their service, and the same obligation, which they may from those they have made and bought; and whose fortune dependeth particularly and expresly on theirs. The lawes have delivered mee from much trouble: they have chosen mee a side to followe, and appointed mee a maister to obey: all other superiority and duty, ought to bee relative unto that, and bee restrained. Yet may it not be concluded, that if my affection should otherwise transport mee, I would presently afforde my helping hand unto it. Will

and desires are a lawe to themselves, actions are to receive it of publike institutions: All these proceedings of mine, are somewhat dissonant from our formes. They should produce no great effects, nor holde out long among us. Innocencie it selfe could not in these times nor negotiate without dissimulation, nor trafficke without lying. Neither are publike functions of my diet; what my profession requires thereto, I furnish in the most private manner I can. Being a childe, I was plunged into them up to the ears, and had good successe; but I got loose in good time. I have often since shunned medling with them, seldome accepted and never required; ever holding my back toward ambition; but if not as rowers, who goe forward as it were backward: Yet so, as I am lesse beholding to resolution, then to my good fortune, that I was not wholly embarked in them. For, there are courses lesse against my taste, and more comfortable to my carriage, by which if heretofore it had called mee to the service of the common-wealth, and my advancement unto credit in the world: I know that in following the same I had exceeded the reason of my conceite. Those which commonly say against my profession, that what I terme liberty, simplicity and plainenesse in my behaviour, is arte, cunning and subtilty: and rather discretion, then goodnesse; industry then nature; good wit, then good hap; doe mee more honour, then shame. But truly they make my cunning overcunning. And whosoever hath traced mee and nearely looked into my humours, Ile loose a good wager if hee confesse not, that there is no rule in their schoole, could, a midde such crooked pathes and divers windings, square and raport this naturall motion, and maintain an apparence of liberty and licence, so equall and inflexible; and that all their attention and wit, is not of power to bring them to it. The way to trueth is but one and simple; that of particular profit and benefit of affaires a man hath in charge, double, uneven and accidentall. I have often seene these counterfet and artificiall liberties in practice, but most commonly without successe. They savour of *Æsopes* Asse: who in emulation of the dogge, layde his two fore-feete very jocondly upon his masters shoulders: but looke how many blandishments the prety dogge received, under one, so many bastinadoes where redoubled upon the poore Asses backe. *Id maxime quemque decet: quod est cujusque suum maxime* (Civ. Off. i.): that becomes every man especially, which is his owne especially: I will not deprive cousinage of her ranke, that were to understand the world but ill: I know it hath often done profitable service, it supporteth, yea and nourisheth the greatest part of mens vacations.

There are some lawfull vices: as many actions, or good or excusable, unlawfull. Justice in it selfe naturall and universall is otherwise ordered, and more nobly distributed, then this other especiall, and

nationall justice, restrained and suted to the neede of our pollicie: *Veri juris germanæque justitiæ solidam et expressam effigiem nullam tenemus: umbra et imaginibus utimur* (Cic. Off. iii). Wee have no lively nor life-like purtraiture of upright law and naturall justice: wee use but the shaddowes and colours of them. So that wise *Dandamys*, hearing the lives of *Socrates*, *Pythagoras* and *Diogenes* repeated, in other things, judged them great and worthy men, but overmuch subjected to the reverence of the lawes: which to authorize and second, true vertue is to decline very much from his naturall vigor: and not onely by their permission, but perswasions divers vicious actions are committed and take place. *Ex Senatus consultiis plebisque scitis scelera exercentur*. Even by decrees of counsell, and by statute-laws are mischiefes put in practise. I follow the common phrase, which makes a difference between profitable and honest things: terming some naturall actions which are not onely profitable but necessary, dishonest and filthy. But to continue our examples of treason. Two which aspired unto the kingdome of *Thrace*, were falne into controversie for their right. The Emperor hindred them from falling together by the eares: the one under colour of contriving some friendly accord by an enterview inviting the other to a feast in his house, imprisoned and murthred him. Justice required, that the Romanes should be satisfied for their outrage: some difficulties empeached the ordinary course. What they could not lawfully doe without warre and hazard, they attempted to accomplish by treason: what they could not honestly atchieve, they profitably compassed. For exployting whereof, *Pomponius Flaccus* was thought most fitte: who trayning the fellow into his Nettes by fained wordes and sugred assurances; in liew of the favour and honour hee promised him, sent him bound hand and foote to *Rome*. One traytor overreached another, against common custome: For, they are all full of distrust, and 'tis very hard to surprise them in their own arte: witnesse the heavy and dismall experience we have lately felt of it. Let who liste bee *Pomponius Flaccus*; and there are too-too many that will bee so. As for my part, both my word and faith, are as the rest; pieces of this common body: their best effect is the publicke service: that's ever presupposed with mee. But as, if one should command mee to take the charge of the Rolles or Recordes of the Pallace, I would answer: I have no skill in them: or to bee a leader of Pioners, I would say; I am called to a worthier office: Even so, who would goe about to employ mee, nor to murther or poyson, but to lye, betraye, and forswear my selfe, I would tell him; If I have robbed or stolne any thing from any man, send mee rather to the Gallies. For, a Gentleman may lawfully speake as did the Lacedemonians, defeated by *Antipater*, upon the points of their agreement: You may impose as heavy burdens, and harmefull taxes upon us as you please; but you lose your time, to command us

any shameful or dishonest things. Every man should give himselfe the oath, which the Ægyptian Kings, solemnly and usually presented to their judges; Not to swarve from their consciences, what command soever they should receive from themselves to the contrary. In such commissions there is an evident note of ignominie and condemnation. And whosoever gives them you, accuseth you; and if you conceive them right, gives you them as a trouble and burthen. As much as the publike affaires amend by your endeavours, your owne empaireth: the better you do, so much the worse doe you. And it shall not bee newe, nor peradventure without shadowe of justice, that hee who setteth you a worke, becometh your ruine. If treason bee in any case excusable, it is onely then, when 'tis employed to punish and betray treason. Wee shall finde many treacheries, to have beene not refused, but punished by them, in whose favour they were undertaken. Who knowes not the sentence of *Fabritius*, against *Pyrrus* his Physition? And the commander hath often severely revenged them on the partie he employed in them, refusing so unbridled a credite and power, and disavowing so lewde and so vile an obedience. *Jaropelc* Duke of *Russia*, solicited an Hungarian Gentleman, to betraye *Boleslaus* King of *Polonia*, in contriving his death, or furnishing the Russians with meanes to work him some notable mischiefe. This gallant, presently bestirres him in it, and more then ever applying himselfe to the Kings service obtained to bee of his counsell, and of those hee most trusted. By which advantages, and with the opportunity of his masters absence, hee betrayed *Vicilia*, a great and rich citie to the Russians: which was whollie sakt and burnt by them, with a generall slaughter, both of the inhabitans, of what sexe or age soever, and a great number of nobility thereabouts, whom to that purpose he had assembled. *Jaropelc* his anger thus asswaged with revenge, and his rage mitigated (which was not without pretext, for *Boleslaus* had mightily wronged and in like manner incensed him) and gluttred with the fruite of treason, examining the uglinesse thereof, naked and alone, and with impartiall eyes beholding the same, not distempered by passion, conceived such a remorse, and tooke it so to heart, that hee forthwith caused the eyes of his instrumentall executioner to be pulled out, and his tongue and privy parts to be cut off. *Antigonus* perswaded the *Argyraspides* soldiers, to betray *Eumenes* their generall, and his adversarie, unto him, whom when they had delivered, and he had caused to be slaine; himselfe desired to be the Commissary of divine justice, for the punishment of so detestable a trecherie: and resigning them into the hands of the Governor of the Province, gave him expresse charge, in what manner soever it were, to rid himselfe of them, and bring them to some mischievous end. Whereby, of that great number they were, not one ever after sawe the smoake of *Macedon*. The better they served his turne, the more wicked hee judged them,

and the more worthie of punishment. The slave that betrayed the corner wherein his master *P. Sulpicius* lay hid, was set at liberty, according to the promise of *Syllas* proscription: but according to the promise of common reason, being freed, hee was throwne head-long from off the *Tarpeyan* rocke. And *Clovis* King of *France*, in lieu of the golden armes he had promised the three servants of *Caunacre*, caused them to be hanged, after they had by his sollicitation betraide their maister unto him. They hang them up with the purse of their reward about their neckes. Having satisfied their second and speciall faith, they also satisfie the generall and first. *Mahomet* the second, desirous to rid himselfe of his brother (through jealousie of rule, and according to the stile of that race) employed one of his officers in it; who stifled him, by much water powred downe his throate all at once: which done, in expiation of the fact, he delivered the murtherer into the hands of his brothers mother (for they were brethren but by the fathers side) shee, in his presence, opened his bosome, and with hir owne revenging handes searching for his heart pluckt it out, and cast it unto dogges to eate. Even unto vile dispositions (having made use of a filthy action) it is so sweete and pleasing, if they may with security, as it were, in way of recompence and holy correction, sowe one sure stitch of goodnesse, and justice unto it. Besides; they respect the ministers of such horrible crimes, as people, that still upbraide them with them, and covet by their deaths to smother the knowledge, and cancell the testimony of their practices. Now if perhaps, not to frustrate the publike neede of that last and desperate remedy, one rewarde you for it: yet, hee who doth it (if hee bee not as bad himselfe) will hould you a most accursed and execrable creature. And deemeth you a greater traytor, then he whom you have betrayed: for with your owne handes, hee touched the lewdnesse of your disposition, without disavowing, without object. But employeth you, as we do out-cast persons in the executions of justice: an office as profitable as little honest. Besides the basenesse of such commissions, there is in them a prostitution of conscience. The daughter of *Sejanus*, could not in *Rome*, by any true formall course of lawe, bee put to death, because shee was a virgine: that lawes might have their due course, shee was first deflowred by the common hangman, and then strangled. Not his hand onely, but his soule is a slave unto publike commodity. When *Amurath* the first, to agravate the punishment of his subjects, who had given support unto his sons unnaturall rebellion; appointed their neerest kinsmen to lend their hands unto this execution: I finde it verie honest in some of them, who rather chose unjustly to bee held guiltie of another's parricide, then to serve justice with their owne. And whereas in some paltrie townes forced in my time, I have seene base varlets for savegarde of their owne lives, yeild to hang their friends and companions, I ever thought them of worse condition, then such as were

hanged. It is reported, that *Witoldus* Prince of *Lituania*, introduced an order with that nation, which was that the party condemned to die, should with his owne handes make himselfe away; finding it strange, that a third man being guiltlesse of the fact, shoulde bee employed and charged to commit a murther. When an urgent circumstance, or any violent and unexpected accident, induceth a Prince for the necessitie of his estate, or as they say for state matters, to breake his worde and faith, or otherwise forceth him out of his ordinary duty, he is to ascribe that necessity unto a lash of Gods rod: It is no vice, for hee hath quit his reason, unto a reason more publike, and more powerfull, but surely 'tis ill fortune. So that to one, who asked mee what remedy? I replyde, none; were hee truely rackt betweene these two extreames (*Sed videat ne quærat latebra periurio* (Cic. Off. iii.). But let him take heede he seeke not a starting hole for perjurie) hee must have done it: but if hee did it sans regret, or scruple, if it greeved him not to doe it, 'tis an argument his conscience is but in ill tearmes. Now were there any one of so tender or cheverell a conscience, to whome no cure might seeme worthy of so extreame a remedy: I should prise or regard him no whit the lesse. Hee cannot loose himselfe more handsomely nor more excusable. Wee cannot doe every thing, nor bee in every place. When all is done, thus and thus, must wee often, as unto our last Anker and sole refuge, resigne the protection of our vessell unto the onely conduct of heaven. To what juster necessity can hee reserve himself? What is lesse possible for him to do, then what he cannot effect, without charge unto his faith, and imputation to his honour? things which peradventure should bee dearer to him, then his owne salvation, and the safety of his people. When with enfoulded armes hee shall devoutly call on God for his ayde, may he not hope, for his fatherlie mercie shall not refuse the extraordinary favour, and sinne-forgiving grace of his all powerfull hand, unto a pure and righteous hand? They are dangerous examples, rare and crased exceptions to our naturall rules: wee must yelde unto them, but with great moderation, and heedie circumspection. No private commodity, may any way deserve wee should offer our conscience this wrong: the common-wealth may, when it is most apparant and important. *Timoleon* did fitlie warrant and warde the strangenes of his exploite by the teares hee shed, remembring it was with a brotherlie hand hee slew the tyrant. And it neerely pinched his selfe gnawne conscience, that hee was compelled to purchase the common good, at the rate of his honestie. The sacred Senate it selfe, by his meanes delivered from thraldome, durst not definitively decide of so haughtie an action, and rend in two so urgent and different semblances. But the Siracusans having opportunely and at that very instant sent to the Corinthians, to require their protection, and a governor able to re-establish their towne in former majestie, and de-

liver *Sicilie* from a number of pettie tyrants, which grievously oppressed the same: they appointed *Timolcon*, with this new caveat and declaration: That according as hee should well or ill demeane himselfe in his charge, their sentence should incline, either to grace him as the redeemer of his country, or disgrace him, as the murtherer of his brother. This fantastickall conclusion, hath some excuse upon the danger of the example, and importance of an act so different, and they did well, to discharge their judgement of it, or to embarke him some where else, and on their considerations. Now the proceedings of *Timolcon* in his renowned journie did soone yeelde his cause the cleerer, so worthily and vertuously did hee every way beare himselfe therein. And the good hap, which ever accompanied him in the encombrances and difficulties hee was to subdue in the atchievement of his noble enterprise, seemed to bee sent him by the Gods, conspiring to second, and consenting to favour his justification: This mans end is excusable, if ever any could bee. But the encrease and profit of the publike revenues, which served the Roman Senate for a pretext of the ensuing-foule conclusion I purpose to relate, is not of sufficient force to warrant such injustice. Certaine cities had by the order and permission of the Senate, with mony purchased their libertie, at the hands of *L. Sylla*. The matter comming in question againe, the Senate condemned them, to be fineable and taxed as before: and the mony they had employed for their ransome, should bee deemed as lost and forfeited. Civill warres do often produce such enormous examples: That we punish private men, forsomuch as they have beleevd us, when wee were other then now wee are. And one same magistrate doth lay the penalty of his change on such as cannot do withal. The Schoolemaster whippeth his scholler for his docility, and the guide striketh the blinde man he leadeth. A horrible image of justice. Some rules in Philosophy are both false and faint. The example proposed unto us of respecting private utility before faith given, hath not sufficient power by the circumstance they adde unto it. Theeves have taken you, and on your oath to pay them a certaine sum of money, have set you at liberty againe: They erre, that say, an honest man is quit of his worde and faith without paying, beeing out of their hands; There is no such matter. What feare and danger hath once forced mee to will and consent unto, I am bound to will and performe being out of danger and feare. And although it have but forced my tongue, and not my will, yet am I bound to make my worde good, and keepe my promise. For my part, when it hath sometimes unadvisedly over-runne my thought, yet have I made a conscience to disavowe the same. Otherwise wee should by degrees come to abolish all the right a third man taketh and may challenge of our promises. *Quasi verò forti viro vis possit adhiberi* (Cic. Off. iii.). As though any force could be used upon a valiant man. 'Tis onely lawfull for

our private interest to excuse the breache of promise, if wee have rashlie promised things in themselves wicked and unjust. For, the right of virtue ought to over-rule the right of our bond. I have heretofore placed *Epaminondas* in the first ranke of excellent men, and now recant it not. Unto what high pitch raised hee the consideration of his particular duty? who never slew man hee had vanquished; who for that unvaluable good of restoring his country hir liberty, made it a matter of conscience, to murder a Tryant or his complices, without a due and formall course of lawe: and who judged him a bad man, how good a citizen soever, that amongst his enemies and in the fury of a battle, spared not his friend, or his hoste. Loe here a minde of a rich composition. Hee matched unto the most violent and rude actions of men, goodnesse and courtesie, yea and the most choise and delicate, that may be found in the schoole of Philosophie. This so high-raised courage, so swelling and so obstinate against sorow, death and povertie, was it nature or arte, made it relent, even to the utmost straine of exceeding tendernesse and debonarety of complexion? Being cloathed in the dreadfull livery of steele and blood, hee goeth on crushing an brusing a nation, invincible to all others, but to himselfe: yet mildely relentheth in the midst of a combat or confusion, when he meets with his host or with his friend. Verily, this man was deservedly fit to command in warre, which in the extremest furie of his innated rage, made him to feele the sting of courtesie, and remorse of gentlenesse: then when all inflamed, it foamed with furie, and burned with murder. 'Tis a miracle, to be able to joyne any shew of justice with such actions. But it only belongeth to the unmatched courage of *Epaminondas*, in that confused plight, to joyne mildnesse and facility of the most gentle behaviour that ever was, unto them, yea and pure innocency it selfe. And whereas one told the *Mamertins*, that statutes were of no force against armed men: another to the Tribune of the people, that the time of justice and warre, were two: a third, that the confused noise of warre and clangor of armes, hindred him from understanding the sober voice of the lawes: This man was not so much as empeached from conceiving the milde sound of civilitie and kindnesse. Borrowed hee of his enemies the custome of sacrificing to the muses (when he went to the warres) to qualifie by their sweetnesse and mildnesse, that martiall furie, and hostile surlinesse? Let us not feare, after so great a master, to hold that some things are unlawfull, even against our fellest enemies: that publike interest, ought not to challenge all of all, against private interest: *Manente memoria etiam in dissidio publicorum fœderum privati juris*; Some memorie of private right continuing even in disagreement of publike contracts.

No power hath so great might,
To make friends still goe right.

And that all things be not lawfull to an honest man, for the service of his King, the generall cause and defence of the lawes. *Non enim patria præstat omnibus officiis, et ipsi conducit pios habere cives in parentes* (Cic. Off. iii.). For our country is not above all other duties: it is good for the country to have her inhabitants use pietie toward their parents. 'Tis an instruction befitting the times: wee need not harden our courages with these plates of iron and steele; it sufficeth our shoulders be armed with them: it is enough to dippe our pens in inke, too much, to die them in blood. If it be greatnesse of courage, and th' effect of a rare and singular vertue, to neglect friendship, despise private respects and bonds; ones word and kindred, for the comon good and obedience of the Magistrate: it is verily able to excuse us from it, if we but allege, that it is a greatnesse unable to lodge in the greatnesse of *Epaminondas* his courage. I abhorre the enraged admonitions of this other unruly spirit.

—*dum tela micant, non vos pietatis imago
Ulla, nec adversa conspecti fronte parentes
Commoveant, vultus gladio turbante verendos.*
Lucan. vii. 320. Cæs.

While swords are brandisht, let no shew of grace
Once moove you, nor your parents face to face,
But with your swords disturbe their reverend grace.

Let us bereave wicked, bloodie and traiterous dispositions, of this pretext of reason: leave we that impious and exorbitant justice, and adhere unto more humane imitations, Oh what may time and example bring to passe! In an encounter of the civil warres against *Cinna*, one of *Pompeyes* souldiers, having unwittingly slaine his brother, who was on the other side, through shame and sorrow presently killed himselfe; And some yeeres after, in another civill warre of the said people, a souldier boldly demanded a reward of his Captaines for killing his owne brother. Falsely doe wee argue honour, and the beautie of an action, by it's profit: and conclude as ill, to thinke every one is bound unto it, and that it is honest, if it be commodious.

All things alike to all
Do not well-fitting fall.

Choose we out the most necessary and most beneficiall matter of humane society, it will be a marriage: yet is it, that the *Saints* counsell findeth and deemeth the contrary side more honest, excluding from it the most reverend vocation of men: as wee to our races assigne such beasts as are of least esteeme.

CHAPTER II

OF THE INCOMMODITIE OF GREATNESSE

SINCE we cannot attaine unto it, let us revenge ourselves with railing against it: yet is it not absolute railing, to finde fault with any thing: There are defects found in all things, how faire soever in show, and desirable they be. It hath generally this evident advantage, that when ever it pleaseth it will decline, and hath well-nigh the choise of one and other condition. For a man doth fall from all heights; divers there are, whence a man may descend without falling. Verily, me seemeth, that we value it at too high a rate: and prize over-deare the resolution of those, whom we have either seen or heard, to have contemned, or of their owne motion rejected the same. Her essence is not so evidently commodious, but a man may refuse it without wonder. Indeed I finde the labour very hard in suffering of evils; but in the contentment of a meane measure of fortune, and shunning of greatnesse, therein I see no great difficulty. In my conceit, it is a vertue, whereunto my selfe, who am but a simple ninny, might easily attaine, and without great contention. What shall they doe, who would also bring into consideration, the glory, which accompanieth this refusall, wherein may fall more ambition, then even in the desire and absolute enjoying of greatnesse? For somuch as ambition is never better directed according to it selfe, then by a straying and unfrequented path. I sharpen my courage toward patience, and weaken the same against desire. I have as much to wish for as another, and leave my wishes as much liberty and indiscretion: but yet, it never came into my minde, to wish for Empire, for Royalty or eminency of high and commanding fortunes. I aime not that way: I love my selfe too well. When I thinke to grow, It is but meanly; with a forced and coward advancement; fit for me: yea in resolution, in wisdom, in health, in beauty, and also in riches. But this credite, this aspiring reputation, this overswaying authority, suppresseth my imagination. And cleane opposite to some other, I should peradventure love my selfe better, to be the second or third man in *Perigot*, then the first in *Paris*: At least, without fainting, I had rather be the third man in *Paris*, then the first in charge. I will neither contend with an Usher of a doore, as a silly unknownen man; nor with gaping and adoration make a Lane through the throng as I passe. I am enured

to a meane calling; mediocrity best fitteth me, as well by my fortune, as by mine own humor. And have shewed by the conduct of my life and course of my enterprises, that I have rather sought to avoid, then otherwise to embrace beyond the degree of fortune that at my birth it pleased God to call me unto. Each naturall constitution, is equally just and easie. My minde is so dull and slowe, that I measure not good fortune according to her height, but rather according to her facility. And if my hart be not great enough, it is ratably free and open, and who biddeth me, bouldly to publish my weaknesse. Should any will me, on the one part, to conferre and consider the life of L. Thurius Balbus, a worthy gallant man, wise, faire, goodly, healthy, of good understanding, richly-plentious in all maner of commodities and pleasures, leading a quiet easefull life, altogether his owne, with a minde armed, and well prepared against death, superstition, griefes, cares and other encombrances of humane necessity; dying in his old age, in an honourable battell, with his weapons in his hand, for the defence of his countrie; and on the other side the life of M. Regulus, so high and great, as all men know, together with his admirable and glorious end: the one unmentioned and without dignity, the other exemplare and wonderfully renounced: truly I would say what Cicero saith of it, had I the gift of well-speaking as hee had. But if I were to sute them unto mine, I would also say, that the former is as much agreeing to my quality, and to the desire I endeavour to conforme my quality unto, as the second is farre beyond it. That to this I cannot attaine but by veneration; and to the other I would willingly attaine by custome. But returne we to our temporall greatnesse, whence we have digressed. I am distasted of all mastry, both active and passive. Otanes one of the seaven that by right might challenge the Crowne, or pretend the Kingdome of *Persia*, resolved upon such a resolution as I should easily have done the like: which was, that he utterly renounced all maner of claime he might in any sort pretend unto that crowne, to his fellow competitores, were it either by election or chance: alwayes provided that both himselfe and all his, might live in that Empire, free from all subjections, and exempted from all maner of commandement, except that of the ancient lawes: and might both challenge all liberty, and enjoy all immunities, that should not prejudice them: being as impacient to command, as to be commanded. The sharpest and most difcile profession of the world, is (in mine opinion) worthily to act and play the King. I excuse more of their faults, then commonly other men doe: and that in consideration of the downe-bearing waight of their immense charge, which much astonisheth me: It is a very hard task to keep a due measure, in so unmeasurable a power. Yet is it, that even with those, that are of a lesse excellent nature, it is a singular incitation to vertue. to be seated in such a place, where you shall doe no maner of good, that is not

registred and recorded: And where the least wel-dooing extendeth to so many persons: And where your sufficiency (as that of Preachers) is principally directed to the people; a weake and partiall judge, easily to be beguiled, and easie to be pleased. There are but few things, of which we may give a sincere judgement: for there be very few, wherein in some sort or other, we are not particularly interested. Superiority and inferiority, maistry and subjection, are joyntly tied unto a naturall kinde of envy and contestation; they must perpetually enter-spoile one another. I believe neither the one nor the other, concerning hir companions rights: let us suffer reason to speake of it, which is inflexible and impassible, when or how we shall make an end. I was not long since reading of two Scottish bookes striving upon this subject. The popular makes the King to be of worse condition then a Carter: and he that extolleth Monarchy, placeth him both in power and sovereignty, many steps above the Gods. Now the incommodity of greatnesse, which here I have undertaken to note and speake of, (upon some occasion lately befallne mee) is this. There is peradventure nothing more pleasing to the commerce of men, then the Essayes, which we through jealousie of honour or valour, make one against another, be it in the exercise of the body or mind: wherein soveraigne greatnesse, hath no true or essential part. Verily, it hath often seemed unto me, that through over much respect, Princes are therein used disdainefully and treated injuriously: For, the thing whereat (in my youth) I was infinitely offended, was, that those which were trained and schooled with mee, should forbear to doe it in good earnest, because they found me unworthy to bee withstood or to resist their endeavours. It is that we dayly see to happen unto them; every man finding himselfe unworthy to force himselfe against them. If one perceive them never so little affected to have the victory, there is none but will strive to yeeld it them, and that will not rather wrong his glory, then offend theirs: No man imployeth more diligence then needs he must to serve their honour. What share have Princes in the throng, where all are for them? Mee thinks I see those Paladines of former ages, presenting themselves in joustes, tiltings and combats, with bodies and armes enhanced. Brisson running against Alexander, counterfeited his course: Alexander chid him for it: but he would have caused him to be whipt. For this consideration, was Carneades wont to say, that Princes children learn't nothing aright but to manage and ride horses; forsomuch as in all other exercises, every man yeeldeth, and giveth them the victory: but a horse who is neyther a flatterer nor a Courtier, will as soone throw the child of a King as the son of a base porter. Homer hath beene forced to consent that Venus (so sweet a saint and delicate a Goddess) should be hurt at the siege of Troy, thereby to ascribe courage and hardinesse unto her qualities never seen in those that

are exempted from danger. The Gods themselves are fained to be angry, to feare, to be jealous, to grieve, to shew passion, and be subject to mortall sense, thereby to honour them with the vertues which the Poets and Philosophers invent amongst us: Nay, they are supposed to runne away, and to have a feeling of all our imperfections. Who doth not participate both hazard and difficulties, cannot justly pretend interest in the honor, or challenge share in the pleasure, that followeth dangerous actions or hazardous attempts. It is pittie a man should be so powerfull, that all things must yeeld and give place unto him. Such as are in so high eminency of greatnesse, their fortune rejects society and conversation too farre from them; she placeth them in over remote and uncouth places. This easefull life and plausible facility to bring all under, and subject mens mindes, is an enemy to all manner of pleasure. It is a kinde of sliding, and not a going: It is to sleepe, and not to live. Conceive man accompanied with omnipotency, you overhelme him: he must in begging manner crave some empeachment and resistance of you. His being and his good, is in want and indigence. Their good qualities are dead and lost: for, they are not heard but by comparison, and they are excluded: they have little knowledge of true praise, being beaten with so continuall and uniforme an approbation. Have they to doe with the simplest of their subjects? they have no meane to take advantage of him, if he but say; It is because he is my King, he supposeth to have sufficiently expressed, and you must understand, that in so saying, he hath lent a helping hand to overthrowe himselfe. This quality suppresseth and consumeth all other true and essential qualities: they are even drowned in the Royalty; which gives them no leave, to make the offices of their charge to prevaile, except in such actions as directly concerne and stead the same. To be a King, is a matter of that consequence, that onely by it he is so. That strange glimmernig and eye-dazeling light, which round about environeth, overcasteth and hideth from us: our weake sight is thereby bleared and dissipated, as beeing filled and obscured by that greater and further-spredding brightnessse. The Senate allotted the honor and prise of eloquence unto Tiberius; he refused it, supposing that if it hath beene true, he could not revenge himselfe of so limited and partiall judgement. As we yeeld Princes all advantages of honor, so we authorize their defects and sooth-up their vices: not onely by approbation, but also by imitation. All Alexanders followers bare their heads sidelings, as he did. And such as flattered Dionysius, in his owne presence did run and justle one another, and either stumbled at, or over-threw what ever stood before their feete, to inferre; that they were as short-sighted or spur-blinde, as he was. Naturall imperfections have sometimes served for commendations and favour. Nay I have seen deafnesse affected. And because

the maister hated his wife, Plutarch hath seen courtiers to sue a divorce of theirs, whom they loved very well. And which is more, paillardise and all maner of dissolution hath thereby beene held in credit; as also disloyalty, blasphemy, cruelty, heresie, superstition, irreligion, wantonnesse and worse, if worse may be. Yea by an example more dangerous, then that of Mithridates his flatterers, who for somuch as their master pretended to have skill in phisick and aspired to the honor of a good Physition, came to him to have their members incized and cauterized. For these others suffer to have their soules cauterized; a much more precious and nobler part then the body. But to end where I began: Adrian the Emperor debating with Favorinus the Philosopher about the interpretation of some word; Favorinus did soone yeeld the victory unto him, his friends finding fault with him for it; you but jest, my masters (quoth he) would not you have him to be much wiser then I, who hath the absolute command over thirty legions? Augustus writ some verses against Asinius Pollio, which Pollio hearing, he said, I will hould my peace; for, it is no wisdom to contend in writing with him, who may proscribe. And they had reason: For Dionysius, because he could not equall Philoxenus in Poesie, nor match Plato in discourse, condemned the one to the stone-quarries, and sent the other to be sold as a slave in the Ile *Ægina*.

CHAPTER III

HOW ONE OUGHT TO GOVERNE HIS WILL

IN regard of the common sort of men, few things touch me, or (to speake properly) sway me: For it is reason they touch, so they possesse-us not. I have great neede, both by study and discourse, to encrease this privilege of insensibilitie, which is naturally crept farre into me. I am not wedded unto many things, and by consequence, not passionate of them. I have my sight cleare, but tied to few objects: My senses delicate and gentle; but my apprehension and application hard and dull: I engage my selfe with difficulty. As much as I can, I employ my selfe wholly to my selfe. And in this very subject, I would willingly bridle and uphold my affection, lest it be too farre plunged therein; Seeing it is a Subject I possesse at the mercy of others, and over which fortune hath more interest then my selfe. So as even in my health, which I so much esteeme, it were requisite not to desire, nor so carefully to seeke it, as thereby I might light upon intollerable diseases. We must moderate our selves. betwixt the hate of paine, and the love of pleasure. Plato sets downe a means course of life betweene both. But to affections that distract me from my selfe, and divert me elsewhere; surely, to such I oppose my selfe with all my force. Mine opinion is, that one should lend himselfe to others, and not give himselfe but to himselfe. Were my wil easie to engage or apply it selfe, I could not continue: I am over tender both by nature and custome,

Fugax rerum, securaque inotia natus.

OVID. *Trist. iii. El. ii. 9.*

Avoiding active businesse,
And borne to secure idlenesse.

Contested and obstinate debates, which in the end would give mine adversarie advantage, the issue which would make my earnest pursuit ashamed, would perchance torment mee cruelly. If I vexed as other men, my soule should never have strength to beare th' alaroms and emotions, that follow such as embrace much. She would presently be displaced by this intestine agitation. If at any time I have beene urged to the managing of strange affaires, I have promised to under-

take them with my hand, but not with my lungs and liver; to charge, and not to incorporate them into me, to have a care, but nothing at all to be over passionate of them: I looke to them, but I hatch them not. I worke enough to dispose and direct the domesticall troubles within mine owne entrailes and veines, without harbouring, or importune my selfe with any forraine employments: And am sufficiently interested with my proper, naturall and essentiall affaires, without seeking other businesses. Such as know how much they owe to themselves; and how many offices of their owne they are bound to performe, shall finde that nature hath given them this commission fully ample and nothing idle. Thou hast business enough within thy selfe, therefore stray not abroad: Men give themselves to hire. Their faculties are not their own, but theirs to whom they subject themselves; their inmates, and not themselves, are within them. This common humor doth not please me. We should thriftily husband our mindes liberty, and never engage it but upon just occasions, which if we judge impartially, are very few in number. Looke on such as suffer themselves to be transported and swayed, they doe it every where. In little as well as in great matters; to that which concerneth, as easie as to that which toucheth them not. They thrust themselves indifferently into all actions, and are without life, if without tumultuary agitation. *In negotiis sunt, negotii causa.* They are busie that they may not be idle, or else in action for actions sake. They seeke worke but to be working. It is not so much because they will goe, as for that they cannot stand still. Much like to a rowling-stone, which never stayeres untill it come to a lying place. To some men, employment is a marke of sufficiencie and a badge of dignity. Their spirits seeke rest in action, as infants repose in the cradle. They may be said, to be as serviceable to their friends, as importunate to themselves. No man distributes his mony to others but every one his life and time. We are not so prodigall of any thing, as of those whereof to be covetous would be both commendable and profitable for us. I follow a cleane contrary course, I am of another complexion: I stay at home and looke to my selfe. What I wish-for, I commonly desire the same but mildely, and desire but little: so likewise I seldome employ and quietly embusie my selfe. What ever they intend and act, they do it with all their will and vehemency. There are so many dangerous steps, that for the more security, wee must somewhat slightly and superficially slide through the world, and not force it. Pleasure it selfe is painefull in it's height.

—*incedis per ignes,
Subpositos cineri doloso.*

HOR *Car. ii. Od. 1. 7.*

You passe through fire (though unafraid)
Under deceitful ashes laid.

The towne counsell of *Bourdeaux* chose me Maior of their City, being farre from *France*, but further from any such thought. I excused my selfe and would have avoided it. But they told mee I was to blame; the more, because the Kings commandement was also employed therein. It is a charge, should seeme so much the more goodly, because it hath neither fee nor reward, other then the honour in the execution. It lasteth two yeares, but may continue longer by a second election, which seldome hapneth. To me it was, and never had been but twice before: Some yeares past the Lord of *Lansac*; and lately to the Lord of *Biron*, Marshall of *France*. In whose place I succeeded; and left mine to the Lord of Matigon, likewise Marshall of *France*. Glorious by so noble an assistance.

Uterque bonus pacis bellicue minister.
Both, both in peace and warre,
Right serviceable are.

Fortune would have a share in my promotion by this particular circumstance, which shee of her owne added thereunto; not altogether vaine. For Alexander disdained the Corinthian Ambassadors, who offered him the freedom and Burgeoise of their Citie, but when they told him that Bacchus and Hercules were likewise in their registers, hee kindly thanked them and accepted their offer. At my first arrivall, I faithfully disciphred and conscientiously displaid my selfe, such as I am indeede: without memorie, without diligence, without experience and without sufficiencie, so likewies without hatred, without ambition, covetousnesse and without violence: that so they might be duly instructed what service they might, or hope, or except at my hands. And forsomuch as the knowledge they had of my deceased father, and the honour they bare unto his memory, had mooved them to chuse me to that dignitie, I told them plainly, I should be verie sorie, that any (thing) should worke such an opinion in my will, as their affaires and Citie had done in my fathers, while he held the said government, whereunto they had called me. I remembered to have seene him, being an infant, and he an old man, his minde cruelly turmoiled with the publike toile, forgetting the sweet aire of his owne house, whereunto the weakenes of his age had long before tied him, neglecting the care of his health and family, in a maner despising his life, which as one engaged for them, he much endangered, riding long and painefull journies for them. Such a one was he: which humor proceeded from the bountie and goodnesse of his nature. Never was minde more charitable or more popular. This course, which I commend in others, I love not to follow: Neither am I without excuse.

He heard, that a man must forget himselfe for his neighbour: that in respect of the generall, the particular was not to be regarded. Most of the worlds-rules and precepts hold this traine, to drive us out of our selves into the wide world, to the use of publike society. They presumed to worke a goodly effect in distracting and withdrawing up from our selves: supposing wee were by a naturall instinct, too-too much tied unto it: and to this end have not spared to say any thing. For to the wise it is no novelty, to preach things as they serve, and not as they are. Truth hath her lets, discommodities and (incompatibilities) with us. Wee (must) often deceive others, lest we beguile ourselves. And seele our eyes, and dull our understanding, thereby to repiare and amend them. *Imperiti enim judicant, et qui frequenter in hoc ipsum fallendi sunt, ne errent.* For unskillfull men judge, who must often even therefore be deceived, lest they err and be deceived. When they prescribe us, to love three, foure yea fifty degrees of things before our selves, they present us with the Arte of shooters, who to come neere the marke take their aime far above the same. To make a crooked sticke straight, we bend it the contrary way. I suppose that in the (Temple) of *Pallas*, as we see in all other religions, they had some apparant mysteries, of which they made shew to all the people, and others more high and secret, to be imparted onely to such as were professed. It is likely, that the true point of friendship, which every man oweth to himselfe, is to be found in these. Not a false amitie, which makes us embrace glory, knowledge, riches, and such like, with a principall and immoderate affection, as members of our being; nor an effeminate and indiscreet friendship; Wherein hapneth as to the Ivie, which corrupts and ruins the wals it claspeth: But a sound and regular amity, equally profitable and pleasant. Who so understandeth all her duties and exerciseth them, hee is rightly endenized in the Muses cabinet: Hee hath attained the type of humane Wisedome and the perfection of our happinesse. This man knowing exactly what hee oweth to himselfe, findeth, that he ought to employ the use of other men and of the world unto himselfe; which to performe, he must contribute the duties and offices that concerne him unto publike societie. He that lives not somewhat to others, liveth little to himselfe. *Qui sibi amicus est, scito hunc amicum omnibus esse* (SEN. *Epist.* vi. f.); He that is friend to himselfe, know, he is friend to all. The principal charge we have, is every man his particular conduct. And for this onely wee live here. As he should forget to live well and religiously, and by instructing and directing others should thinks himselfe acquitted of his duty, would be deemed a foole: Even so, who forsaketh to live healthy and merrily himself, therewith to serve another, in mine opinion taketh a bad and unnaturall course. I will not, that in any charge one shall

take in hand, he refuse or thinke much of his attention, of his labour, of his steps, of his speech, of his sweat, and if need be of his blood.

—*non ipse pro caris amicis,
Aut patria timidus perire.*

HOR. *Car. iv. Od. ix. 51.*

Not fearing life to end
For Country or deare friend.

But it is onely borrowed and accidentally; The minde remaining ever quiet and in health, not without action, but without vexation or passion. Simply to moove or be dooing, costs it so little, that even sleeping it is mooving and dooing. But it must have it's motion with discretion. For the body receiveth the charges imposed him, justly as they are: But the spirit extendeth them, and often to his hinderance makes them heavy; giving them what measure it pleaseth. Like things are effected by divers efforts and different contentions of will. The one may goe without the other. For, how many men doe dayly hazard themselves in warre which they regard not, and presse into the danger of the battels, the losse whereof shall no whit breake their next sleep? Whereas some man in his own house, free from this danger, which he durst not so much as have look't towards it, is for the wars issue more apassionate, and therewith hath his mind more perplexed, than the souldier, that therein employeth both his blood and life. I know how to deale in publike charges, without departing from my selfe (*see Notes*). This sharpnesse and violence of desires hindreth more, then steade the conduct of what we undertake, filling us with impatience to the events, either contrary or slow: and with bitterness and jealousie toward those with whom we negotiate. Wee never governe that thing well, wherewith we are possessed and directed.

—*Male cuncta ministrat
Impetus.*

Fury and haste doe lay all waste,
Misplacing all, disgracing all,

He who therein employeth but his judgment and direction, proceeds more cheerfully; he faines, he yeelds, he deferres at his pleasure according to the occasions of necessity; hee failes of his attempt, without torment or affliction: ready and prepared for a new enterprise. He marcheth alwaies with the reines in his hand. He that is besotted with this violent and tyrannicall intention, doth necessarily declare much indiscretion and injustice. The violence of his desire transports him. They are rash motions, and if fortune helpe not much,

of little fruit. Philosophie wills us to banish choller in the punishment of offences; not to the end revenge should be more moderate, but contrary more weighty and surely set on: whereunto this violence seemeth to bee a let. Choller doth not onely trouble, but wearieth the executioners armes. This passionate heat dulleth and consumes their force. As in too much speede, *festinatio tarda est*, Hastineese is slow. Haste makes waste, and hinders and stayes it selfe: *Ipsa se velocitas implicat*; Swiftnesse entangles it selfe. As for example, according as by ordinary custome I perceive, covetousnesse hath no greater let, then it selfe. The more violent and extended it is, the lesse effectual and fruitfull. Commonly it gathers wealth more speedily being masked with a shew of liberality. A very honest Gentleman and my good friend, was likely to have endangered the health of his body, by an over passionate attention and earnest affection to the affaires of a Prince, who was his Maister. Which Maister hath thus described himselfe unto me: That as another, he discerneth and hath a feeling of the burthen of accidents: but such as have no remedie, he presently resolveth to suffer with patience: For the rest, after he hath appointed necessary provisions, which by the vivacite and nimblenesse of his wit hee speedily effects, hee then attends the event with quietnesse. Verily, I have seene in him at one instant a great carelesnesse and libertie, both in his actions and countenance: Even in important and difficult affaires. I finde him more magnanimous and capable, in bad then in good fortune. His losses are to him more glorious, than his victories; and his mourning than his triumphs. Consider how in meere vaine and frivolous actions, as at chesse, tennis and such like sports, this earnest and violent engaging with an ambitious desire to winne, doth presently cast both minde and limmes into disorder and indiscretion. Wherein a man doth both dazle his sight and distemper his whole body. Hee who demeaneth himselfe with most moderation both in winning and loosing, is ever neerest unto himselfe, and hath his wits best about him. The lesse hee is mooved or passionate in play, the more safely doth he governe the same, and to his greater advantage. We hinder the mindes seazure and holdfast, by giving her so many things to seize upon. Some wee should onely present unto her, others fasten upon her, and others incorporate into her. Shee may see and feele all things, but must onely feede on hir selfe: And bee instructed in that which properly concerneth her, and which meerely belongeth to her essence and substance. The lawes of nature teach us what is just and fit for us. After the wise-men have told us, that according to nature no man is indigent or wanteth, and that each-one is poore but in his owne opinion, they also distinguish subtilly, the desires proceeding from nature, from such as grow from the disorders of our fantasie. Those whose end may be discerned are meerely hirs; and such as flie before us and whose end we cannot

attaine, are properly ours. Want of goods may easily be cured, but the poverty of the minde, is incurable.

*Nam si, quod satis est homini, id satis esse potesset,
Hoc sat erat, nunc, quum hoc non est, qui credimus porro
Diuicias ullas animum mi explere potesse?*

If it might be enough, that is enough for man,
This were enough, since it is not, how thinks we can
Now any riches fill
My minde and greedy will?

Socrates seeing great store of riches, jewells and pretious stuffe carried in pompe through the City: Oh how many things (quoth he) doe not I desire! *Metrodorus* lived daily with the weight of twelve ounces of food: *Epicurus* with lesse: *Metrocles* in winter lay with sheepe, and in summer in the Cloisters of Churches. *Sufficit ad id natura, quod poscit* (*SEN. Epist. xc.*). Nature is sufficient for that which it requires. *Cleanthes* lived by his hands, and boasted, that if *Cleanthes* would, he could nourish another *Cleanthes*. If that which nature doth exactly and originally require at our handes, for the preservation of our being, is over little (as in truth what it is, and how good cheape our life may be maintained, cannot better be known or expressed than by consideratoin. That it is to little, and for the smalnesse thereof, it is out of Fortunes reach, and she can take no hold of it) let us dispense something els unto our selves, and call the custome and condition of every-one of us by the name of Nature. Let us taxe and stint and feede our selves according to that measure; let us extend both our appurtenances and reckonings thereunto. For so farre, mee seemes, we have some excuse: Costomes is a second Nature, and no lesse powerfull. What is wanting to (my) custome, I hold it a defect: And I had well nigh as leefe one should deprive mee of my life, as refraine or much abridge me of my state wherein I have lived so long. I am no more upon termes of any great alteration nor to thruste my selfe into a new and un-usuall course, no not toward augmentation: it is no longer time to become other or be transformed. And as I should complaine if any great adventure should now befall me, and grieve it came not in time that I might have enjoyed the same.

Quo mihi fortuna, si non conceditur uti?

HOR. i. Epist. v. 12.

Whereto should I have much,
If I to use it grutch?

I should likewise bee grieved at any inward purchase: I were better in a manner, never, than so late, to become an honest man: and well

practised to live, when one hath no longer life. I who am ready to depart this World, could easily be induced, to resigne the share of wisdom I have learn't, concerning the Worlds commerce, to any other man new-come into the world. It is even as good as Mustard after dinner. What neede have I of that good, which I cannot enjoy? Whereto serveth knowledge, if one have no head? It is an injury and disgrace of Fortune to offer us those presents, which forsomuch as they faile us when we should most neede them, fill us with a just spite. Guide me no more: I can go no longer. Of so many dismembrings that Sufficently hath, patience sufficeth us. Give the capacity of an excellent treble to a Singer, that hath his lungs rotten; and of eloquence to a hermit confined into the Deserts of *Arabia*. There needs no Arte to further a fall. The end findes it selfe in the finishing of every worke. My world is at an end, my forme is expired. I am wholly of the time past. And am bound to authorize the same, and thereto conforme my issue. I will say this by way of example; that the eclipsing or abridging of tenne dayes, which the Pope hath lately caused, hath taken me so low, that I can hardly recover my selfe. I follow the yeares, wherein we were to compt otherwise. So long and antient a custome doth challenge and recall me to it againe. I am thereby enforced to be somewhat an hereticke: Incapable of innovation, though corrective. My imagination mauler my teeth runnes still tenne dayes before, or tenne behind, and whispers in mine eares: This rule toucheth those, which are to come. If health it selfe so sweetly-pleasing, comes to me but by fittes, it is rather to give me cause of grieve then possession of it selfe. I have no where left mee to retire it. Time forsakes me; without which nothing is enjoyed. How small accompt should I make of these great elective dignities I see in the world, and which are onely given to men, ready to leave the world; wherein they regard not so much how duely they shall discharge them, as how little they shall exercise them: from the beginning they looke to the end. To conclude, I am ready to finish this man, not to make another. By long custome, this forme is changed into substance, and Fortune into Nature. I say therefore, that amongst us feeble creatures, each one is excusable to compt that his owne, which is comprehended under measure. And yet all beyond these limits, is nothing but confusion.

It is the largest extension we can grant our rights. The more we amplifie our neede and possession, the more we engage our selves to the crosses of fortune and adversities. The carriere of our desires must be circumscribed, and tied to strict bounds of nearest and contiguous commodities. Moreover, their course should be managed, not in a straight line, having another end, but round, whose two points hold together, and end in our selves with a short compasse. The actions governed without this reflection, I meane a neere and essentiall re-

flection, as those of the covetous, of the ambitious and so many others, that runne directly point-blanke, the course of which carrieth them away before them, are erroneous and crazed actions. Most of our vacations are like playes. *Mundus universus exercet histrioniam.* All the world doth practise stage-playing. Wee must play our parts duly, but as the part of a borrowed personage. Of a visard and apparance, wee should not make a real essence, nor proper of that which is another. Wee cannot distinguish the skinne from the shirt. It is sufficient to disguise the face, without deforming the breast. I see some transforme and transubstantiate themselves, into as many new formes and strange beings, as they undertake charges: and who emprelate themselves even to the heart and entrailles; and entraine their offices even sitting on their close stoole. I cannot teach them to distinguish the salutations and cappings of such as regard them, from those that respect either their office, their traine or their mule. *Tantum se fortunæ permittunt, etiam ut naturam dediscant.* They give themselves so much over to Fortune, as they forget Nature. They swell in minde and puffe up their naturall discourse, according to the dignity of their office. The Maïor of *Bourdeaux*, and Michael Lord of *Montaigne*, have ever beene two, by an evident separation. To be an advocate or a Treasurer, one should not be ignorant of the craft incident to such callings. An honest man is not comptable for the vice and folly of his trade, and therefore ought not to refuse the exercise of it. It is the custome of his country; and there is profit in it. We must live by the World, and such as we finde it, so make use of it. But the judgement of an Emperour should be above his Empire; and to see and consider the same as a strange accident. He should know how to enjoy himselfe apart; and communicate himselfe as *James* and *Peter*, at least to himselfe. I cannot so absolutely or so deeply engage my selfe. When my wil gives me to any party, it is not with so violent a bond, that my understanding is thereby infected. In the present intestine trouble of our State, my interest hath not made me forget neither the commendable qualities of our adversaries, nor the reproachful of those I have followed. They partially extoll what ever is on their side: I doe not so much as excuse the greater number of my friends actions. A good Oratour loseth not his grace by pleading against me. The intricatenesse of our debate remooved, I have maintained my selfe in equanimity and pure indifferency. *Neque extra necessitates belli, præcipuum odium gero,* Nor beare I capitall hatred, when I am out of the necessitie of warre. Wherein I glory, for that commonly I see men erre in the contrary. Such as extend their choller and hatred, beyond their affaires (as most men doe) shew that it proceedes elsewhence, and from some private cause: Even as one being cured of an ulcer, and his fever remaineth still, declareth it had another more hidden be-

ginning. It is the reason they beare none unto the cause, in generall: and forsomuch as it concerneth the interest of all, and of the state: But they are vexed at it, onely for this; that it toucheth them in private. And therefore are they distempered with a particular passion, both beyond justice and publike reason. *Non tam omnia universi, quam ea, quæ ad quemque pertinent, singuli carpebant.* All did not so much finde fault with all, as every one with those that appertained to every one. I will have the advantage to be for us, which though it be not, I enrage not. I stand firmly to the sounder parts. But I affect not to be noted a private enemy to others, and beyond generall reason. I greatly accuse this vicious forme of obsinate contesting: He is of the League, because he admireth the grace of the Duke of *Guise*: or he is a *Hugonote*, forsomuch as the King of *Navarres* activitie amazeth him: He finds fault in the Kings behaviours, therefore he is sedicious in his heart. I would not give the magistrate my voice, that he had reason to condemne a booke, because an heretick was therein named and extolled to be one of the best Poets of this age. Dare wee not say that a theefe hath a good leg? if he have so indeed? If she be a strumpet, must she needs have a stinking breath? In wiser ages, revoked they the proud title of *Capitolinus*, they had formerly given to *Marcus Manlius*, as the preserver of religion and publike libertie? Suppressed they the memory of his liberalitie, his deeds of armes and military rewards granted to his vertues, because to the prejudice of his countries lawes, he afterward affected a Royalty? If they once conceive a hatred against an Orator or an advocate, the next day he becommeth barbarous and uneloquent. I have elsewhere discoursed of zeale, which hath driven good men into like errours. For my selfe, I can say: that he doth wickedly, and this vertuously. Likewise, prognostickes or sinister events of affaires, they will have every man blinde or dull in his owne cause: and that our perswasion and judgement, serve not the truth but the project of our desires. I should rather erre in the other extremity; So much I feare my desire might corrupt me. Considering, I somewhat tenderly distrust my selfe in things I must desire. I have in my dayes scene wonders, in the indiscreet and prodigious facilitie of people, suffering their hopes and beliefs, to be led and governed, as it hath pleased and best fitted their leaders: above a hundred discontents, one in the necke of another: and beyond their fantasies and dreames. I wonder no more at those, whom the apish toyes of *Apollomius* and *Mahomet* have seduced and blinded: Their sense and understanding is wholly smothered in their passion. Their discretion hath no other choise but what pleaseth them and furthereth their cause. Which I had especially observed in the beginning of our distempered factions and factious troubles. This other which is growne since, by imitation surmounteth the same. Whereby I observe,

that it is an inseparable quality of popular errors. The first being gone, opinions enter shooke one another, following the winde, as waves doe. They are no members of the body, of they may renounce it; of they follow not the common course. But truly they wrong the just parts, when they seeke to helpe them with fraude or deceipts. It have alwaies contracted the same. This meane is but for sicke braines; The healthy have surer and honester wayes to maintaine their resolutions and excuse all contrary accidents. The Heavens never saw so weighty a discord and so harmefull a hatred, as that betweene *Cæsar* and *Pompey*, nor ever shall hereafter: Mee seemeth notwithstanding, I see in those noble and Heroicall mindes, an exemplar and great moderation of the one toward the other. It was a jealousie of honour and emulation of command, which transported them, not to a furious and indiscreete hatred; without malice or detraction. In their sharpest exploits, I discover some reliques of respect and cinders of well-meaning affection. And I imagine, that had it beene possible, either of them desired rather to effect his purpose without overthrowing his competitor, than by working his utter ruine. Note how contrary the proceeding was betweene *Sylla* and *Marius*. We must not runne headlong after our affections and private interests. As in my youth, I ever opposed my selfe to the motions of love, which I felt to usurpe upon me, and laboured to diminish its delights, lest in the end it might vanquish and captivate me to his mercy: So do I now in all other occasions, which my will apprehendeth with an over great appetite. I bend to the contrary of my disposition, as I see the same plunged and drunke with it's owne Wine. I shunne so farre forth to nourish her pleasure, as I may not revoke it without a bloody losse. Those mindes which through stupidity see things but by halves, enjoy this happinesse, that such as be hurtfull, offend them least: It is a spirituall leprosie, that hath some shew of health, and such a health, as Philosophy doth not altogether contemne. But yet it may not lawfully be termed wisdom; as we often doe. And after this manner did in former times some body mocke *Diogenes*, who in the daed of Winter, went all naked, embracing an image of Snow, to try his patience; Who meeting him in this order, said thus unto him; Art thou now very colde? Nothing at all, answered *Diogenes*. What thinkest thou to doe then, that is either hard or exemplar by standing in the colde? replied the other: To measure constancy, we must necessarily know sufferance. But such minds as must behold crosse events, and fortunes injuries in their height and sharpnesse, which must weigh and taste them according to their naturall bitternesse and charge, let them employ their skil and keep themselves from embracing the causes, and divert their approaches. What did King *Cotys*? He payed liberally for that goodly and rich Vessell, which one had presented unto him, but forso-

much as it was exceeding brittle, he presently brake it himselfe, that so betimes he might remoove so easie an occasion of choller against his servants. I have in like sort shunned confusion in my affaires, and sought not to have my goods contiguous to my neighbours, and to such as I am to be linked in strict friendship: Whence commonly ensue causes of alienation and unkindnesse. I have heertofore loved the hazardous play of Cardes and Dice, I have long since left it, onely for this that notwithstanding any faire semblance I made in my losses, I was inwardly disquieted. Let a man of honour, who is to take a lie or endure an outrageous wrong, and cannot admit a bad excuse for paiment or satisfaction, avoid the progresse of contentious altercations. I shunne melancholike complexions and forward men, as infected. And in matters, I cannot talke-of without interest and emotion, I meddle not with them, except duty constraine mee thereunto. *Melius non incipient quam desinent.* They shall beter not beginne, than leave off. The surest way, is then to prepare our selves before occasion. I know that some wisemen have taken another course, and have not feared to engage and vehemently to insinuate themselves into diverse objects. Those assure themselves of their own strength, under which they shrowd themselves against all manner of contrary events, making mischiefs to wrestle one against another, by vigor and vertue of patience:

*Velut rupes vastum quæ prodit in æquor,
Obvia ventorum furiis expostaque ponto.
Vim cunctam atque minas perfert calique marisque,
—ipsa immota manens.—*VIRG. *Æn.* x. 693.

Much like a rocke, which butts into the Mainie,
Meeting with windes-rage, to the Sea laid plaine,
It doth the force of skies and Seas sustaine,
Endure their threats, yet doth unmoov'd remaine.

Let us not imitate these examples, we shall not attaine them. They opinionate themselves resolutely to behold, and without perturbation to be spectatours of their Countries ruine, which wilome possessed and commaunded their full will. As for our vulgar mindes, therein is too much effort and roughnesse. *Cato* quit thereby the noblest life that ever was. Wee seely-ones must seeke to escape the storme further off: We ought to provide for apprehension and not for patience, and avoid the blowes wee cannot withstand. *Zeno* seeing *Chremonides* a young man whom he loved, approach to sit neere him, rose up sodainly, *Cleanthes* asking him the reason: I understand (saith hee) that Physitions above all things prescribe rest, and forbid emotion in all tumors. *Socrates* saith not; yeeld not to the allurements of beauty; maintaine it, enforce our selves to the contrary;

Shunne her (saith hee) runne out of her sight and company; as from a violent prison, that infecteth and stingeth farre off. And his good Disciple, faining or reciting, but in mine opinion, rather reciting then faining, the matchles perfections of that great *Cyrus*, describeth him distrusting his forces to withstand the blandishments or allurings of the divine beautie of that famous *Panthea* his Captive, committing the visitation and garde of her to an other, that had lesse libertie then himselfe. And likewise the Holy-Ghost saith, *ne nos inducas in tentationem* (*Matth.* vi. 13), and lead us not into temptation. We pray not that our reason be not encountred and vanquished by concupiscence: but that it be not so much as assayed therewith: That we bee not reduced to an estate, where we should but suffer the approaches, sollicitations and temptations of sinne: and we entreat our Lord, to keepe our conscience quiet, fully perfectly free from all commerce of evill. Such as say they have reason for their revenging passion, or any other middle-troubling perturbation; say often truth, as things are, but not as they were. They speake to us, when the causes of their error are by themselves fostred and advanced. But retire further bakeward, recall their causes to either beginning: there you surprise and put them to a *non-plus*. Would they have their fault be lesse, because it is more ancient; and that of an unjust beginning, the progresse be just? He that (as I doe) shall wish his countries well-fare, without fretting or pining himselfe, shall be grieved, but not swoone, to see it threatening, either his owne downfall, or a continuance no lesse ruinous. Oh seeley-weake parke, whom both waves, windes and Pilot, hull and tosse to so contrary desseignes:

—*in tam diversa, magister,
Ventus et unda trahunt.*

Maister the wave and winde
So divers wayes doe binde.

Who gapes not after the favour of Princes, as after a thing without which hee cannot live; nor is much disquited at the coldness of their entertainment or frowning countenance, nor regardeth the inconstancy of their will. Who hatcheth not his children or huggeth not honours, with a slavish propension, nor leaves to live commodiously having once lost them. Who doth good, namely for his owne satisfaction, nor is much vexed to see men censure of his actions against his merit. A quarter of an ownc of patience provideth for such inconveniencies. I finde ease in this receipt: redeeming my selfe in the beginning, as good cheape as I can: By which meanes I perceive my selfe to have escaped much trouble and manifold difficulties. With very little force, I stay these first motions of my perturbations: And I abandon the subject which beginnes to molest me, and before it

transport mee. Hee that stops not the loose, shall hardly stay the course. He that cannot shut the door against them, shall never expell them being entered. He that cannot attaine an end in the beginning, shall not come to an end of the conclusion. Nor shall he endure the fall that could not endure the starts of it. *Etenim ipsæ se impellunt, ubi semel à ratione discessum est, ipsaque sibi imbecillitas indulget, in altumque provehitur imprudens: nec reperit locum consistendi* (Cic. Tusc. Qu. iv.). For they drive themselves headlong when once they are parted and past reason, and weakness soothes it selfe, and unawares is carried into the deepe, nor can it finde a place to tarry in. I feele betimes, the low windes, which are forerunners of the storme, buzze in mine eares and sound and trie me within:

—*cœu flamina prima*

*Cum deprensa fremunt sylvis, et cæca volutant
Murmura, venturos nautis prodentia ventos.*

VIRG. *Æn.* x. 97.

As first blasts in the woods perceiv'd to goe,
Whistle, and darkely speake in murmurs low,
Foretelling Marriners what windes will grow.

How often have I done my selfe an apparant injustice, to provide the danger I should fall into, by receiving the same, happily worse, from the judges, after a world of troubles, and of foule, and vile practices, more enemies to my naturall disposition, then fire or torment? *Conventi à litibus quantum licet, et nescio an paulo plus etiam quam licet, abhorrentem esse; Est enim non modo liberale, paululum nonnunquam de suo jure decedere, sed interdum etiam fructuosum* (Cic. Off. i.). As much as wee may, and it may be more than we may, we should abhorre brabling and lawing; for it is not onely ingenious part, but sometimes profitable also at sometimes to yeeld a little of our right. If we were wise indeede, we should rejoyce and glory, as I heard once a yong-gentleman, borne of a very great house, very wittily and unfainedly, rejoyce with all men that his mother had lost her sute; as if it had been a cough, an ague, or any other yrksome burthen. The favours, which fortune might have given mee, as aliances and acquaintances with such as have Sovereigne authority in those things; I have, in my conscience done much instantly to evoide imploying them to others prejudice, and not over value my rights above their worth. To conclude, I have so much prevailed by my endeavours (in a good houre I may speake it) that I am yet a virgin for any sutes in law, which have notwithstanding not omitted gently to offer me their service, and under pretence of lawfull titles insinuate themselves into my allowance, would I but have given eare unto them. And as a pure maiden from

quarrels; I have without important offence, either passive or active, lingred out a long life, and never heard worse than mine owne name. A rare grace of heaven. Our greatest agitations, have strange springs and ridiculous causes. What ruine did our last Duke of *Burgundy* runne into, for the quarrell of a cart-load of sheepes-skinnes? And was not the graving of a seale, the chiefe cause of the most horrible breach and topsie-turvy, that ever this worlds-frame endured? For *Pompey* and *Cesar* are but the new buddings and continuation of two others. And I have seene in my time, the wisest heads of this realme assembled with great ceremony and publike charge, about treaties and agreements, the true deciding whereof depended in the meane while absolutely and soveraignely of the will and consultations held in some Ladies pate or cabinet; and of the inclination of some silly woman. Poets have most judiciously look't into this, who but for an apple have set all *Greece* and *Asia* on fire and sword. See why that man doth hazzard both his honour and life on the fortune of his rapier and dagger; let him tell you whence the cause of the contention ariseth; he can not without blushing: so vaine and so frivolous is the occasion. To embarke him, there needes but little advisement, but being once-in, all parts doe worke; Then are greater provisions required, more difficult and important. How farre more easie is it not to enter, than to get forth? We must proceed contrary to the brier, which produceth a long and straight stalke at the first springing; but after, as tired and out of breath, it makes many and thicke knots, as if they were pawses, shewing to have no more that vigor and constancy. Wee should rather begin gently and leasurely; and keepe our strength and breath for the perfection of the worke. We direct affaires in the beginning, and hold them at our mercy, but being once undertaken, they guide and transport us, and we must follow them. Yet may it not be said, that this counsell hath freed me from all difficulties, and that I have not beene often troubled to controle and bridle my passions: which are not alwayes governed according to the measure of occasions: whose entrances are often sharpe and violent. So is it, that thence may be reaped good fruit and profit. Except for those, who in well doing are not satisfied with any benefit, if their reputation be in question. For in truth, such an effect is not compted of but by every one to himselfe. You are thereby better satisfied, but not more esteemed, having reformed your selfe, before you come into action or the matter was in sight: yet not in this onely, but in all other duties of life, their course which aime at honour, is diverse from that, which they propound unto themselves, that follow order and reason. I finde some, that inconsiderately and furiously thrust themselves into the lists, and grow slacke in the course. As *Plutarke* saith, that Such as by the vice of bashfulness are soft and tractable to graunt

whatsoever is demanded, are afterwards as prone and facile to recant and breake their word: In like manner, he that enters lightly into a quarrel, is subject to leave it as lightly. The same difficulty which keepes me from embracing the same, should encite me, being once mooved and therein engaged, to continue resolute. It is an ill custome. Being once embarked, one must either goe on or sinke.... Attempt coldly (sayed *Byas*) but pursue hotly. For want of judgement, our hearts faile us; Which is also less tolerable. Most agreements of our moderne quarrels, are shameful and false: We onely seeke to save apparances, and therewithst betray and disavow our true intentions. We salve the deede: We know how wee spake it, and in what sence the by-standers know it: yea and our friends to whom have our advantages knowne. It is to the prejudice of our liberty and interest of our resolutions honour, that we dis-avow our thoughts and seeke for starting holes in falsehood, to make our agreements. We bely our selves, to salve a lye we have given to another. We must not looke whether your action or word may admit another interpretation, but it is your owne true and sincere construction, that you must now maintaine, whatsoever it cost you. It is to your vertue and to your conscience that men speake; parts that ought not to bee disguised. Leave we these base courses, wrangling shifts and verball meanes, to petty-fogging Lawyers. The excuses and reparations, or satisfactions, which dayly I see made, promised and given to purge indiscretion, seeme to me more foule than indiscretion it selfe. Better were it for one to offend his adversary againe, than in giving him such satisfaction, to wrong himselfe so much. You have braved him mooved by choller, and now you seeke to pacifie and flatter him in your cold and better sense: Thus you abase your selfe, more than you were before exalted. I find no speech so vicious in a Gentlemen, as I deeme any recantation hee shall make, dishonorable; especially if it be wrested from him by authority: Forsomuch as obstinacy is in him more excusable, than cowardize. Passions are to me as easie to be avoyded, as they are difficult to be moderated. *Excinduntur facilius animo, quàm temperantur.* They are more easily rooted out of the minde, than brought to good temper. He that cannot attaine to this noble Stocall impassibility, let him shrowd himselfe in the bosome of this my popular stupidity. What they did by vertue, I inure my selfe to doe by Nature. The middle region harbourth stormes; the two extremes containe Philosophers and rurall men, they concurre in tranquility and good hap.

*Felix qui potuit rerum cognoscere causas,
Atque metus omnes et inexorabile fatum
Subjecit pedibus, strepitumque Achærontis avari.*

*Fortunatus et ille, Deos qui novit rarestes,
Panáque, Sylvanúmque senem, Nymphasque sorores.*

VIRG. *Georg. ii.* 490.

Happy is he that could of things the causes finde,
And subject to his feete all fearefulnessse of minde,
Inexorable fate, and noyse of greedy Hell.
And happy he, with Country Gods acquainted well,
Pan and old *Sylvan* knowes,
And all the sister shrowes.

The beginnings of all things are weake and tender. We must therefore be clear-sighted in beginnings: For, as in their budding we discern not the danger, so in their full growth we perceive not the remedy. I should have encountred a thousand crosses, daily more hard to be digested in the course of ambition, than it hath bin uneasie for me to stay the naturall inclination, that led me unto them.

—*jure perhorruí,*
Latè conspicuum tollere verticem.

HOR. *Car. iii.* 16, 18.

I have beene much afraid for causes right,
To raise my foretop far abroad to sight.

All publike actions are subject to uncertaine and divers interpretations: For, too many heads judge of them. Some say of this my City-employment (whereof I am content to speake a word; not that it deserves it, but to make a shew of my manners in such things) I have demeaned my selfe like one that is too slowly mooved and with a languishing affection: And they are not altogether void of reason. I strive to keepe me minde and thoughts quiet. *Cum semper Natura, tum etiam ætate jam quictus.* Both ever quiet by Nature, and now because of yeeres. And if at any time they are debauched to some rude and piercing impression, it is in truth without my consent. From which naturall slacknesse, one must not therefore inferre any prooffe of disability: For, Want of care and lacke of judgment are two things: And less unkindness and ingratitude towards those Citizens, who to gratifie me, employed the utmost of all the meanes they could possibly; both before they knew me and since. And who did much more for me, in appointing me my charge the second time, then in choosing me the first. I love them with all my heart, and wish them all the good that may be. And truly if occasion had beene offered, I would have spared nothing to have done them service. I have stirred and laboured for them, as I doe for my selfe. They are good people, warlike and generous; yet capable of obedience and discipline, and fit for good employment, if they be well guided. They

say likewise, that I passed over this charge of mine without any deede of note or great shew. It is true. Moreover, they accuse my cessation, when as all the world was convicted of too much doing: I have a most nimble motion, where my will doth carry me. But this point is an enemy unto perseverance. Whosoever will make use of me, according to my selfe, let him employ me in affaires, that require vigor and liberty: that have a short, a straight, and there withall a hazardous course: I may peradventure somewhat prevaile therein. Whereas if it be tedious, crafty, laborious, artificiall and intricate, they shall doe better to addresse themselves to some other man. All charges of importance are not difficult. I was prepared to labour somewhat more earnestly, if there had been great neede. For it lyes in my power, to doe something more than I make shew-of, and than I love to doe. To my knowledge, I have not omitted any motion that duty required earnestly at my hands. I have easily forgotten those, which ambition blendeth with duty and cloketh with her title. It is they, which most commonly fill the eyes and eares, and satisfie men. Not the thing it selfe, but the apparance payeth them. If they heare no noise, they imagine we sleepe. My humours are contrary to turbulent humors. I could pacifie an inconvenience or trouble without troubling my selfe, and chastise a disorder without alteration.

Have I neede of choller and inflammation; I borrow it, and therewith maske my selfe: My maners are musty, rather wallowish then sharpe. I accuse not a Magistrate that sleepeth, so they that are under it sleepe also. So sleepe the lawes. For my part, I commend a gliding, an obscure and reposed life: *Neque submissam et abjectam, neque se efferentem* (CIC. Off. i.). Neyther too abject and submisse, nor vaunting it selfe too much. But my fortune will have it so; I am descended of a family that hath lived without noise and tumult: and of long continuance particularly ambitious of integrity. Our men are so framed to agitation and ostentations that goodnesse, moderation, equity, constancy, and such quiet and meane qualities, are no more heard of. Rough bodies are felt, smooth ones are handled imperceptibly. Sickenesse is felt, health little or not at all: nor things that annoint us, in regard of such as sting us. It is an action for ones reputation and private commodity, and not for the common good, to refer that to be done in the market place, which a man may do in the counsel-chamber: and at noone day, what might have been effected the night before: and to be jealous to doe that himselfe, which his fellow can performe as well. So did some Surgeons of Greece shew the operations of their skill, upon scaffolds, in view of all passengers, thereby to get more practise and custome. They suppose, that good orders cannot be understood, but by the sound of a trumpet. Ambition is no vice for petty companions, and for such endeavours as ours. One said to Alexander: your father will

leave you a great commaund, easie and peacefull: the boy was envious of his fathers victories, and of the justice of his government. He would not have enjoyed the worlds Empire securely and quietly. Alcibiades in Plato, loveth rather to die yong, faire, rich, noble learned, and all that in excellence, then to stay in the state of such a condition. This infirmity is happily excusable, in so strong and full a minde. When these petty wretched soules, are therewith enveagled; and thinke to publish their fame, because they have judged a cause rightly, or continued the order in guarding of a Cities gates; by how much more they hoped to raise their head, so much more doe they shew their simplicity. This petty well-doing, hath neither body nor life. It vanisheth in the first moneth; and walkes but from one corner of a street to another. Entertaine therewith your sonne and your servant, and spare not. As that ancient fellow, who having no other auditor of his praises and applauding of his sufficiency, boasted with his chamber-maide, exclaiming: Oh Perette, what a gallant and sufficient man thou hast to thy maister! If the worst happen, entertaine your selves in your selves: As a Councillour of my acquaintance, having degorged a rable of paragraphes, with an extreame contention and like foolishnesse; going out of the counsell chamber, to a pissing place neere unto it; was heard very conscienciously to utter these words to himselfe: *Non nobis, Domine, non nobis, sed nomini tuo da gloriam* (*Psal. cxv. 1.*) Not unto us, O Lord, not unto us, but unto thy name give the glory. He that cannot otherwise, let him pay himselfe out of his owne purse. Fame doth not so basely prostitute it selfe, nor so cheape. Rare and exemplar actions, to which it duly belongeth, could not brooke the company of this innumerable multitude of vulgar petty actions. Well may a piece of marble raise your titles as high as you list, because you have repaired a piece of an olde Wall, or cleansed a common ditch, but men of judgment will never doe it. Report followeth not all goodnesse, except difficulty and rarietie be joyned thereunto. Yea simple estimation, according to the Stoikes, is not due to every action proceeding from vertue. Neither would they have him commended, who through temperance abstaineth from an old blear-ey'd woman. Such as have knowen the admirable qualities of Scipio the Affrican, renounce the glory which Panætius ascribeth unto him, to have abstained from gifts, as a glory, not his, alone, but peculiar to that age. We have pleasures sortable to our fortune; let us not usurpe those of greatnesse. Our owne are more naturall. They are the more solide and firme, by how much the meaner. Since it is not for conscience, at least for ambition let us refuse ambition. Let us disdaine this insatiate thirst of honour and renowne, base and beggerly, which makes us so suppliantly to crave it of all sorts of people: *Quæ est ista laus quæ possit è macello peti?* (*Cic. De Fin. ii.*). What praise is this,

which may bee fetcht out of the Shambles? By abject meanes, and at what vile rate soever. To be thus honoured, is meerely a dishonour. Learne we to bee no more greedy of glory, then we are capable of it. To be proud of every profitable and innocent action, (is) fit for men to whom it is extraordinary and rare. They will value it for the price it cost them. According as a good effect is more resounding; I abate of it's goodnesse: the jealousie I conceive, it is produced more because it is so resounding, than because it is good. What is set out to shew, is halfe solde. Those actions have more grace, which carelessly and under silence, passe from the hands of a Workeman, and which some honest man afterward chuseth and redeemeth from darknesse, to thrust them into the worlds light; Onely for their worth. *Mihi quidem laudabiliora videntur omnia, quæ sine venditione, et sine populo teste fiunt* (Cic. *Tusc. Qu. ii.*): All things in sooth seeme to me more commendable that are performed with no ostentation; and without the people to witnesse, said the most glorious man of the world. I had no care but to preserve and continue, which are deafe and insensible effects. Innovation is of great lustre: But interdicted in times, when we are most urged, and have to defend our selves but from novelties; Abstinence from doing, is often as generous, as doing: but it is not so apparant. My small worth is in a manner all of this kinde. To be short, the occasions in this my charge have seconded my complexion; for which I conne them hartly thanks. Is there any man that desireth to be sicke, to see his Physitian set a worke? And Should not that Physition be well whipped, who to put his arte in practize, would wish the plague to infect us? I was never possessed with this impious and vulgar passion, to wish that the troubled and distempered state of this City, might raise and honour my government. I have most willingly lent them my hand to further, and shoulders to aid their ease and tranquility. He that will not thanke me for the good order and for the sweet and undisturbed rest, which hath accompanied my charge; cannot at least deprive me of that part, which by the title of my good fortune belongeth unto me. This is my humour, that I love as much to be happy as wise: And attribute my successes as much to the meere grace of God, as to the meane (or) furtherance of my operation. I had sufficiently published to the World my (insufficiency) in managing of such publike affaires: Nay, there is something in me, worse than insufficiency: Which is, that I am not much displeased therewith: and that I endeavour not greatly to cure it, considering the course of life I have determind to my selfe. Nor have I satisfied my selfe in this employment. But have almost attained what I had promised unto my selfe: Yet have I much exceeded, what I had promised those, with whom I was to negotiate: For I willingly promise somewhat lesse, then I can performe, or hope to accomplish.

Of this I am assured, I have never left offence or hatred among them:
To have left either regret or desire of me. This now I certainly,
I have not much affected it.

—*Méne huic confidere monstro,*
Méne salis placidi vultum, fluctusque quietos
Ignorare?—VIRG. *Æn.* v. 849.

Should I this monster trust? Should I not know
The calme Seas counterfait dissembling show,
How quietly sometimes the flouds will go?

EDMUND BURKE

(Edmund Burke, British statesman, writer and orator, was born in Dublin in January 1729. From a school at Ballitore, Kildare, Burke went to Trinity College in Dublin where he devoted himself to extensive reading. Entering Middle Temple in London, 1750, for the study of law, he soon abandoned it for literary work. Upon entering Parliament for Wendover, he soon became prominent as a great Whig defender. When he lost his seat after the failure of the Rockingham administration, he still continued to draw public attention. He attacked the system of double government and defended party government against both George and Chatham. His "Speech on Conciliation", with which we Americans are familiar, appeared in 1775. He was a firm backer of the American Colonies and took their part against King George III and Lord North. He died at Beaconsfield in July 1797.)

AN ADDRESS TO THE KING

WE, your Majesty's most dutiful and loyal subjects, several of the peers of the realm, and several members of the House of Commons chosen by the people to represent them in parliament, do in our individual capacity, but with hearts filled with a warm affection to your Majesty, with a strong attachment to your royal house, and with the most unfeigned devotion to your true interest, beg leave, at this crisis of your affairs, in all humility to approach your royal presence.

Whilst we lament the measures adopted by the public councils of the kingdom, we do not mean to question the legal validity of their proceedings. We do not desire to appeal from them to any person whatsoever. We do not dispute the conclusive authority of the bodies in which we have a place over all their members. We know that it is our ordinary duty to submit ourselves to the determinations of the majority in everything except what regards the just defence of our honour and reputation. But the situation into which the British empire has been brought, and the conduct to which we are reluctantly driven in that situation, we hold ourselves bound by the relation in which we stand both to the Crown and the people clearly to explain to your Majesty and our country.

We have been called upon in the speech from the throne at the opening of this session of parliament, in a manner peculiarly marked, singularly emphatical, and from a place from whence anything imply-

ing censure falls with no common weight, to concur in unanimous approbation of those measures which have produced our present distresses, and threaten us in future with others far more grievous. We trust, therefore, that we shall stand justified in offering to our sovereign and the public our reasons for persevering inflexibly in our uniform dissent from every part of those measures. We lament them from an experience of their mischief, as we originally opposed them from a sure foresight of their unhappy and inevitable tendency.

We see nothing in the present events in the least degree sufficient to warrant an alteration in our opinion. We were always steadily averse to this civil war—not because we thought it impossible that it should be attended with victory; but because we were fully persuaded that in such a contest victory would only vary the mode of our ruin; and, by making it less immediately sensible, would render it the more lasting and the more irretrievable. Experience had but too fully instructed us in the possibility of the reduction of a free people to slavery by foreign mercenary armies. But we had an horror of becoming the instruments in a design of which, in our turn, we might become the victims. Knowing the inestimable value of peace, and the contemptible value of what was sought by war, we wished to compose the distractions of our country, not by the use of foreign arms, but by prudent regulations in our own domestic policy. We deplored, as your Majesty has done in your speech from the throne, the disorders which prevail in your empire: but we are convinced that the disorders of the people, in the present time and in the present place, are owing to the usual and natural cause of such disorders at all times, and in all places, where such have prevailed,—the misconduct of government;—that they are owing to plans laid in error, pursued with obstinacy, and conducted without wisdom.

We cannot attribute so much to the power of faction, at the expense of human nature, as to suppose, that in any part of the world a combination of men, few in number, not considerable in rank, of no natural hereditary dependencies, should be able, by the efforts of their policy alone, or the mere exertion of any talents, to bring the people of your American dominions into the disposition which has produced the present troubles. We cannot conceive that, without some powerful concurring cause, any management should prevail on some millions of people, dispersed over an whole continent, in thirteen provinces, not only unconnected, but in many particulars of religion, manners, government, and local interest totally different and adverse, voluntarily to submit themselves to a suspension of all the profits of industry and all the comforts of civil life, added to all the evils of an unequal war carried on with circumstances of the greatest asperity and rigour. This, Sir, we conceive, could never

have happened but from a general sense of some grievance, so radical in its nature, and so spreading in its effects, as to poison all the ordinary satisfactions of life, to discompose the frame of society, and to convert into fear and hatred that habitual reverence ever paid by mankind to an ancient and venerable government.

That grievance is as simple in its nature, and as level to the most ordinary understanding, as it is powerful in affecting the most languid passions;—it is

“An attempt made to dispose of the property of a whole people without their consent.”

Your Majesty's English subjects in the colonies, possessing the ordinary faculties of mankind, know, that to live under such a plan of government is not to live in a state of freedom. Your English subjects in the colonies, still impressed with the ancient feelings of the people from whom they are derived, cannot live under a government which does not establish freedom as its basis.

This scheme, being therefore set up in direct opposition to the rooted and confirmed sentiments and habits of thinking of an whole people, has produced the effects which ever must result from such a collision of power and opinion. For we beg leave, with all duty and humility, to represent to your Majesty (what we fear has been industriously concealed from you), that it is not merely the opinion of a very great number, or even of the majority, but the universal sense of the whole body of the people in those provinces, that the practice of taxing in the mode, and on the principles, which have been lately contended for and enforced, is subversive of all their rights.

This sense has been declared, as we understand on good information, by the unanimous voice of all their assemblies; each assembly also, on this point, is perfectly unanimous within itself. It has been declared as fully by the actual voice of the people without these assemblies as by the constructive voice within them; as well by those in that country who addressed as by those who remonstrated; and it is as much the avowed opinion of those who have hazarded their all rather than take up arms against your Majesty's forces, as of those who have run the same risk to oppose them. The difference among them is, not on the grievance, but on the mode of redress; and we are sorry to say, that they who have conceived hopes from the placability of the ministers, who influence the public councils of this kingdom, disappear in the multitude of those who conceive that passive compliance only confirms and emboldens oppression.

The sense of a whole people, most gracious sovereign, never ought to be contemned by wise and beneficent rulers; whatever may be the abstract claims, or even rights, of the supreme power. We have

been too early instructed, and too long habituated to believe, that the only firm seat of all authority is in the minds, affections, and interests of the people, to change our opinions on the theoretic reasonings of speculative men, or for the convenience of a mere temporary arrangement of state. It is not consistent with equity or wisdom to set at defiance the general feelings of great communities, and of all the orders which compose them. Much power is tolerated, and passes unquestioned, where much is yielded to opinion. All is disputed where everything is enforced.

Such are our sentiments on the duty and policy of conforming to the prejudices of a whole people, even where the foundation of such prejudices may be false or disputable. But permit us to lay at your Majesty's feet our deliberate judgment on the real merits of that principle, the violation of which is the known ground and origin of these troubles. We assure your Majesty, that, on our parts, we should think ourselves unjustifiable as good citizens, and not influenced by the true spirit of Englishmen, if, with any effectual means of prevention in our hands, we were to submit to taxes to which we did not consent, either directly, or by a representation of the people, securing to us the substantial benefit of an absolutely free disposition of our own property in that important case. And we add, Sir, if fortune, instead of blessing us with a situation where we may have daily access to the propitious presence of a gracious prince, had fixed us in settlements on the remotest part of the globe, we must carry these sentiments with us, as part of our being; persuaded, that the distance of situation would render this privilege in the disposal of property but the more necessary. If no provision had been made for it, such provision ought to be made or permitted. Abuses of subordinate authority increase, and all means of redress lessen, as the distance of the subject removes him from the seat of the supreme power. What, in those circumstances, can save him from the last extremes of indignity and oppression but something left in his own hands, which may enable him to conciliate the favour and control the excesses of government? When no means of power to awe or to oblige are possessed, the strongest ties which connect mankind in every relation, social and civil, and which teach them mutually to respect each other, are broken. Independency, from that moment, virtually exists. Its formal declaration will quickly follow. Such must be our feelings for ourselves; we are not in possession of another rule for our brethren.

When the late attempt practically to annihilate that inestimable privilege was made, great disorders and tumults very unhappily and very naturally arose from it. In this state of things we were of opinion that satisfaction ought instantly to be given; or that, at least, the punishment of the disorder ought to be attended with the redress

of the grievance. We were of opinion, that if our dependencies had so outgrown the positive institutions made for the preservation of liberty in this kingdom that the operation of their powers was become rather a pressure than a relief to the subjects in the colonies, wisdom dictated that the spirit of the constitution should rather be applied to their circumstances, than its authority enforced with violence in those very parts where its reason became wholly inapplicable.

Other methods were then recommended, and followed, as infallible means of restoring peace and order. We looked upon them to be, what they have since proved to be, the cause of inflaming discontent into disobedience, and resistance into revolt. The subversion of solemn fundamental charters, on a suggestion of abuse, without citation, evidence, or hearing: the total suspension of the commerce of a great maritime city, the capital of a great maritime province, during the pleasure of the Crown: the establishment of a military force, not accountable to the ordinary tribunals of the country in which it was kept up:—these and other proceedings at that time, if no previous cause of dissension had subsisted, were sufficient to produce great troubles: unjust at all times, they were then irrational.

We could not conceive, when disorders had arisen from the complaint of one violated right, that to violate every other was the proper means of quieting an exasperated people. It seemed to us absurd and preposterous to hold out, as the means of calming a people in a state of extreme inflammation, and ready to take up arms, the austere law which a rigid conqueror would impose, as the sequel of the most decisive victories.

Recourse, indeed, was at the same time had to force; and we saw a force sent out, enough to menace liberty, but not to awe opposition; tending to bring odium on the civil power, and contempt on the military; at once to provoke and encourage resistance. Force was sent out not sufficient to hold one town; laws were passed to inflame thirteen provinces.

This mode of proceeding by harsh laws and feeble armies could not be defended on the principle of mercy and forbearance. For mercy, as we conceive, consists, not in the weakness of the means, but in the benignity of the ends. We apprehend that mild measures may be powerfully enforced; and that acts of extreme rigour and injustice may be attended with as much feebleness in the execution as severity in the formation.

In consequence of these terrors, which, falling upon some, threatened all, the colonies made a common cause with the sufferers; and proceeded, on their part, to acts of resistance. In that alarming situation, we besought your Majesty's ministers to entertain some distrust of the operation of coercive measures, and to profit of their

experience. Experience had no effect. The modes of legislative rigour were construed, not to have been erroneous in their policy, but too limited in their extent. New severities were adopted. The fisheries of your people in America followed their charters; and their mutual combination to defend what they thought their common rights, brought on a total prohibition of their mutual commercial intercourse. No distinction of persons or merits was observed—the peaceable and the mutinous, friends and foes, were alike involved, as if the rigour of the laws had a certain tendency to recommend the authority of the legislator.

Whilst the penal laws increased in rigour, and extended in application over all the colonies, the direct force was applied but to one part. Had the great fleet and foreign army since employed been at that time called for, the greatness of the preparation would have declared the magnitude of the danger. The nation would have been alarmed, and taught the necessity of some means of reconciliation with our countrymen in America, who, whenever they are provoked to resistance, demand a force to reduce them to obedience full as destructive to us as to them. But parliament and the people, by a premeditated concealment of their real situation, were drawn into perplexities which furnished excuses for further armaments; and whilst they were taught to believe themselves called to suppress a riot, they found themselves involved in a mighty war.

At length British blood was spilled by British hands—a fatal era, which we must ever deplore, because your empire will for ever feel it. Your Majesty was touched with a sense of so great a disaster, Your paternal breast was affected with the sufferings of your English subjects in America. In your speech from the throne, in the beginning of the session of 1775, you were graciously pleased to declare yourself inclined to relieve their distresses, and to pardon their errors. You felt their sufferings under the late penal acts of parliament. But your ministry felt differently. Not discouraged by the pernicious effects of all they had hitherto advised, and notwithstanding the gracious declaration of your Majesty, they obtained another act of parliament, in which the rigours of all the former were consolidated, and embittered by circumstances of additional severity and outrage. The whole trading property of America (even unoffending shipping in port) was indiscriminately and irrecoverably given, as the plunder of foreign enemies, to the sailors of your navy. This property was put out of the reach of your mercy. Your people were despoiled; and your navy, by a new, dangerous, and prolific example, corrupted with the plunder of their countrymen. Your people in that part of your dominions were put, in their general and political as well as their personal capacity, wholly out of the protection of your government.

Though unwilling to dwell on all the improper modes of carrying on this unnatural and ruinous war, and which have led directly to the present unhappy separation of Great Britain and its colonies, we must beg leave to represent two particulars, which we are sure must have been entirely contrary to your Majesty's order or approbation. Every course of action in hostility, however that hostility may be just or merited, is not justifiable or excusable. It is the duty of those who claim to rule over others not to provoke them beyond the necessity of the case; nor to leave stings in their minds which must long rankle, even when the appearance of tranquillity is restored.—We therefore assure your Majesty, that it is with shame and sorrow we have seen several acts of hostility, which could have no other tendency than incurably to alienate the minds of your American subjects. To excite, by a proclamation issued by your Majesty's governor, a universal insurrection of negro slaves in any of the colonies, is a measure full of complicated horrors; absolutely illegal; suitable neither to the practice of war nor to the laws of peace. Of the same quality we look upon all attempts to bring down on your subjects an irruption of those fierce and cruel tribes of savages and cannibals, in which the vestiges of human nature are nearly effaced by ignorance and barbarity. They are not fit allies for your Majesty in a war with your people. They are not fit instruments of an English government. These, and many other acts, we disclaim as having advised or approved when done; and we clear ourselves to your Majesty, and to all civilized nations, from any participation whatever, before or after the fact, in such unjustifiable and horrid proceedings.

But there is one weighty circumstance which we lament equally with the causes of war, and with the modes of carrying it on—that no disposition whatsoever towards peace or reconciliation has ever been shown by those who have directed the public councils of this kingdom, either before the breaking out of these hostilities, or during the unhappy continuance of them. Every proposition made in your parliament to remove the original cause of these troubles, by taking off taxes, obnoxious for their principle or their design, has been overruled: every bill, brought in for quiet, rejected even on the first proposition. The petitions of the colonies have not been admitted even to a hearing. The very possibility of public agency, by which such petitions could authentically arrive at parliament, has been evaded and chicaned away. All the public declarations which indicate anything resembling a disposition to reconciliation, seem to us loose, general, equivocal, capable of various meanings, or of none; and they are accordingly construed differently, at different times, by those on whose recommendation they have been made; being wholly unlike the precision and stability of public faith; and bearing

no mark of that ingenuous simplicity, and native candour and integrity, which formerly characterised the English nation.

Instead of any relaxation of the claim of taxing at the discretion of parliament, your ministers have devised a new mode of enforcing that claim, much more effectual for the oppression of the colonies, though not for your Majesty's service, both as to the quantity and application, than any of the former methods; and their mode has been expressly held out by ministers, as a plan not to be departed from by the House of Commons, and as the very condition on which the legislature is to accept the dependence of the colonies.

At length, when, after repeated refusals to hear or to conciliate, an act, dissolving your government by putting your people in America out of your protection, was passed, your ministers suffered several months to elapse without affording to them, or to any community, or any individual amongst them, the means of entering into that protection even on unconditional submission, contrary to your Majesty's gracious declaration from the throne, and in direct violation of the public faith.

We cannot, therefore, agree to unite in new severities against the brethren of our blood for their asserting an independency, to which, we know in our conscience, they have been necessitated by the conduct of those very persons who now make use of that argument to provoke us to a continuance and repetition of the acts, which in a regular series have led to this great misfortune.

The reasons, dread Sir, which have been used to justify this perseverance in a refusal to hear or conciliate, have been reduced into a sort of parliamentary maxims which we do not approve. The first of these maxims is, "that the two Houses ought not to receive (as they have hitherto refused to receive) petitions containing matter derogatory to any part of the authority they claim." We conceive this maxim, and the consequent practice, to be unjustifiable by reason or the practice of other sovereign powers, and that it must be productive, if adhered to, of a total separation between this kingdom and its dependencies. The supreme power, being in ordinary cases the ultimate judge, can, as we conceive, suffer nothing in having any part of his rights excepted to, or even discussed, before himself. We know that sovereigns in other countries, where the assertion of absolute regal power is as high as the assertion of absolute power in any politic body can possibly be here, have received many petitions in direct opposition to many of their claims of prerogative; have listened to them; condescended to discuss and to give answers to them. This refusal to admit even the discussion of any part of an undefined prerogative will naturally tend to annihilate any privilege that can be claimed by every inferior dependent community, and every subordinate order in the state.

The next maxim, which has been put as a bar to any plan of accommodation, is, "that no offer of terms of peace ought to be made before parliament is assured that these terms will be accepted." On this we beg to leave to represent to your Majesty, that if in all events the policy of this kingdom is to govern the people in your colonies as a free people, no mischief can possibly happen from a declaration to them, and to the world, of the manner and form in which parliament proposes that they shall enjoy the freedom it protects. It is an encouragement to the innocent and meritorious that they at least shall enjoy those advantages which they patiently expected, rather from the benignity of parliament than their own efforts. Persons more contumacious may also see that they are resisting terms of perhaps greater freedom and happiness than they are now in arms to obtain. The glory and propriety of offered mercy is neither tarnished nor weakened by the folly of those who refuse to take advantage of it.

We cannot think that the declaration of independency makes any natural difference in the reason and policy of the offer. No prince out of the possession of his dominions, and become a sovereign *de jure* only, ever thought it derogatory to his rights or his interests to hold out to his former subjects a distinct prospect of the advantages to be derived from his readmission, and a security for some of the most fundamental of those popular privileges in vindication of which he had been deposed. On the contrary, such offers have been almost uniformly made under similar circumstances. Besides, as your Majesty has been graciously pleased, in your speech from the throne, to declare your intention of restoring your people in the colonies to a state of law and liberty, no objection can possibly lie against defining what that law and liberty are; because those who offer, and those who are to receive, terms frequently differ most widely, and most materially, in the signification of these words, and in the objects to which they apply.

To say that we do not know, at this day, what the grievances of the colonies are (be they real or pretended), would be unworthy of us. But whilst we are thus waiting to be informed of what we perfectly know, we weaken the powers of the commissioners; we delay, perhaps we lose, the happy hour of peace; we are wasting the substance of both countries; we are continuing the effusion of human, of Christian, of English blood.

We are sure that we must have your Majesty's heart along with us, when we declare in favour of mixing something conciliatory with our force. Sir, we abhor the idea of making a conquest of our countrymen. We wish that they may yield to well ascertained, well authenticated, and well secured terms of reconciliation; not that your Majesty should owe the recovery of your dominions to their

total waste and destruction. Humanity will not permit us to entertain such a desire; nor will the reverence we bear to the civil rights of mankind make us even wish that questions of great difficulty, of the last importance, and lying deep in the vital principles of the British constitution, should be solved by the arms of foreign mercenary soldiers.

It is not, Sir, from a want of the most inviolable duty to your Majesty, not from a want of a partial and passionate regard to that part of your empire in which we reside, and which we wish to be supreme, that we have hitherto withstood all attempts to render the supremacy of one part of your dominions inconsistent with the liberty and safety of all the rest. The motives of our opposition are found in those very sentiments which we are supposed to violate. For we are convinced beyond a doubt that a system of dependence, which leaves no security to the people for any part of their freedom in their own hands, cannot be established in any inferior member of the British empire, without consequentially destroying the freedom of that very body in favour of whose boundless pretensions such a scheme is adopted. We know and feel that arbitrary power over distant regions is not within the competence, nor to be exercised agreeably to the forms, or consistently with the spirit, of great popular assemblies. If such assemblies are called to a nominal share in the exercise of such power, in order to screen, under general participation, the guilt of desperate measures, it tends only the more deeply to corrupt the deliberative character of those assemblies, in training them to blind obedience; in habituating them to proceed upon grounds of fact, with which they can rarely be sufficiently acquainted, and in rendering them executive instruments of designs, the bottom of which they cannot possibly fathom.

To leave any real freedom to parliament, freedom must be left to the colonies. A military government is the only substitute for civil liberty. That the establishment of such a power in America will utterly ruin our finances (though its certain effect) is the smallest part of our concern. It will become an apt, powerful, and certain engine for the destruction of our freedom here. Great bodies of armed men, trained to a contempt of popular assemblies representative of an English people; kept up for the purpose of exacting impositions without their consent, and maintained by that exaction; instruments in subverting, without any process of law, great ancient establishments and respected forms of government; set free from, and therefore above, the ordinary English tribunals of the country where they serve;—these men cannot so transform themselves, merely by crossing the sea, as to behold with love and reverence, and submit with profound obedience to the very same things in Great Britain which in America they had been taught to despise, and had

been accustomed to awe and humble. All your Majesty's troops, in the rotation of service, will pass through this discipline, and contract these habits. If we could flatter ourselves that this would not happen, we must be the weakest of men: we must be the worst, if we were indifferent whether it happened or not. What, gracious sovereign, is the empire of America to us, or the empire of the world, if we lose our own liberties? We deprecate this last of evils. We deprecate the effect of the doctrines which must support and countenance the government over conquered Englishmen.

As it will be impossible long to resist the powerful and equitable arguments in favour of the freedom of these unhappy people that are to be drawn from the principle of our own liberty; attempts will be made, attempts have been made, to ridicule and to argue away this principle; and to inculcate into the minds of your people other maxims of government and other grounds of obedience, than those which have prevailed at and since the glorious revolution. By degrees, these doctrines, by being convenient, may grow prevalent. The consequence is not certain; but a general change of principles rarely happens among a people without leading to a change of government.

Sir, your throne cannot stand secure upon the principles of unconditional submission and passive obedience; on powers exercised without the concurrence of the people to be governed; on acts made in defiance of their prejudices and habits; on acquiescence procured by foreign mercenary troops, and secured by standing armies. These may possibly be the foundation of other thrones: they must be the subversion of yours. It was not to passive principles in our ancestors that we owe the honour of appearing before a sovereign who cannot feel that he is a prince without knowing that we ought to be free. The revolution is a departure from the ancient course of the descent of this monarchy. The people at that time re-entered into their original rights; and it was because a positive law authorized what was then done, but because the freedom and safety of the subject, the origin and cause of all laws, required a proceeding paramount and superior to them. At that ever-memorable and instructive period, the letter of the law was superseded in favour of the substance of liberty. To the free choice, therefore, of the people, without either king or parliament, we owe that happy establishment, out of which both king and parliament were regenerated. From that great principle of liberty have originated the statutes, confirming and ratifying the establishment from which your Majesty derives your right to rule over us. Those statutes have not given us our liberties; our liberties have produced them. Every hour of your Majesty's reign your title stands upon the very same foundation

on which it was at first laid; and we do not know a better on which it can possibly be placed.

Convinced, Sir, that you cannot have different rights and a different security in different parts of your dominions, we wish to lay an even platform for your throne; and to give it an unmovable stability, by laying it on the general freedom of your people; and by securing to your Majesty that confidence and affection in all parts of your dominions which makes your best security and dearest title in this the chief seat of your empire.

Such, Sir, being amongst us the foundation of monarchy itself, much more clearly and much more peculiarly is it the ground of all parliamentary power. Parliament is a security provided for the protection of freedom, and not a subtle fiction contrived to amuse the people in its place. The authority of both Houses can still less than that of the Crown be supported upon different principles in different places; so as to be for one part of your subjects a protector of liberty, and for another a fund of despotism, through which prerogative is extended by occasional powers, whenever an arbitrary will finds itself straitened by the restrictions of law. Had it seemed good to parliament to consider itself as the indulgent guardian and strong protector of the freedom of the subordinate popular assemblies, instead of exercising its power to their annihilation, there is no doubt that it never could have been their inclination, because not their interest, to raise questions on the extent of parliamentary rights; or to enfeeble privileges which were the security of their own. Powers, evident from necessity, and not suspicious from an alarming mode or purpose in the exertion, would, as formerly they were, be cheerfully submitted to; and these would have been fully sufficient for conservation of unity in the empire, and for directing its wealth to one common centre. Another use has produced other consequences; and a power which refuses to be limited by moderation must either be lost, or find other more distinct and satisfactory limitations.

As for us, a supposed, or, if it could be, a real, participation in arbitrary power would never reconcile our minds to its establishment. We should be ashamed to stand before your Majesty boldly asserting, in our own favour, inherent rights which bind and regulate the Crown itself, and yet insisting on the exercise, in our own persons, of a more arbitrary sway over our fellow-citizens and fellow-freemen.

These, gracious sovereign, are the sentiments which we consider ourselves as bound, in justification of our present conduct, in the most serious and solemn manner to lay at your Majesty's feet. We have been called by your Majesty's writs and proclamations, and we have been authorised, either by hereditary privilege, or the choice

of your people, to confer and treat with your Majesty, in your highest councils, upon the arduous affairs of your kingdom. We are sensible of the whole importance of the duty which this constitutional summons implies. We know the religious punctuality of attendance which, in the ordinary course, it demands. It is no light cause which, even for a time, could persuade us to relax in any part of that attendance. The British empire is in convulsions which threaten its dissolution. Those particular proceedings which cause and inflame this disorder, after many years' incessant struggle, we find ourselves wholly unable to oppose, and unwilling to behold. All our endeavours having proved fruitless, we are fearful at this time of irritating, by contention, those passions which we have found it impracticable to compose by reason. We cannot permit ourselves to countenance, by the appearance of a silent assent, proceedings fatal to the liberty and unity of the empire; proceedings which exhaust the strength of all your Majesty's dominions, destroy all trust and dependence of our allies, and leave us both at home and abroad exposed to the suspicious mercy and uncertain inclinations of our neighbour and rival powers; to whom, by this desperate course, we are driving our countrymen for protection, and with whom we have forced them into connexions, and may bind them by habits and by interest:—an evil which no victories that may be obtained, no severities which may be exercised, ever will or can remove.

If but the smallest hope should from any circumstances appear of a return to the ancient maxims and true policy of this kingdom, we shall with joy and readiness return to our attendance, in order to give our hearty support to whatever means may be left for alleviating the complicated evils which oppress this nation.

If this should not happen, we have discharged our consciences by this faithful representation to your Majesty and our country; and, however few in number, or however we may be overborne by practices, whose operation is but too powerful, by the revival of dangerous, exploded principles, or by the misguided zeal of such arbitrary factions as formerly prevailed in this kingdom, and always to its detriment and disgrace, we have the satisfaction of standing forth and recording our names in assertion of those principles whose operation hath, in better times, made your Majesty a great prince, and the British dominions a mighty empire.

ADDRESS TO THE BRITISH COLONISTS OF NORTH AMERICA

THE very dangerous crisis, into which the British empire is brought, as it accounts for, so it justifies, the unusual step we take in addressing ourselves to you.

The distempers of the state are grown to such a degree of violence and malignity as to render all ordinary remedies vain and frivolous. In such a deplorable situation an adherence to the common forms of business appears to us rather as an apology to cover a supine neglect of duty, than the means of performing it in a manner adequate to the exigency that presses upon us. The common means we have already tried, and tried to no purpose. As our last resource, we turn ourselves to you. We address you merely in our private capacity; vested with no other authority than what will naturally attend those, in whose declarations of benevolence you have no reason to apprehend any mixture of dissimulation or design.

We have this title to your attention: we call upon it in a moment of the utmost importance to us all. We find, with infinite concern, that arguments are used to persuade you of the necessity of separating yourselves from your ancient connexion with your parent country, grounded on a supposition that a general principle of alienation and enmity to you had pervaded the whole of this kingdom; and that there does no longer subsist between you and us any common and kindred principles, upon which we can possibly unite consistently with those ideas of liberty in which you have justly placed your whole happiness.

If this fact were true, the inference drawn from it would be irresistible. But nothing is less founded. We admit, indeed, that violent addresses have been procured with uncommon pains by wicked and designing men, purporting to be the genuine voice of the whole people of England; that they have been published by authority here; and made known to you by proclamations; in order, by despair and resentment, incurably to poison your minds against the origin of your race, and to render all cordial reconciliation between us utterly impracticable. The same wicked men, for the same bad purposes,

have so far surprised the justice of parliament, as to cut off all communication betwixt us, except what is to go in their own fallacious and hostile channel.

But we conjure you by the invaluable pledges, which have hitherto united, and which we trust will hereafter lastingly unite us, that you do not suffer yourselves to be persuaded, or provoked, into an opinion, that you are at war with this nation. Do not think, that the whole, or even the uninfluenced majority, of Englishmen in this island are enemies to their own blood on the American continent. Much delusion has been practised; much corrupt influence treacherously employed. But still a large, and we trust the largest and soundest, part of this kingdom perseveres in the most perfect unity of sentiments, principles, and affections, with you. It spreads out a large and liberal platform of common liberty, upon which we may all unite for ever. It abhors the hostilities which have been carried on against you, as much as you who feel the cruel effect of them. It has disclaimed, in the most solemn manner, at the foot of the throne itself, the addresses, which tended to irritate your sovereign against his colonies. We are persuaded that even many of those who unadvisedly have put their hands to such intemperate and inflammatory addresses, have not at all apprehended to what such proceedings naturally lead; and would sooner die, than afford them the least countenance, if they were sensible of their fatal effects on the union and liberty of the empire.

For ourselves, we faithfully assure you that we have ever considered you as rational creatures; as free agents; as men willing to pursue, and able to discern, your own true interest. We have wished to continue united with you, in order that a people of one origin and one character should be directed to the rational objects of government by joint counsels, and protected in them by a common force. Other subordination in you we require none. We have never pressed that argument of general union to the extinction of your local, natural, and just privileges. Sensible of what is due both to the dignity and weakness of man, we have never wished to place over you any government, over which, in great fundamental points, you should have no sort of check or control in your own hands, or which should be repugnant to your situation, principles, and character.

No circumstances of fortune, you may be assured, will ever induce us to form, or tolerate, any such design. If the disposition of Providence (which we deprecate) should even prostrate you at our feet, broken in power and in spirit, it would be our duty and inclination to revive, by every practical means, that free energy of mind, which a fortune unsuitable to your virtue had damped and dejected; and to put you voluntarily in possession of those very privileges which you had in vain attempted to assert by arms. For we solemnly

declare, that although we should look upon a separation from you as a heavy calamity (and the heavier, because we know you must have your full share in it), yet we had much rather see you totally independent of this Crown and kingdom, than joined to it by so unnatural a conjunction as that of freedom with servitude:—a conjunction which, if it were at all practicable, could not fail in the end of being more mischievous to the peace, prosperity, greatness, and power of this nation, than beneficial, by an enlargement of the bounds of nominal empire.

But because, brethren, these professions are general, and such as even enemies may make, when they reserve to themselves the construction of what servitude and what liberty are, we inform you, that we adopt your own standard of the blessing of free government. We are of opinion that you ought to enjoy the sole and exclusive right of freely granting, and applying to the support of your administration, what God has freely granted as a reward to your industry. And we do not confine this immunity from exterior coercion in this great point solely to what regards your local establishment, but also to what may be thought proper for the maintenance of the whole empire. In this resource we cheerfully trust and acquiesce: satisfied by evident reason that no other expectation of revenue can possibly be given by free men; and knowing, from an experience uniform both on yours and on our side of the ocean, that such an expectation has never yet been disappointed. We know of no road to your coffers but through your affections.

To manifest our sentiments the more clearly to you and to the world on this subject; we declare our opinion, that if no revenue at all, which, however, we are far from supposing, were to be obtained from you to this kingdom, yet as long as it is our happiness to be joined with you in bonds of fraternal charity and freedom, with an open and flowing commerce between us, one principle of enmity and friendship pervading, and one right of war and peace directing, the strength of the whole empire, we are likely to be, at least, as powerful as any nation, or as any combination of nations, which in the course of human events may be formed against us. We are sensible that a very large proportion of the wealth and power of every empire must necessarily be thrown upon the presiding state. We are sensible that such a state ever has borne, and ever must bear, the greatest part, and sometimes the whole, of the public expenses: and we think her well indemnified for that (rather apparent than real) inequality of charge, in the dignity and pre-eminence she enjoys, and in the superior opulence which, after all charges defrayed, must necessarily remain at the centre of affairs. Of this principle we are not without evidence in our remembrance (not yet effaced) of the glorious and happy days of this empire.

We are, therefore, incapable of that prevaricating style, by which, when taxes without your consent are to be extorted from you, this nation is represented as in the lowest state of impoverishment and public distress; but when we are called upon to oppress you by force of arms, it is painted as scarcely feeling its impositions, abounding with wealth, and inexhaustible in its resources.

We also reason and feel as you do on the invasion of your charters. Because the charters comprehend the essential forms by which you enjoy your liberties, we regard them as most sacred, and by no means to be taken away or altered without process, without examination, and without hearing, as they have lately been. We even think that they ought by no means to be altered at all but at the desire of the greater part of the people who live under them. We cannot look upon men as delinquents in the mass; much less are we desirous of lording over our brethren, insulting their honest pride, and wantonly overturning establishments judged to be just and convenient by the public wisdom of this nation at their institution; and which long and inveterate use has taught you to look up to with affection and reverence. As we disapproved of the proceedings with regard to the forms of your constitution, so we are equally tender of every leading principle of free government. We never could think with approbation of putting the military power out of the coercion of the civil justice in the country where it acts.

We disclaim also any sort of share in that other measure which has been used to alienate your affections from this country, namely, the introduction of foreign mercenaries. We saw their employment with shame and regret, especially in numbers so far exceeding the English forces as in effect to constitute vassals who have no sense of freedom, and strangers who have no common interest or feelings, as the arbiters of our unhappy domestic quarrel.

We likewise saw with shame the African slaves, who had been sold to you on public faith, and under the sanction of acts of parliament, to be your servants and your guards, employed to cut the throats of their masters.

You will not, we trust, believe that, born in a civilised country, formed to gentle manners, trained in a merciful religion, and living in enlightened and polished times where even foreign hostility is softened from its original sternness, we could have thought of letting loose upon you, our late beloved brethren, these fierce tribes of savages and caninibals, in whom the traces of human nature are effaced by ignorance and barbarity. We rather wished to have joined with you in bringing gradually that unhappy part of mankind into civility, order, piety, and virtuous discipline, than to have confirmed their evil habits, and increased their natural ferocity, by fleshing them in the slaughter of you, whom our wiser and better ancestors

had sent into the wilderness, with the express view of introducing, along with our holy religion, its humane and charitable manners. We do not hold that all things are lawful in war. We should think that every barbarity, in fire, in wasting, in murders, in tortures, and other cruelties too horrible, and too full of turpitude, for Christian mouths to utter, or ears to hear, if done at our instigation by those who we know will make war thus if they make it at all, to be to all intents and purposes as if done by ourselves. We clear ourselves to you our brethren, to the present age, and to future generations, to our king and our country, and to Europe, which as a spectator beholds this tragic scene, of every part or share in adding this last and worst of evils to the inevitable mischiefs of a civil war.

We do not call you rebels and traitors. We do not call for the vengeance of the Crown against you. We do not know how to qualify millions of our countrymen, contending with one heart for an admission to privileges which we have ever thought our own happiness and honour, by odious and unworthy names. On the contrary, we highly revere the principles on which you act, though we lament some of their effects. Armed as you are, we embrace you as our friends, and as our brethren, by the best and dearest ties of relation.

We view the establishment of the English colonies on principles of liberty as that which is to render this kingdom venerable to future ages. In comparison of this we regard all the victories and conquests of our warlike ancestors, or of our own times, as barbarous, vulgar distinctions, in which many nations, whom we look upon with little respect or value, have equalled if not far exceeded us. This is the peculiar and appropriated glory of England. Those who have and who hold to that foundation of common liberty, whether on this or on your side of the ocean, we consider as the true, and the only true, Englishmen. Those who depart from it, whether there or here, are attainted corrupted in blood, and wholly fallen from their original rank and value. They are the real rebels to the fair constitution and just supremacy of England.

We exhort you, therefore, to cleave for ever to those principles, as being the true bond of union in this empire; and to show, by a manly perseverance, that the sentiments of honour, and the rights of mankind, are not held by the uncertain events of war, as you have hitherto shown a glorious and affecting example to the world that they are not dependent on the ordinary conveniences and satisfactions of life.

Knowing no other arguments to be used to men of liberal minds, it is upon these very principles, and these alone, we hope and trust that no flattering and no alarming circumstances shall permit you to listen to the seductions of those who would alienate you from your

dependence on the Crown and parliament of this kingdom. That very liberty, which you so justly prize above all things, originated here: and it may be very doubtful whether, without being constantly fed from the original fountain, it can be at all perpetuated or preserved in its native purity and perfection. Untried forms of government may, to unstable minds, recommend themselves even by their novelty. But you will do well to remember that England has been great and happy under the present limited monarchy (subsisting in more or less vigour and purity) for several hundred years. None but England can communicate to you the benefits of such a constitution. We apprehend you are not now, nor for ages are likely to be, capable of that form of constitution in an independent state. Besides, let us suggest to you our apprehensions that your present union (in which we rejoice, and which we wish long to subsist) cannot always subsist without the authority and weight of this great and long-respected body, to equipoise, and to preserve you amongst yourselves in a just and fair equality. It may not even be impossible that a long course of war with the administration of this country may be but a prelude to a series of wars and contentions among yourselves, to end, at length (as such scenes have too often ended), in a species of humiliating repose, which nothing but the preceding calamities would reconcile to the dispirited few who survived them. We allow that even this evil is worth the risk to men of honour, when rational liberty is at stake, as in the present case we confess and lament that it is. But if ever a real security, by parliament, is given against the terror or the abuse of unlimited power, and after such security given you should persevere in resistance, we leave you to consider whether the risk is not incurred without an object; or incurred for an object infinitely diminished by such concessions in its importance and value.

As to other points of discussion, when these grand fundamentals of your grants and charters are once settled and ratified by clear parliamentary authority, as the ground for peace and forgiveness on our side, and for a manly and liberal obedience on yours, treaty, and a spirit of reconciliation, will easily and securely adjust whatever may remain. Of this we give you our word, that so far as we are at present concerned, as if by any event we should become more concerned hereafter, you may rest assured, upon the pledges of honour not forfeited, faith not violated, and uniformity of character and profession not yet broken, we at least, on these grounds, will never fail you.

Respecting your wisdom, and valuing your safety, we do not call upon you to trust your existence to your enemies. We do not advise you to an unconditional submission. With satisfaction we assure you that almost all in both Houses (however unhappily they

have been deluded, so as not to give any immediate effect to their opinion) disclaim that idea. You can have no friends in whom you cannot rationally confide. But parliament is your friend from the moment in which, removing its confidence from those who have constantly deceived its good intentions, it adopts the sentiments of those who have made sacrifices (inferior indeed to yours), but have, however, sacrificed enough to demonstrate the sincerity of their regard and value for your liberty and prosperity.

Arguments may be used to weaken your confidence in that public security; because, from some unpleasant appearances, there is a suspicion that parliament itself is somewhat fallen from its independent spirit. How far this supposition may be founded in fact we are unwilling to determine. But we are well assured from experience, that even if all were true that is contended for, and in the extent, too, in which it is argued, yet as long as the solid and well-disposed forms of this constitution remain, there ever is within parliament itself a power of renovating its principles, and effecting a self-reformation, which no other plan of government has ever contained. This constitution has therefore admitted innumerable improvements, either for the correction of the original scheme, or for removing corruptions, or for bringing its principles better to suit those changes which have successively happened in the circumstances of the nation, or in the manners of the people.

We feel that the growth of the colonies is just a change of circumstances; and that our present dispute is an exigency as pressing as any which ever demanded a revision of our government. Public troubles have often called upon this country to look into its constitution. It has ever been bettered by such a revision. If our happy and luxuriant increase of dominion, and our diffused population, have outgrown the limits of a constitution made for a contracted object, we ought to bless God, who has furnished us with this noble occasion for displaying our skill and beneficence in enlarging the scale of rational happiness, and of making the politic generosity of this kingdom as extensive as its fortune. If we set about this great work, on both sides, with the same conciliatory turn of mind, we may now, as in former times, owe even to our mutual mistakes, contentions, and animosities, the lasting concord, freedom, happiness, and glory of this empire.

Gentlemen, the distance between us, with other obstructions, has caused much misrepresentation of our mutual sentiments. We, therefore, to obviate them as well as we are able, take this method of assuring you of our thorough detestation of the whole war; and particularly the mercenary and savage war carried on or attempted against you: our thorough abhorrence of all addresses adverse to you, whether public or private; our assurances of an invariable affec-

tion towards you; our constant regard to your privileges and liberties; and our opinion of the solid security you ought to enjoy for them, under the paternal care and nurture of a protecting parliament.

Though many of us have earnestly wished that the authority of that august and venerable body, so necessary in many respects to the union of the whole, should be rather limited by its own equity and discretion, than by any bounds described by positive laws and public compacts; and though we felt the extreme difficulty, by any theoretical limitations, of qualifying that authority so as to preserve one part and deny another; and though you (as we gratefully acknowledge) had acquiesced most cheerfully under that prudent reserve of the constitution, at that happy moment, when neither you nor we apprehended a further return of the exercise of invidious powers, we are now as fully persuaded as you can be, by the malice, inconstancy, and perverse inquietude of many men, and by the incessant endeavours of an arbitrary faction, now too powerful, that our common necessities do require a full explanation and ratified security for your liberties and our quiet.

Although his Majesty's condescension in committing the direction of his affairs into the hands of the known friends of his family, and of the liberties of all his people, would, we admit, be a great means of giving repose to your minds, as it must give infinite facility to reconciliation, yet we assure you, that we think, with such a security as we recommend, adopted from necessity, and not choice, even by the unhappy authors and instruments of the public misfortunes, that the terms of reconciliation, if once accepted by parliament, would not be broken. We also pledge ourselves to you, that we should give, even to those unhappy persons, a hearty support in effectuating the peace of the empire; and every opposition in an attempt to cast it again into disorder.

When that happy hour shall arrive, let us in all affection recommend to you the wisdom of continuing, as in former times, or even in a more ample measure, the support of your government, and even to give to your administration some degree of reciprocal interest in your freedom. We earnestly wish you not to furnish your enemies, here or elsewhere, with any sort of pretexts for reviving quarrels by too reserved and severe or penurious an exercise of those sacred rights, which no pretended abuse in the exercise ought to impair, nor, by overstraining the principles of freedom, to make them less compatible with those haughty sentiments in others, which the very same principles may be apt to breed in minds not tempered with the utmost equity and justice.

The well-wishers of the liberty and union of this empire salute you, and recommend you most heartily to the Divine protection.

LETTER TO DR. BENJAMIN FRANKLIN

August, 1781.

DEAR SIR,—I feel as an honest man and as a good citizen ought to feel, the calamities of the present unhappy war. The only part, however, of those calamities which personally affects myself is, that I have been obliged to discontinue my intercourse with you; but that one misfortune I must consider as equivalent to many. I may, indeed, with great truth, assure you, that your friendship has always been an object of my ambition; and that, if a high and very sincere esteem of your talents and virtues could give me a title to it, I am not wholly unworthy of that honour. I flatter myself that your belief in the reality of these sentiments will excuse the liberty I take, of laying before you a matter in which I have no small concern. The application I make originates wholly from myself, and has not been suggested to me by any person whatsoever.

I have lately been informed with great certainty, and with no less surprise, that the congress have made an application for the return of my friend General Burgoyne to captivity in America, at a time when the exchange of almost all the rest of the convention officers has been completed. It is true that this requisition has been for the present withdrawn; but then, it may be renewed at every instant; and no arrangement has been made or proposed, which may prevent a thing on all accounts so very disagreeable, as to see the most opposite interests conspiring in the persecution of a man, formed, by the unparalleled candour and moderation of his mind, to unite the most discordant parties in his favour.

I own this proceeding of the congress fills me with astonishment. I am persuaded that some unusually artful management, or very unexampled delusion, has operated to produce an effect which cannot be accounted for on any of the ordinary principles of nature or of policy.

I shall not enter into the particulars of the convention under which this claim is made, nor into the construction of it, nor the execution. I am not, perhaps, capable of doing justice to the merits of the cause; and if I were, I am not disposed to put them upon any ground of argument, because (whatever others might and possibly ought to do) I am not pleading a point of strict right, but appealing to your known principals of honour and generosity, with the freedom and privileges

of an old friendship; and as I suppose you perfectly acquainted with the whole history of the extraordinary treatment General Burgoyne has met with, I am resolved not to show so much distrust in so sound a memory and so good a judgment as yours, as to attempt to refresh the one or to lead the other.

I am ready to admit that General Burgoyne has been and (as far as what is left him will suffer) is a very affectionate and a very jealous servant of the crown; and that in America he acted as an officer of the king (so long as fortune favoured him) with great abilities, and distinguished fidelity, activity, and spirit. You, my dear sir, who have made such astonishing exertions in the cause which you espouse, and are so deeply read in human nature and in human morals, know better than anybody, that men will and that sometimes they are bound to take very different views and measures of their duty from local and from professional situation; and that we may all have equal merit in extremely different lines of conduct. You know that others may deserve the whole of your admiration in a cause, in which your judgment leads you to oppose them. But whatever may be our opinions on the origin of this fatal war, I assure you, General Burgoyne has the merit of never having driven it on with violence, or fostered or kept it alive by any evil arts, or aggravated its natural mischiefs by unnecessary rigor; but has behaved on all occasions with that temper which becomes a great military character, which loves nothing so well in the profession, as the means it so frequently furnishes of splendid acts of generosity and humanity.

You have heard of the sacrifices he has made to his nice sense of honour on this side of the water—sacrifices far beyond the just demands of the principle to which they were made. This has been no advantage to the country where he was piqued to it. Shall America, too, call for sacrifices that are still more severe, and of full as little advantage to those who demand them? I know the rigour of political necessity; but I see here as little of necessity, or even expedience, as of propriety. I know the respect that is due to all public bodies; but none of them are exempt from mistake; and the most disrespectful thing that can be done towards them is to suppose them incapable of correcting an error.

If I were not fully persuaded of your liberal and manly way of thinking, I should presume, in the hostile situation in which I stand, to make an application to you. But in this piece of experimental philosophy I run no risk of offending you. I apply not to the ambassador of America, but to Dr. Franklin, the philosopher,—the friend and the lover of his species. In that light, whatever colour politics may take,—I shall ever have the honour to be, dear sir, etc., etc.,

LETTER FROM BENJAMIN FRANKLIN TO EDMUND BURKE

PASSY, October 15, 1781.

SIR,—I received but a few days ago your very friendly letter of August last, on the subject of General Burgoyne.

Since the foolish part of mankind will make wars from time to time with each other, not having sense enough otherwise to settle their differences, it certainly becomes the wiser part, who cannot prevent these wars, to alleviate as much as possible the calamities attending them.

Mr. Burke always stood high in my esteem; his affectionate concern for his friend renders him still more amiable, and makes the honour he does me in admitting me of the number still more precious.

I do not think the congress have any wish to persecute General Burgoyne. I never heard till I received your letter that they had recalled him. If they have made such a resolution, it must be, I suppose, a conditional one;—to take place in case their offer of exchanging him for Mr. Laurens should not be accepted—a resolution intended to enforce that offer.

I have just received an authentic copy of the resolve containing that offer, and authorizing me to make it. As I have no communication with your ministers, I send it enclosed to you. If you can find any means of negotiating this business, I am sure the restoring another worthy man to his family and friends will be an addition to your pleasure.—With great and invariable respect and affection,

I am, Sir,

Your most humble and most obedient Servant,

B. FRANKLIN.

AN ESSAY ON THE RIGHTS OF MAN

BY
THOMAS PAINE

(Thomas Paine, English Theist and economist, was born in Norfolk, 1737, of Quaker stock. Advocating American independence, he published a pamphlet entitled "Common Sense" in 1776. His "Crisis" followed this work and in 1787 published a reply to Burke's attack on the principles of the French Revolution, "The Rights of Man". Another of his works was "The Age of Reason", which is a plea for Theism. He died in 1809.)

TO
GEORGE WASHINGTON
PRESIDENT OF THE UNITED STATES OF AMERICA

SIR,

I present you a small Treatise in defence of those Principles of Freedom which your exemplary Virtue hath so eminently contributed to establish. That the Rights of Man may become as universal as your Benevolence can wish, and that you may enjoy the Happiness of seeing the New World regenerate the Old, is the prayer of

Sir,

Your much obliged, and

Obedient humble Servant,

THOMAS PAINE.

PREFACE TO THE ENGLISH EDITION

FROM the part Mr. Burke took in the American Revolution, it was natural that I should consider him a friend to mankind; and as our acquaintance commenced on that ground, it would have been more agreeable to me to have had cause to continue in that opinion than to change it.

At the time Mr. Burke made his violent speech last winter in the English Parliament against the French Revolution and the National Assembly, I was in Paris, and had written him but a short time before to inform him how prosperously matters were going on. Soon after this I saw his advertisement of the pamphlet he intended to publish. As the attack was to be made in a language but little

studied, and less understood in France, and as everything suffers by translation, I promised some of the friends of the Revolution in that country what whenever Mr. Burke's pamphlet came forth I would answer it. This appeared to me the more necessary to be done when I saw the flagrant misrepresentations which Mr. Burke's pamphlet contains; and that while it is an outrageous abuse on the French Revolution and the principles of Liberty, it is an imposition on the rest of the world.

I am the more astonished and disappointed at this conduct in Mr. Burke, as (from the circumstance I am going to mention) I had formed other expectations.

I had seen enough of the miseries of war to wish it might never more have existence in the world, and that some other mode might be found out to settle the differences that should occasionally arise in the neighbourhood of Nations. This certainly might be done if Courts were disposed to set honestly about it, or if countries were enlightened enough not to be made the dupes of Courts. The people of America had been bred up in the same prejudices against France, which at that time characterised the people of England; but experience and an acquaintance with the French Nation have most effectually shown to the Americans the falsehood of those prejudices; and I do not believe that a more cordial and confidential intercourse exists between any two countries than between America and France.

When I came to France, in the Spring of 1787, the Archbishop of Thoulouse was then Minister, and at that time highly esteemed. I became much acquainted with the private Secretary of that Minister, a man of an enlarged benevolent heart; and found that his sentiments and my own perfectly agreed with respect to the madness of war, and the wretched impolicy of two nations like England and France, continually worrying each other, to no other end than that of a mutual increase of burdens and taxes. That I might be assured I had not misunderstood him, nor he me, I put the substance of our opinions into writing and sent it to him; subjoining a request, that if I should see among the people of England any disposition to cultivate a better understanding between the two nations than had hitherto prevailed, how far I might be authorised to say that the same disposition prevailed on the part of France? He answered me by letter in the most unreserved manner, and that not for himself only, but for the Minister, with whose knowledge the letter was declared to be written.

I put this letter into the hands of Mr. Burke almost three years ago; and left it with him, where it still remains; hoping, and at the same time naturally expecting, from the opinion I had conceived of him, that he would find some opportunity of making good use of it, for the purpose of removing those errors and prejudices which two

neighbouring nations, from the want of knowing each other, had entertained to the injury of both.

When the French Revolution broke out, it certainly afforded to Mr. Burke an opportunity of doing some good, had he been disposed to it; instead of which, no sooner did he see the old prejudices wearing away, than he immediately began sowing the seeds of a new inveteracy, as if he were afraid that England and France would cease to be enemies. That there are men in all countries who get their living by war, and by keeping up the quarrels of Nations, is as shocking as it is true; but when those who are concerned in the government of a country make it their study to sow discord, and cultivate prejudices between Nations, it becomes the more unpardonable.

With respect to a paragraph in this work alluding to Mr. Burke's having a pension, the report has been some time in circulation, at least two months; and as a person is often the last to hear what concerns him the most to know, I have mentioned it that Mr. Burke may have an opportunity of contradicting the rumour, if he thinks proper.

THOMAS PAINE.

RIGHTS OF MAN

By

THOMAS PAINE

PART THE FIRST

AMONG the incivilities by which nations or individuals provoke and irritate each other, Mr. Burke's pamphlet on the French Revolution is an extraordinary instance. Neither the people of France, nor the National Assembly, were troubling themselves about the affairs of England, or the English Parliament; and why Mr. Burke should commence an unprovoked attack upon them, both in Parliament and in public, is a conduct that cannot be pardoned on the score of manners, nor justified on that of policy.

There is scarcely an epithet of abuse to be found in the English language, with which Mr. Burke has not loaded the French Nation and the National Assembly. Everything which rancour, prejudice, ignorance or knowledge could suggest, is poured forth in the copious fury of near four hundred pages. In the strain and on the plan Mr. Burke was writing, he might have written on to as many thousands. When the tongue or the pen is let loose in a phrenzy of passion, it is the man, and not the subject, that becomes exhausted.

Hitherto Mr. Burke has been mistaken and disappointed in the opinions he had formed of the affairs of France; but such is the ingenuity of his hope, or the malignancy of his despair, that it furnishes him with new pretences to go on. There was a time when it was impossible to make Mr. Burke believe there would be any Revolution in France. His opinion then was, that the French had neither spirit to undertake it nor fortitude to support it; and now that there is one, he seeks an escape by condemning it.

Not sufficiently content with abusing the National Assembly, a great part of his work is taken up with abusing Dr. Price (one of the best-hearted men that lives) and the two societies in England known by the name of the Revolution Society and the Society for Constitutional Information.

Dr. Price had preached a sermon on the 4th of November, 1789,

being the anniversary of what is called in England the Revolution, which took place 1688. Mr. Burke, speaking of this sermon, says, "The political Divine proceeds dogmatically to assert, that by the principles of the Revolution, the people of England have acquired three fundamental rights:

1. To choose their own governors.
2. To cashier them for misconduct.
3. To frame a government for ourselves."

Dr. Price does not say that the right to do these things exists in this or in that person, or in this or in that description of persons, but that it exists in the whole; that it is a right resident in the Nation. Mr. Burke, on the contrary, denies that such a right exists in the Nation, either in whole or in part, or that it exists anywhere; and, what is still more strange and marvellous, he says, "that the people of England utterly disclaim such a right, and that they will resist the practical assertion of it with their lives and fortunes." That men should take up arms and spend their lives and fortunes, not to maintain their rights, but to maintain they have not rights, is an entirely new species of discovery, and suited to the paradoxical genius of Mr. Burke.

The method which Mr. Burke takes to prove that the people of England have no such rights, and that such rights do not now exist in the Nation, either in whole or in part, or anywhere at all, is of the same marvellous and monstrous kind with what he has already said; for his arguments are that the persons, or the generation of persons, in whom they did exist, are dead, and with them the right is dead also. To prove this, he quotes a declaration made by parliament about a hundred years ago, to William and Mary, in these words: "The Lords Spiritual and Temporal, and Commons, do, in the name of the people aforesaid (meaning the people of England then living), most humbly and faithfully submit themselves, their heirs and posterities, for ever." He also quotes a clause of another act of Parliament made in the same reign, the terms of which, he says, "bind us (meaning the people of that day), our heirs and our posterity, to them, their heirs and posterity, to the end of time."

Mr. Burke conceives his point sufficiently established by producing those clauses, which he enforces by saying that they exclude the right of the Nation for ever. And not yet content with making such declarations, repeated over and over again, he farther says, "that if the people of England possessed such a right before the Revolution (which he acknowledges to have been the case, not only in England, but throughout Europe, at an early period), yet that the English Nation did, at the time of the Revolution, most solemnly renounce and abdicate it, for themselves, and for their posterity for ever."

As Mr. Burke occasionally applies the poison drawn from his horrid

principles (if it is not prophanation to call them by the name of principles) not only to the English Nation, but to the French Revolution and the National Assembly, and charges that august, illuminated and illuminating body of men with the epithet of usurpers, I shall, *sans cérémonie*, place another system of principles in opposition to his.

The English Parliament of 1688 did a certain thing, which, for themselves and their constituents, they had a right to do, and which it appeared right should be done: but, in addition to this right, which they possessed by delegation, they set up another right by assumption, that of binding and controuling posterity to the end of time. The case, therefore, divides itself into two parts; the right which they possessed by delegation, and the right which they set up by assumption. The first is admitted; but with respect to the second, I reply—

There never did, there never will, and there never can, exist a Parliament, or any description of men, or any generation of men, in any country, possessed of the right or the power of binding and controuling posterity to the "end of time," or of commanding for ever how the world shall be governed, or who shall govern it; and therefore all such clauses, acts or declarations by which the makers of them attempt to do what they have neither the right nor the power to do, nor the power to execute, are in themselves null and void. Every age and generation must be as free to act for itself in all cases as the ages and generations which preceded it. The vanity and presumption of governing beyond the grave is the most ridiculous and insolent of all tyrannies. Man has no property in man; neither has any generation a property in the generations which are to follow. The Parliament or the people of 1688, or of any other period, had no more right to dispose of the people of the present day, or to bind or to controul them in any shape whatever, than the Parliament or the people of the present day have to dispose of, bind or controul those who are to live a hundred or a thousand years hence. Every generation is, and must be, competent to all the purposes which its occasions require. It is the living, and not the dead, that are to be accommodated. When man ceases to be, his power and his wants cease with him; and having no longer any participation in the concerns of this world, he has no longer any authority in directing who shall be its governors, or how its Government shall be organised, or how administered.

I am not contending for nor against any form of Government, nor for nor against any party, here or elsewhere. That which a whole Nation chooses to do, it has a right to do. Mr. Burke says, No. Where, then, does the right exist? I am contending for the rights of the living, and against their being willed away, and controuled and

contracted for, by the manuscript assumed authority of the dead; and Mr. Burke is contending for the authority of the dead over the rights and freedom of the living. There was a time when Kings disposed of their Crowns by will upon their deathbeds, and consigned the people, like beasts of the field, to whatever successor they appointed. This is now so exploded as scarcely to be remembered, and so monstrous as hardly to be believed; but the Parliamentary clauses upon which Mr. Burke builds his political church are of the same nature.

The laws of every country must be analogous to some common principle. In England no parent or master, nor all the authority of Parliament, omnipotent as it has called itself, can bind or controul the personal freedom even of an individual beyond the age of twenty-one years. On what ground of right, then, could the Parliament of 1688, or any other Parliament, bind all posterity for ever?

Those who have quitted the world, and those who are not yet arrived at it, are as remote from each other as the utmost stretch of mortal imagination can conceive. What possible obligation, then, can exist between them; what rule or principle can be laid down that of two non-entities, the one out of existence and the other not in, and who never can meet in this world, the one should controul the other to the end of time?

In England it is said that money cannot be taken out of the pockets of the people without their consent. But who authorised, or who could authorise, the Parliament of 1688 to controul and take away the freedom of posterity (who were not in existence to give or to withhold their consent), and limit and confine their right of acting in certain cases for ever?

A greater absurdity cannot present itself to the understanding of man than what Mr. Burke offers to his readers. He tells them, and he tells the world to come, that a certain body of men who existed a hundred years ago, made a law, and that there does not now exist in the Nation, nor ever will, nor ever can, a power to alter it. Under how many subtilties or absurdities has the divine right to govern been imposed on the credulity of mankind! Mr. Burke has discovered a new one, and he has shortened his journey to Rome by appealing to the power of this infallible Parliament of former days; and he produces what it has done as of divine authority, for that power must certainly be more than human which no human power to the end of time can alter.

But Mr. Burke has done some service, not to his cause, but to his country, by bringing those clauses into public view. They serve to demonstrate how necessary it is at all times to watch against the attempted encroachment of power, and to prevent its running to excess. It is somewhat extraordinary that the offense for which James II. was expelled, that of setting up power by assumption,

should be re-acted, under another shape and form, by the Parliament that expelled him. It shows that the rights of man were but imperfectly understood at the Revolution; for certain it is that the right which that Parliament set up by assumption (for by delegation it had it not, and could not have it, because none could give it) over the persons and freedom of posterity for ever, was of the same tyrannical unfounded kind which James attempted to set up over the Parliament and the Nation, and for which he was expelled. The only difference is (for in principle they differ not) that the one was an usurper over the living, and the other over the unborn; and as the one has no better authority to stand upon than the other, both of them must be equally null and void, and of no effect.

From what, or from whence, does Mr. Burke prove the right of any human power to bind posterity for ever? He has produced his clauses, but he must produce also his proofs that such a right existed, and show how it existed. If it ever existed it must now exist, for whatever appertains to the nature of man cannot be annihilated by man. It is the nature of man to die, and he will continue to die as long as he continues to be born. But Mr. Burke has set up a sort of political Adam, in whom all posterity are bound for ever; he must, therefore, prove that his Adam possessed such a power, or such a right.

The weaker any cord is the less will it bear to be stretched, and the worse is the policy to stretch it, unless it is intended to break it. Had any one proposed the overthrow of Mr. Burke's positions, he would have proceeded as Mr. Burke has done. He would have magnified the authorities, on purpose to have called the right of them into question; and the instant the question of right was started, the authorities must have been given up.

It requires but a very small glance of thought to perceive that altho' laws made in one generation often continue in force through succeeding generations, yet that they continue to derive their force from the consent of the living. A law not repealed continues in force, not because it cannot be repealed, but because it is not repealed; and the non-repealing passes for consent.

But Mr. Burke's clauses have not even this qualification in their favour. They become null, by attempting to become immortal. The nature of them precludes consent. They destroy the right which they might have, by grounding it on a right which they cannot have. Immortal power is not a human right, and therefore cannot be a right of Parliament. The Parliament of 1688 might as well have passed an act to have authorized themselves to live for ever, as to make their authority live for ever. All, therefore, that can be said of those clauses is that they are a formality of words, of as much import as if those who used them had addressed a congratulation to

themselves, and in the oriental stile of antiquity had said: O Parliament, live for ever!

The circumstances of the world are continually changing, and the opinions of men change also; and as Government is for the living, and not for the dead, it is the living only that has any right in it. That which may be thought right and found convenient in one age may be thought wrong and found inconvenient in another. In such cases, Who is to decide, the living, or the dead?

As almost one hundred pages of Mr. Burke's book are employed upon these clauses, it will consequently follow that if the clauses themselves, so far as they set up an assumed usurped dominion over posterity for ever, are unauthoritative, and in their nature null and void; that all his voluminous inferences, and declamation drawn therefrom, or founded thereon, are null and void also; and on this ground I rest the matter.

We now come more particularly to the affairs of France. Mr. Burke's book has the appearance of being written as instruction to the French Nation; but if I may permit myself the use of an extravagant metaphor, suited to the extravagance of the case, It is darkness attempting to illuminate light.

While I am writing this there are accidentally before me some proposals for a declaration of rights by the Marquis de la Fayette (I ask his pardon for using his former address, and do it only for distinction's sake) to the National Assembly, on the 11th of July, 1789, three days before the taking of the Bastille; and I cannot but remark with astonishment how opposite the sources are from which that gentleman and Mr. Burke draw their principles. Instead of referring to musty records and mouldy parchments to prove that the rights of the living are lost, "renounced and abdicated for ever," by those who are now no more, as Mr. Burke has done, M. de la Fayette applies to the living world, and emphatically says, "Call to mind the sentiments which Nature has engraved in the heart of every citizen, and which take a new force when they are solemnly recognised by all: For a Nation to love Liberty, it is sufficient that she knows it; and to be free, it is sufficient that she will it." How dry, barren, and obscure is the source from which Mr. Burke labours; and how ineffectual, though gay with flowers, are all his declamation and his arguments compared with these clear, concise, and soul-animating sentiments! Few and short as they are, they lead to a vast field of generous and manly thinking, and do not finish, like Mr. Burke's periods, with music in the ear, and nothing in the heart.

As I have introduced M. de la Fayette, I will take the liberty of adding an anecdote respecting his farewell address to the Congress of America in 1783, which occurred fresh to my mind, when I saw Mr. Burke's thundering attack on the French Revolution. M. de la

Fayette went to America at an early period of the war, and continued a volunteer in her service to the end. His conduct through the whole of that enterprise is one of the most extraordinary that is to be found in the history of a young man, scarcely then twenty years of age. Situated in a country that was like the lap of sensual pleasure, and with the means of enjoying it, how few are there to be found who would exchange such a scene for the woods and wildernesses of America, and pass the flowery years of youth in unprofitable danger and hardship! But such is the fact. When the war ended, and he was on the point of taking his final departure, he presented himself to Congress, and contemplating, in his affectionate farewell, the Revolution he had seen, expressed himself in these words: "May this great monument raised to Liberty, serve as a lesson to the oppressor, and an example to the oppressed!" When this address came to the hands of Dr. Franklin, who was then in France, he applied to Count Vergennes to have it inserted in the French Gazette, but never could obtain his consent. The fact was that Count Vergennes was an aristocratical despot at home, and dreaded the example of the American Revolution in France, as certain other persons now dread the example of the French Revolution in England; and Mr. Burke's tribute of fear (for in this light his book must be considered) runs parallel with Count Vergennes' refusal. But to return more particularly to his work—

"We have seen," says Mr. Burke, "the French rebel against a mild and lawful Monarch, with more fury, outrage, and insult, than any people has been known to rise against the most illegal usurper, or the most sanguinary tyrant." This is one among a thousand other instances, in which Mr. Burke shows that he is ignorant of the springs and principles of the French Revolution.

It was not against Louis XVI., but against the despotic principles of the government, that the Nation revolted. These principles had not their origin in him, but in the original establishment, many centuries back; and they were become too deeply rooted to be removed, and the Augean stable of parasites and plunderers too abominably filthy to be cleansed, by anything short of a complete and universal Revolution. When it becomes necessary to do a thing, the whole heart and soul should go into the measure, or not attempt it. That crisis was then arrived, and there remained no choice but to act with determined vigour, or not to act at all. The King was known to be the friend of the Nation, and this circumstance was favourable to the enterprise. Perhaps no man bred up in the style of an absolute King, ever possessed a heart so little disposed to the exercise of that species of power as the present King of France. But the principles of the Government itself still remained the same. The Monarch and the Monarchy were distinct and separate things; and it was against

the established despotism of the latter, and not against the person or principles of the former, that the revolt commenced, and the Revolution has been carried.

Mr. Burke does not attend to the distinction between men and principles; and, therefore, he does not see that a revolt may take place against the despotism of the latter, while there lies no charge of despotism against the former.

The natural moderation of Louis XVI. contributed nothing to alter the hereditary despotism of the Monarchy. All the tyrannies of former reigns, acted under that hereditary despotism, were still liable to be revived in the hands of a successor. It was not the respite of a reign that would satisfy France, enlightened as she then was become. A casual discontinuance of the practice of despotism, is not a discontinuance of its principles; the former depends on the virtue of the individual who is in immediate possession of the power; the latter, on the virtue and fortitude of the nation. In the case of Charles I. and James II. of England, the revolt was against the personal despotism of the men; whereas in France, it was against the hereditary despotism of the established government. But men who can consign over the rights of posterity for ever on the authority of a mouldy parchment, like Mr. Burke, are not qualified to judge of this Revolution. It takes in a field too vast for their views to explore, and proceeds with a mightiness of reason they cannot keep pace with.

But there are many points of view in which this Revolution may be considered. When despotism has established itself for ages in a country, as in France, it is not in the person of the King only that it resides. It has the appearance of being so in show, and in nominal authority; but it is not so in practice and in fact. It has its standard everywhere. Every office and department has its despotism, founded upon custom and usage. Every place has its Bastille, and every Bastille its despot. The original hereditary despotism resident in the person of the King, divides and subdivides itself into a thousand shapes and forms, till at last the whole of it is acted by deputation. This was the case in France; and against this species of despotism, proceeding on through an endless labyrinth of office till the source of it is scarcely perceptible, there is no mode of redress. It strengthens itself by assuming the appearance of duty, and tyrannises under the pretence of obeying.

When a man reflects on the condition which France was in from the nature of her Government, he will see other causes for revolt than those which immediately connect themselves with the person or character of Louis XVI. There were, if I may so express it, a thousand despotisms to be reformed in France, which had grown up under the hereditary despotism of the monarchy, and became so rooted

as to be in great measure independent of it. Between the Monarchy, the Parliament, and the Church, there was a rivalry of despotism; besides the feudal despotism operating locally, and the ministerial despotism operating everywhere. But Mr. Burke, by considering the King as the only possible object of a revolt, speaks as if France was a village, in which everything that passed must be known to its commanding officer, and no oppression could be acted but what he could immediately controul. Mr. Burke might have been in the Bastille his whole life, as well under Louis XVI. as Louis XIV., and neither the one nor the other have known that such a man as Mr. Burke existed. The despotic principles of the Government were the same in both reigns, though the dispositions of the men were as remote as tyranny and benevolence.

What Mr. Burke considers as a reproach to the French Revolution (that of bringing it forward under a reign more mild than the preceding ones) is one of its highest honours. The Revolutions that have taken place in other European countries, have been excited by personal hatred. The rage was against the man, and he became the victim. But, in the instance of France we see a revolution generated in the rational contemplation of the rights of man, and distinguishing from the beginning between persons and principles.

But Mr. Burke appears to have no idea of principles when he is contemplating Governments. "Ten years ago," says he, "I could have felicitated France on her having a Government, without inquiring what the nature of that Government was, or how it was administered." Is this the language of a rational man? Is it the language of a heart feeling as it ought to feel for the rights and happiness of the human race? On this ground, Mr. Burke must compliment all the Governments in the world, while the victims who suffer under them, whether sold into slavery, or tortured out of existence, are wholly forgotten. It is power, and not principles, that Mr. Burke venerates; and under this abominable depravity he is disqualified to judge between them. Thus much for his opinion as to the occasions of the French Revolution. I now proceed to other considerations.

I know a place in America called Point-no-Point, because as you proceed along the shore, gay and flowery as Mr. Burke's language, it continually recedes and presents itself at a distance before you; but when you have got as far as you can go, there is no point at all. Just thus it is with Mr. Burke's three hundred and fifty-six pages. It is therefore difficult to reply to him. But as the points he wishes to establish may be inferred from what he abuses, it is in his paradoxes that we must look for his arguments.

As to the tragic paintings by which Mr. Burke has outraged his own imagination, and seeks to work upon that of his readers, they are very well calculated for theatrical representation, where facts

are manufactured for the sake of show, and accommodated to produce, through the weakness of sympathy, a weeping effect. But Mr. Burke should recollect that he is writing history, and not plays, and that his readers will expect truth, and not the spouting rant of high-toned exclamation.

When we see a man dramatically lamenting in a publication intended to be believed that "The age of chivalry is gone! that The glory of Europe is extinguished for ever! that the unbought grace of life (if any one knows what it is), the cheap defence of nations, the nurse of manly sentiment and heroic enterprise is gone!" and all this because the Quixote age of chivalry nonsense is gone, what opinion can we form of his judgment, or what regard can we pay to his facts? In the rhapsody of his imagination he has discovered a world of windmills, and his sorrows are that there are no Quixotes to attack them. But if the age of Aristocracy, like that of Chivalry, should fall (and they had originally some connection), Mr. Burke, the trumpeter of the order, may continue his parody to the end, and finish with exclaiming: "Othello's occupation's gone!"

Notwithstanding Mr. Burke's horrid paintings, when the French Revolution is compared with the Revolutions of other countries, the astonishment will be that it is marked with so few sacrifices; but this astonishment will cease when we reflect that principles, and not persons, were the meditated objects of destruction. The mind of the nation was acted upon by a higher stimulus than what the consideration of persons could inspire, and sought a higher conquest than could be produced by the downfall of an enemy. Among the few who fell there do not appear to be any that were intentionally singled out. They all of them had their fate in the circumstances of the moment, and were not pursued with that long, cold-blooded, unabated revenge which pursued the unfortunate Scotch in the affair of 1745.

Through the whole of Mr. Burke's book I do not observe that the Bastille is mentioned more than once, and that with a kind of implication as if he were sorry it was pulled down, and wished it were built up again. "We have rebuilt Newgate," says he, "and tenanted the mansion; and we have prisons almost as strong as the Bastille for those who dare to libel the Queens of France." As to what a madman like the person called Lord G— G— might say, to whom Newgate is rather a bedlam than a prison, it is unworthy a rational consideration. It was a madman that libelled, and that is sufficient apology; and it afforded an opportunity for confining him, which was the things that was wished for. But certain it is that Mr. Burke, who does not call himself a madman (whatever other people may do), has libelled in the most unprovoked manner, and in the grossest stile of the most vulgar abuse, the whole representative authority of France, and yet Mr. Burke takes his seat in the British

House of Commons! From his violence and his grief; his silence on some points and his excess on others, it is difficult not to believe that Mr. Burke is sorry, extremely sorry, that arbitrary power, the power of the Pope and the Bastille, are pulled down.

Not one glance of compassion, not one commiserating reflection that I can find throughout his book, has he bestowed on those who lingered out the most wretched of lives, a life without hope in the most miserable of prisons. It is painful to behold a man employing his talents to corrupt himself. Nature has been kinder to Mr. Burke than he is to her. He is not affected by the reality of distress touching his heart, but by the showy resemblance of it striking his imagination. He pities the plumage, but forgets the dying bird. Accustomed to kiss the aristocratical hand that hath purloined him from himself, he degenerates into a composition of art, and the genuine soul of nature forsakes him. His hero or his heroine must be a tragedy-victim expiring in show, and not the real prisoner of misery, sliding into death in the silence of a dungeon.

As Mr. Burke has passed over the whole transaction of the Bastille (and his silence is nothing in his favour), and has entertained his readers with reflections on supposed facts distorted into real falsehoods, I will give, since he has not, some account of the circumstances which preceded that transaction. They will serve to show that less mischief could scarcely have accompanied such an event when considered with the treacherous and hostile aggravations of the enemies of the Revolution.

The mind can hardly picture to itself a more tremendous scene than what the city of Paris exhibited at the time of taking the Bastille, and for two days before and after, nor conceive the possibility of its quieting so soon. At a distance this transaction has appeared only as an act of heroism standing on itself, and the close political connection it had with the Revolution is lost in the brilliancy of the achievement. But we are to consider it as the strength of the parties brought man to man, and contending for the issue. The Bastille was to be either the prize or the prison of the assailants. The downfall of it included the idea of the downfall of despotism, and this compounded image was become as figuratively united as Bunyan's Doubting Castle and Giant Despair.

The National Assembly, before and at the time of taking the Bastille, was sitting at Versailles, twelve miles distance from Paris. About a week before the rising of the Parisians, and their taking the Bastille, it was discovered that a plot was forming, at the head of which was the Count d'Artois, the king's youngest brother, for demolishing the National Assembly, seizing its members, and thereby crushing, by a *coup de main*, all hopes and prospects of forming a free government. For the sake of humanity, as well as of freedom, it is well this plan

did not succeed. Examples are not wanting to show how dreadfully vindictive and cruel are all old Governments, when they are successful against what they call a revolt.

This plan must have been some time in contemplation; because, in order to carry it into execution, it was necessary to collect a large military force round Paris, and cut off the communication between that city and the National Assembly at Versailles. The troops destined for this service were chiefly the foreign troops in the pay of France, and who, for this particular purpose, were drawn from the distant provinces where they were then stationed. When they were collected to the amount of about twenty-five and thirty thousand, it was judged time to put the plan in execution. The ministry who were then in office, and who were friendly to the Revolution, were instantly dismissed and a new ministry formed of those who had concerted the project, among whom was Count de Broglio, and to his share was given the command of those troops. The character of this man as described to me in a letter which I communicated to Mr. Burke before he began to write his book, and from an authority which Mr. Burke well knows was good, was that of "a high-flying aristocrat, cool, and capable of every mischief."

While these matters were agitating, the National Assembly stood in the most perilous and critical situation that a body of men can be supposed to act in. They were the devoted victims, and they knew it. They had the hearts and wishes of their country on their side, but military authority they had none. The guards of Broglio surrounded the hall where the assembly sat, ready, at the word of command, to seize their persons, as had been done the year before to the Parliament of Paris. Had the National Assembly deserted their trust, or had they exhibited signs of weakness or fear, their enemies had been encouraged and the country depressed. When the situation they stood in, the cause they were engaged in and the crisis then ready to burst, which was to determine their personal and political fate and that of their country, and probably of Europe, are taken into one view, none but a heart callous with prejudice or corrupted by dependence can avoid interesting itself in their success.

The Archbishop of Vienne was at this time president of the National Assembly—a person too old to undergo the scene that a few days or a few hours might bring forth. A man of more activity and greater fortitude was necessary, and the National Assembly chose (under the form of a vice-president, for the presidency still resided in the Archbishop) M. de la Fayette; and this is the only instance of a vice-president being chosen. It was at the moment that this storm was pending (July 11th) that a declaration of rights was brought forward by M. de la Fayette; and is the same which is alluded to in page 17. It was hastily drawn up, and makes only a part of the more extensive

declaration of rights agreed upon and adopted afterwards by the National Assembly. The particular reason for bringing it forward at this moment (M. de la Fayette has since informed me) was that if the National Assembly should fail in the threatened destruction that then surrounded it, some traces of its principles might have the chance of surviving the wreck.

Everything now was drawing to a crisis. The event was to be freedom or slavery. On one side, an army of nearly thirty thousand men; on the other, an unarmed body of citizens; for the citizens of Paris, on whom the National Assembly must then immediately depend, were as unarmed and as undisciplined as the citizens of London are now. The French guards had given strong symptoms of their being attached to the national cause; but their numbers were small, not a tenth part of the force that Broglio commanded, and their officers were in the interest of Broglio.

Matters being now ripe for execution, the new ministry made their appearance in office. The reader will carry in his mind that the Bastille was taken the 14th of July; the point of time I am now speaking to is the 12th. Immediately on the news of the change of ministry reaching Paris, in the afternoon, all the playhouses and places of entertainment, shops and houses, were shut up. The change of ministry was considered as the prelude of hostilities, and the opinion was rightly founded.

The foreign troops began to advance towards the city. The Prince de Lambesc, who commanded a body of German cavalry, approached by the Palace of Louis XV., which connects itself with some of the streets. In his march, he insulted and struck an old man with his sword. The French are remarkable for their respect to old age; and the insolence with which it appeared to be done, uniting with the general fermentation they were in, produced a powerful effect, and a cry of "To arms! To arms!" spread itself in a moment over the city.

Arms they had none, nor scarcely any who knew the use of them; but desperate resolution, when every hope is at stake, supplies, for a while, the want of arms. Near where the Prince de Lambesc was drawn up, were large piles of stone collected for building the new bridge, and with these the people attacked the cavalry. A party of the French guards, upon hearing the firing, rushed from their quarters and joined the people; and night coming on, the cavalry retreated.

The streets of Paris, being narrow, are favourable for defence, and the loftiness of the houses, consisting of many stories, from which great annoyance might be given, secured them against nocturnal enterprises; and the night was spent in providing themselves with every sort of weapon they could make or procure: guns, swords, blacksmiths' hammers, carpenters' axes, iron crows, pikes, halberts, pitch-

forks, spits, clubs, etc., etc. The incredible numbers in which they assembled the next morning, and the still more incredible resolution they exhibited, embarrassed and astonished their enemies. Little did the new ministry expect such a salute. Accustomed to slavery themselves, they had no idea that Liberty was capable of such inspiration, or that a body of unarmed citizens would dare to face the military force of thirty thousand men. Every moment of this day was employed in collecting arms, concerting plans, and arranging themselves into the best order which such an instantaneous movement could afford. Broglio continued lying round the city, but made no farther advances this day, and the succeeding night passed with as much tranquillity as such a scene could possibly admit.

But defence only was not the object of the citizens. They had a cause at stake, on which depended their freedom or their slavery. They every moment expected an attack, or to hear of one made on the National Assembly; and in such a situation, the most prompt measures are sometimes the best. The object that now presented itself was the Bastille; and the *éclat* of carrying such a fortress in the face of such an army, could not fail to strike a terror into the new ministry, who had scarcely yet had time to meet. By some intercepted correspondence, it was discovered that the Mayor of Paris, M. Defflesselles, who appeared to be in the interest of the citizens, was betraying them; from this discovery, there remained no doubt that Broglio would reinforce the Bastille the ensuing evening. It was therefore necessary to attack it that day; but before this could be done, it was first necessary to procure a better supply of arms than they were then possessed of.

There was, adjoining to the city, a large magazine of arms deposited at the Hospital of the Invalids, which the citizens summoned to surrender; and as the place was not defensible, nor attempted much defence, they soon succeeded. Thus supplied, they marched to attack the Bastille; a vast mixed multitude of all ages, and of all degrees, armed with all sorts of weapons. Imagination would fail in describing to itself the appearance of such a procession, and of the anxiety for the events which a few hours or a few minutes might produce. What plans the ministry was forming, were as unknown to the people within the city, as what the citizens were doing was unknown to the ministry; and what movements Broglio might make for the support or relief of the place, were to the citizens equally as unknown. All was mystery and hazard.

That the Bastille was attacked with an enthusiasm of heroism, such only as the highest animation of Liberty could inspire, and carried in the space of a few hours, is an event which the world is fully possessed of. I am not undertaking a detail of the attack, but bringing into view the conspiracy against the nation which provoked it, and

which fell with the Bastille. The prison to which the new ministry were dooming the National Assembly, in addition to its being the high altar and castle of despotism, became the proper object to begin with. This enterprise broke up the new ministry, who began now to fly from the ruin they had prepared for others. The troops of Broglio dispersed, and himself fled also.

Mr. Burke has spoken a great deal about plots, but he has never once spoken of this plot against the National Assembly, and the liberties of the Nation; and that he might not, he has passed over all the circumstances that might throw it in his way. The exiles who have fled from France, whose case he so much interests himself in, and from whom he has had his lesson, fled in consequence of the miscarriage of this plot. No plot was formed against them; they were plotting against others; and those who fell, met, not unjustly, the punishment they were preparing to execute. But will Mr. Burke say, that if this plot, contrived with the subtilty of an ambuscade, had succeeded, the successful party would have restrained their wrath so soon? Let the history of all old Governments answer the question.

Whom has the National Assembly brought to the scaffold? None. They were themselves the devoted victims of this plot, and they have not retaliated; why, then, are they charged with revenge they have not acted? In the tremendous breaking forth of a whole people, in which all degrees, tempers, and characters are confounded, delivering themselves by a miracle of exertion from the destruction meditated against them, is it to be expected that nothing will happen? When men are sore with the sense of oppressions, and menaced with the prospect of new ones, is the calmness of philosophy or the palsy of insensibility to be looked for? Mr. Burke exclaims against outrage; yet the greatest is that which himself has committed. His book is a volume of outrage, not apologised for by the impulse of a moment, but cherished through a space of ten months; yet Mr. Burke had no provocation, no life, no interest at stake.

More of the citizens fell in this struggle than of their opponents; but four or five persons were seized by the populace and instantly put to death; the Governor of the Bastille, and the Mayor of Paris, who was detected in the act of betraying them; and afterwards Foulon, one of the new ministry, and Berthier, his son-in-law, who had accepted the office of intendant of Paris. Their heads were stuck upon spikes, and carried about the city; and it is upon this mode of punishment that Mr. Burke builds a great part of his tragic scenes. Let us therefore examine how men came by the idea of punishing in this manner.

They learn it from the Governments they live under, and retaliate the punishments they have been accustomed to behold. The heads

stuck upon spikes, which remained for years upon Temple Bar, differed nothing in the horror of the scene from those carried about upon spikes at Paris; yet this was done by the English Government. It may perhaps be said that it signifies nothing to a man what is done to him after he is dead; but it signifies much to the living; it either tortures their feelings or hardens their hearts, and in either case it instructs them how to punish when power falls into their hands.

Lay then the axe to the root, and teach Governments humanity. It is their sanguinary punishments which corrupt mankind. In England the punishment in certain cases is by hanging, drawing and quartering; the heart of the sufferer is cut out and held up to the view of the populace. In France, under the former Government, the punishments were not less barbarous. Who does not remember the execution of Damien, torn to pieces by horses? The effect of those cruel spectacles exhibited to the populace is to destroy tenderness or excite revenge; and by the base and false idea of governing men by terror, instead of reason, they become precedents. It is over the lowest class of mankind that Government by terror is intended to operate, and it is on them that it operates to the worst effect. They have sense enough to feel they are the objects aimed at; and they inflict in their turn the examples of terror they have been instructed to practise.

There is in all European countries a large class of people of that description, which in England is called the Mob. Of this class were those who committed the burnings and devastations in London in 1780, and of this class were those who carried the heads upon spikes in Paris. Foulon and Berthier were taken up in the country, and sent to Paris, to undergo their examination at the Hotel de Ville; for the National Assembly, immediately on the new ministry coming into office, passed a decree, which they communicated to the King and Cabinet, that they (the National Assembly) would hold the ministry, of which Foulon was one, responsible for the measures they were advising and pursuing; but the mob, incensed at the appearance of Foulon and Berthier, tore them from their conductors before they were carried to the Hotel de Ville, and executed them on the spot. Why then does Mr. Burke charge outrages of this kind on a whole people? As well may he charge the riots and outrages of 1780 on all the people of London, or those in Ireland on all his countrymen.

But everything we see or hear offensive to our feelings and derogatory to the human character should lead to other reflections than those of reproach. Even the beings who commit them have some claim to our consideration. How then is it that such vast classes of mankind as are distinguished by the appellation of the vulgar, or the ignorant mob, are so numerous in all old countries? The instant we ask ourselves this question, reflection feels an answer. They arise, as an un-

avoidable consequence, out of the ill construction of all old Governments in Europe, England included with the rest, It is by distortedly exalting some men, that others are distortedly debased, till the whole is out of nature. A vast mass of mankind are degradedly thrown into the background of the human picture, to bring forward, with greater glare the puppet-show of State and Aristocracy. In the commencement of a Revolution, those men are rather the followers of the camp than of the standard of Liberty, and have yet to be instructed how to reverence it.

I give to Mr. Burke all his theatrical exaggerations for facts, and I then ask him if they do not establish the certainty of what I here lay down? Admitting them to be true, they show the necessity of the French Revolution, as much as any one thing he could have asserted. These outrages were not the effect of the principles of the Revolution, but of the degraded mind that existed before the Revolution, and which the Revolution is calculated to reform. Place them then to their proper cause, and take the reproach of them to your own side.

It is the honour of the National Assembly and the city of Paris that, during such a tremendous scene of arms and confusion, beyond the controul of all authority, they have been able, by the influence of example and exhortation, to restrain so much. Never were more pains taken to instruct and enlighten mankind, and to make them see that their interest consisted in their virtue, and not in their revenge, than have been displayed in the Revolution of France. I now proceed to make some remarks on Mr. Burke's account of the expedition to Versailles, October the 5th and 6th.

I cannot consider Mr. Burke's book in any other light than dramatic performance; and he must, I think, have considered it in the same light himself, by the poetical liberties he has taken of omitting some facts, distorting others, and making the whole machinery bend to produce a stage effect. Of this kind is his account of the expedition to Versailles. He begins this account by omitting the only facts which as causes are known to be true; everything beyond these is conjecture even in Paris; and he then works up a tale accommodated to his own passions and prejudices.

It is to be observed throughout Mr. Burke's book that he never speaks of plots against the Revolution; and it is from those plots that all the mischiefs have arisen. It suits his purpose to exhibit the consequences without their causes. It is one of the arts of the drama to do so. If the crimes of men were exhibited with their sufferings, the stage effect would sometimes be lost, and the audience would be inclined to approve where it was intended they should commiserate.

After all the investigations that have been made into this intricate affair (the expedition to Versailles), it still remains enveloped in all

that kind of mystery which ever accompanies events produced more from a concurrence of awkward circumstances than from fixed design. While the characters of men are forming, as is always the case in Revolutions, there is a reciprocal suspicion, and a disposition to misinterpret each other; and even parties directly opposite in principle will sometimes concur in pushing forward the same movement with very different views, and with the hopes of its producing very different consequences. A great deal of this may be discovered in this embarrassed affair, and yet the issue of the whole was what nobody had in view.

The only things certainly known are that considerable uneasiness was at this time excited at Paris by the delay of the King in not sanctioning and forwarding the decrees of the National Assembly, particularly that of the Declaration of the Rights of Man, and the decrees of the fourth of August, which contained the foundation principles on which the constitution was to be erected. The kindest, and perhaps the fairest conjecture upon this matter is, that some of the ministers intended to make remarks and observations upon certain parts of them before they were finally sanctioned and sent to the provinces; but be this as it may, the enemies of the Revolution derived hope from the delay, and the friends of the Revolution uneasiness.

During this state of suspense, the *Garde du Corps*, which was composed, as such regiments generally are, of persons much connected with the Court, gave an entertainment at Versailles (October 1) to some foreign regiments then arrived; and when the entertainment was at the height, on a signal given the *Garde du Corps* tore the national cockade from their hats, trampled it under foot, and replaced it with a counter-cockade prepared for the purpose. An indignity of this kind amounted to defiance. It was like declaring war; and if men will give challenges they must expect consequences. But all this Mr. Burke has carefully kept out of sight. He begins his account by saying: "History will record that on the morning of the 6th of October, 1789, the King and Queen of France, after a day of confusion, alarm, dismay, and slaughter, lay down under the pledged security of public faith to indulge nature in a few hours of respite, and troubled melancholy repose." This is neither the sober stile of history, nor the intention of it. It leaves everything to be guessed at and mistaken. One would at least think there had been a battle; and a battle there probably would have been had it not been for the moderating prudence of those whom Mr. Burke involves in his censures. By his keeping the *Garde du Corps* out of sight Mr. Burke has afforded himself the dramatic licence of putting the King and Queen in their places, as if the object of the expedition was against them. But to return to my account—

This conduct of the *Garde du Corps*, as might well be expected, alarmed and enraged the Parisians. The colours of the cause, and the cause itself, were become too united to mistake the intention of the insult, and the Parisians were determined to call the *Garde du Corps* to an account. There was certainly nothing of the cowardice of assassination in marching in the face of day to demand satisfaction, if such a phrase may be used, of a body of armed men who had voluntarily given defiance. But the circumstance which serves to throw this affair into embarrassment is, that the enemies of the Revolution appear to have encouraged it as well as its friends. The one hoped to prevent a civil war by checking it in time, and the other to make one. The hopes of those opposed to the Revolution rested in making the King of their party, and getting him from Versailles to Metz, where they expected to collect a force and set up a standard. We have, therefore, two different objects presenting themselves at the same time, and to be accomplished by the same means; the one to chastise the *Garde du Corps*, which was the object of the Parisians; the other to render the confusion of such a scene an inducement to the King to set off for Metz.

On the 5th of October a very numerous body of women, and men in the disguise of women, collected round the Hotel de Ville or town-hall at Paris, and set off for Versailles. Their professed object was the *Garde du Corps*; but prudent men readily recollect that mischief is more easily begun than ended; and this impressed itself with the more force from the suspicions already stated, and the irregularity of such a cavalcade. As soon, therefore, as a sufficient force could be collected, M. de la Fayette, by orders from the civil authority of Paris, set off after them at the head of twenty thousand of the Paris militia. The Revolution could derive no benefit from confusion, and its opposers might. By an amiable and spirited manner of address he had hitherto been fortunate in calming disquietudes, and in this he was extraordinarily successful; to frustrate, therefore, the hopes of those who might seek to improve this scene into a sort of justifiable necessity for the King's quitting Versailles and withdrawing to Metz, and to prevent at the same time the consequences that might ensue between the *Garde du Corps* and this phalanx of men and women, he forwarded expresses to the King, that he was on his march to Versailles, by the orders of the civil authority of Paris, for the purpose of peace and protection, expressing at the same time the necessity of restraining the *Garde du Corps* from firing upon the people.

He arrived at Versailles between ten and eleven at night. The *Garde du Corps* was drawn up, and the people had arrived some time before, but everything had remained suspended. Wisdom and policy now consisted in changing a scene of danger into a happy event. M. de

la Fayette became the mediator between the enraged parties; and the King, to remove the uneasiness which had arisen from the delay already stated, sent for the President of the National Assembly, and signed the Declaration of the Rights of Man, and such other parts of the Constitution as were in readiness.

It was now about one in the morning. Everything appeared to be composed, and a general congratulation took place. By the beat of drum a proclamation was made that the citizens of Versailles would give the hospitality of their houses to their fellow-citizens of Paris. Those who could not be accommodated in this manner remained in the streets, or took up their quarters in the churches; and at two o'clock the King and Queen retired.

In this state matters passed till the break of day, when a fresh disturbance arose from the censurable conduct of some of both parties, for such characters there will be in all such scenes. One of the *Garde du Corps* appeared at one of the windows of the palace, and the people who had remained during the night in the streets accosted him with reviling and provocative language. Instead of retiring, as in such a case prudence would have dictated, he presented his musket, fired, and killed one of the Paris militia. The peace being thus broken, the people rushed into the palace in quest of the offender. They attacked the quarters of the *Garde du Corps* within the palace, and pursued them throughout the avenues of it, and to the apartments of the King. On this tumult, not the Queen only, as Mr. Burke has represented it, but every person in the palace was awakened and alarmed; and M. de la Fayette had a second time to interpose between the parties, the event of which was that the *Garde du Corps* put on the national cockade, and the matter ended as by oblivion, after the loss of two or three lives.

During the latter part of the time in which this confusion was acting, the King and Queen were in public at the balcony, and neither of them concealed for safety's sake, as Mr. Burke insinuates. Matters being thus appeased, and tranquillity restored, a general acclamation broke forth of *Le Roi à Paris—Le Roi à Paris—The King to Paris*. It was the shout of peace, and immediately accepted on the part of the King. By this measure all future projects of trepanning the King to Metz, and setting up the standard of opposition to the Constitution, were prevented, and the suspicions extinguished. The King and his family reached Paris in the evening, and were congratulated on their arrival by M. Bailley, the Mayor of Paris, in the name of the citizens. Mr. Burke, who throughout his book confounds things, persons, and principles, as in his remarks on M. Bailley's address, confounded time also. He censures M. Bailley for calling it "*un bon jour*," a good day. Mr. Burke should have informed himself that this scene took up the space of two days, the day on which

it began with every appearance of danger and mischief, and the day on which it terminated without the mischiefs that threatened; and that it is to this peaceful termination that M. Bailley alludes, and to the arrival of the King at Paris. Not less than three hundred thousand persons arranged themselves in the procession from Versailles to Paris, and not an act of molestation was committed during the whole march.

Mr. Burke, on the authority of M. Lally Tollendal, a deserter from the National Assembly, says, that on entering Paris, the people shouted "*Tous les évêques à la lanterne.*" All Bishops to be hanged at the lanthorn or lamp-posts. It is surprising that nobody could hear this but Lally Tollendal, and that nobody should believe it but Mr. Burke. It has not the least connection with any part of the transaction, and is totally foreign to every circumstance of it. The Bishops had never been introduced before into any scene of Mr. Burke's drama: why then are they, all at once, and altogether, *tout à coup, et tous ensemble*, introduced now? Mr. Burke brings forward his bishops and his lanthorn-like figures in a magic lanthorn, and raises his scenes by contrast instead of connection. But it serves to show, with the rest of his book, what little credit ought to be given where even probability is set at defiance, for the purpose of defaming; and with this reflection, instead of a soliloquy in praise of chivalry, as Mr. Burke has done, I close the account of the expedition to Versailles.

I have now to follow Mr. Burke through a pathless wilderness of rhapsodies, and a sort of descant upon Governments, in which he asserts whatever he pleases, on the presumption of its being believed, without offering either evidence or reasons for so doing.

Before anything can be reasoned upon to a conclusion, certain facts, principles, or data, to reason from, must be established, admitted, or denied. Mr. Burke, with his usual outrage, abuses the Declaration of the Rights of Man, published by the National Assembly of France as the basis on which the constitution of France is built. This he calls "paltry and blurred sheets of paper about the rights of man." Does Mr. Burke mean to deny that man has any rights? If he does, then he must mean that there are no such things as rights anywhere, and that he has none himself; for who is there in the world but man? But if Mr. Burke means to admit that man has rights, the question then will be: What are those rights, and how came man by them originally?

The error of those who reason by precedents drawn from antiquity, respecting the rights of man, is that they do not go far enough into antiquity. They do not go the whole way. They stop in some of the intermediate stages of an hundred or a thousand years, and produce what was then done, as a rule for the present day. This is not authority at all. If we travel still farther into antiquity, we shall

find a direct contrary opinion and practice prevailing; and if antiquity is to be authority, a thousand such authorities may be produced, successively contradicting each other; but if we proceed on, we shall at last come out right; we shall come to the time when man came from the hand of his Maker. What was he then? Man. Man was his high and only title, and a higher cannot be given him. But of titles I shall speak hereafter.

We are now got at the origin of man, and at the origin of his rights. As to the manner in which the world has been governed from that day to this, it is no farther any concern of ours than to make a proper use of the errors or the improvements which the history of it presents. Those who lived a hundred or a thousand years ago, were then moderns, as we are now. They had their ancients, and those ancients had others, and we also shall be ancients in our turn. If the mere name of antiquity is to govern the affairs of life, the people who are to live an hundred or a thousand years hence, may as well take us for a precedent, as we make a precedent of those who lived an hundred or a thousand years ago. The fact is, that portions of antiquity, by proving everything, establish nothing. It is authority against authority all the way, till we come to the divine origin of the rights of man at the creation. Here our inquiries find a resting-place, and our reason finds a home. If a dispute about the rights of man had arisen at the distance of a hundred years from the creation, it is to this source of authority they must have referred, and it is to this same source of authority that we must now refer.

Though I mean not to touch upon any sectarian principle of religion, yet it may be worth observing, that the genealogy of Christ is traced to Adam. Why then not trace the rights of man to the creation of man? I will answer the question. Because there have been upstart Governments, thrusting themselves between and presumptuously working to un-make man.

If any generation of men ever possessed the rights of dictating the mode by which the world should be governed for ever, it was the first generation that existed; and if that generation did it not, no succeeding generation can show any authority for doing it, nor can set any up. The illuminating and divine principle of the equal rights of man (for it has its origin from the Maker of man) relates, not only to the living individuals, but to generations of men succeeding each other. Every generation is equal in rights to the generations which preceded it, by the same rule that every individual is born equal in rights with his contemporary.

Every history of the creation, and every traditionary account, whether from the lettered or unlettered world, however they may vary in their opinion or belief of certain particulars, all agree in establishing one point, the unity of man; by which I mean that men are

all of one degree, and consequently that all men are born equal, and with equal natural rights, in the same manner as if posterity had been continued by creation instead of generation, the latter being only the mode by which the former is carried forward; and consequently every child born into the world must be considered as deriving its existence from God. The world is as new to him as it was to the first man that existed, and his natural right in it is of the same kind.

The Mosaic account of the creation, whether taken as divine authority or merely historical, is fully up to this point, the unity or equality of man. The expressions admit of no controversy. "And God said, Let us make man in our own image. In the image of God created he him; male and female created he them." The distinction of sexes is pointed out, but no other distinction is even implied. If this be not divine authority, it is at least historical authority, and shows that the equality of man, so far from being a modern doctrine, is the oldest upon record.

It is also to be observed that all the religions known in the world are founded, so far as they relate to man, on the unity of man, as being all of one degree. Whether in heaven or in hell, or in whatever state man may be supposed to exist hereafter, the good and the bad are the only distinctions. Nay, even the laws of Governments are obliged to slide into this principle, by making degrees to consist in crimes and not in persons.

It is one of the greatest of all truths, and of the highest advantage to cultivate. By considering man in this light, and by instructing him to consider himself in this light, it places him in a close connection with all his duties, whether to his Creator or to the creation, of which he is a part; and it is only when he forgets his origin, or, to use a more fashionable phrase, his birth and family, that he becomes dissolute. It is not among the least of the evils of the present existing Governments in all parts of Europe that man, considered as man, is thrown back to a vast distance from his Maker, and the artificial chasm filled up by a succession of barriers, or sort of turnpike gates, through which he has to pass. I will quote Mr. Burke's catalogue of barriers that he has set up between Man and his Maker. Putting himself in the character of a herald, he says: We fear God—we look with awe to kings—with affection to Parliaments—with duty to magistrates—with reverence to priests, and with respect to nobility. Mr. Burke has forgotten to put in "chivalry." He has also forgotten to put in Peter.

The duty of man is not a wilderness of turnpike gates, through which he is to pass by tickets from one to the other. It is plain and simple, and consists but of two points. His duty to God, which every man must feel; and with respect to his neighbour, to do as he would

be done by. If those to whom power is delegated do well, they will be respected; if not, they will be despised; and with regard to those to whom no power is delegated, but who assume it, the rational world can know nothing of them.

Hitherto we have spoken only (and that but in part) of the natural rights of man. We have now to consider the civil rights of man, and to show how the one originates from the other. Man did not enter into society to become worse than he was before, not to have fewer rights than he had before, but to have those rights better secured. His natural rights are the foundation of all his civil rights. But in order to pursue this distinction with more precision, it will be necessary to mark the different qualities of natural and civil rights.

A few words will explain this. Natural rights are those which appertain to man in right of his existence. Of this kind are all the intellectual rights, or rights, of the mind, and also all those rights of acting as an individual for his own comfort and happiness, which are not injurious to the natural rights of others. Civil rights are those which appertain to man in right of his being a member of society. Every civil right has for its foundation some natural right pre-existing in the individual, but to the enjoyment of which his individual power is not, in all cases, sufficiently competent. Of this kind are all those which relate to security and protection.

From this short view it will be easy to distinguish between that class of natural rights which man retains after entering into society and those which he throws into the common stock as a member of society.

The natural rights which he retains are all those in which the power to execute it is as perfect in the individual as the right itself. Among this class, as is before mentioned, are all the intellectual rights, or rights of the mind; consequently religion is one of those rights. The natural rights which are not retained, are all those in which, though the right is perfect in the individual, the power to execute them is defective. They answer not his purpose. A man, by natural right, has a right to judge in his own cause; and so far as the right of the mind is concerned, he never surrenders it. But what availeth it him to judge, if he has not power to redress? He therefore deposits this right in the common stock of society, and takes the arm of society, of which he is a part, in preference and in addition to his own. Society grants him nothing. Every man is a proprietor in society, and draws on the capital as a matter of right.

From these premises two or three certain conclusions will follow:

First, That every civil right grows out of a natural right; or, in other words, is a natural right exchanged.

Secondly, That civil power properly considered as such is made up of the aggregate of that class of the natural rights of man, which be-

comes defective in the individual in point of power, and answers not his purpose, but when collected to a focus becomes competent to the purpose of every one.

Thirdly, That the power produced from the aggregate of natural rights, imperfect in power in the individual, cannot be applied to invade the natural rights which are retained in the individual, and in which the power to execute is as perfect as the right itself.

We have now, in a few words, traced man from a natural individual to a member of society, and shown, or endeavoured to show, the quality of the natural rights retained, and of those which are exchanged for civil rights. Let us now apply these principles to Governments.

In casting our eyes over the world, it is extremely easy to distinguish the Governments which have arisen out of society, or out of the social compact, from those which have not; but to place this in a clearer light than what a single glance may afford, it will be proper to take a review of the several sources from which Governments have arisen and on which they have been founded.

They may be all comprehended under three heads.

First, Superstition.

Secondly, Power.

Thirdly, The common interest of society and the common rights of man.

The first was a Government of Priestcraft, the second of Conquerors, and the third of Reason.

When a set of artful men pretended, through the medium of oracles, to hold intercourse with the Deity, as familiarly as they now march up the back-stairs in European Courts, the world was completely under the government of superstition. The oracles were consulted, and whatever they were made to say became the law; and this sort of Government lasted as long as this sort of superstition lasted.

After these a race of conquerors arose, whose Government, like that of William the Conqueror, was founded in power, and the sword assumed the name of a sceptre. Governments thus established last as long as the power to support them lasts; but that they might avail themselves of every engine in their favour, they united fraud to force, and set up an idol which they called Divine Right, and which, in imitation of the Pope, who affects to be spiritual and temporal, and in contradiction to the Founder of the Christian religion, twisted itself afterwards into an idol of another shape, called Church and State. The key of St. Peter and the key of the Treasury became quartered on one another, and the wondering cheated multitude worshipped the invention.

When I contemplate the natural dignity of man, when I feel (for Nature has not been kind enough to me to blunt my feelings) for the

honour and happiness of its character, I become irritated at the attempt to govern mankind by force and fraud, as if they were all knaves and fools, and can scarcely avoid disgust at those who are thus imposed upon.

We have now to review the governments which arise out of society, in contradistinction to those which arose out of superstition and conquest.

It has been thought a considerable advance towards establishing the principles of Freedom to say that Government is a compact between those who govern and those who are governed; but this cannot be true, because it is putting the effect before the cause; for as man must have existed before Governments existed, there necessarily was a time when Governments did not exist, and consequently there could originally exist no governors to form such a compact with. The fact therefore must be that the individuals themselves, each in his own personal and sovereign right, entered into a compact with each other to produce a Government: and this is the only mode in which Governments have a right to arise, and the only principle on which they have a right to exist.

To possess ourselves of a clear idea of what Government is, or ought to be, we must trace it to its origin. In doing this we shall easily discover that Governments must have arisen either out of the people or over the people. Mr. Burke has made no distinction. He investigates nothing to its source, and therefore he confounds everything; but he has signified his intention of undertaking, at some future opportunity, a comparison between the Constitutions of England and France. As he thus renders it a subject of controversy by throwing the gauntlet, I take him up on his own ground. It is in high challenges that high truths have the rights of appearing; and I accept it with the more readiness because it affords me, at the same time, an opportunity of pursuing the subject with respect to Governments arising out of society.

But it will be first necessary to define what is meant by a Constitution. It is not sufficient that we adopt the word; we must fix also a standard signification to it.

A Constitution is not a thing in name only, but in fact. It has not an ideal, but a real existence; and wherever it cannot be produced in a visible form, there is none. A Constitution is a thing antecedent to a Government, and a Government is only the creature of a Constitution. The Constitution of a country is not the act of its Government, but of the people constituting a Government. It is the body of elements, to which you can refer, and quote article by article; and which contains the principles on which the Government shall be established, the manner in which it shall be organised, the powers it shall have, the mode of elections, the duration of Parliaments, or

by what other name such bodies may be called; the powers which the executive part of the Government shall have; and in fine, everything that relates to the complete organisation of a civil Government, and the principles on which it shall act, and by which it shall be bound. A Constitution, therefore, is to a Government what the laws made afterwards by that Government are to a Court of Judicature. The Court of Judicature does not make the laws, neither can it alter them; it only acts in conformity to the laws made: and the Government is in like manner governed by the Constitution.

Can, then, Mr. Burke produce the English Constitution? If he cannot, we may fairly conclude that though it has been so much talked about, no such thing as a Constitution exists, or ever did exist, and consequently that the people have yet a Constitution to form.

Mr. Burke will not, I presume, deny the position I have already advanced—namely, that Governments arise either out of the people or over the people. The English Government is one of those which arose out of a conquest, and not out of society, and consequently it arose over the people; and though it has been much modified from the opportunity of circumstances since the time of William the Conqueror, the country has never yet regenerated itself, and is therefore without a Constitution.

I readily perceive the reason why Mr. Burke declined going into the comparison between the English and French Constitutions, because he could not but perceive, when he sat down to the task, that no such thing as a Constitution existed on his side the question. His book is certainly bulky enough to have contained all he could say on this subject, and it would have been the best manner in which people could have judged of their separate merits. Why then has he declined the only thing that was worth while to write upon? It was the strongest ground he could take, if the advantages were on his side, but the weakest if they were not; and his declining to take it is either a sign that he could not possess it or could not maintain it.

Mr. Burke said, in a speech last winter in Parliament, that when the National Assembly first met in three Orders (the Tiers Etats, the Clergy, and the Noblesse), France had then a good constitution. This shows among numerous other instances, that Mr. Burke does not understand what a constitution is. The persons so met were not a Constitution, but a Convention, to make a Constitution.

The present National Assembly of France is, strictly speaking, the personal social compact. The members of it are the delegates of the Nation in its original character; future assemblies will be the delegates of the Nation in its organized character. The authority of the present assembly is different to what the authority of future assemblies will be. The authority of the present one is to form a Constitution; the authority of future assemblies will be to legis-

iate according to the principles and forms prescribed in that Constitution; and if experience should hereafter show that alterations, amendments, or additions are necessary, the Constitution will point out the mode by which such things shall be done, and not leave it to the discretionary power of the future Government.

A Government on the principles on which constitutional Governments arising out of society are established, cannot have the right of altering itself. If it had, it would be arbitrary. It might make itself what it pleased; and wherever such a right is set up, it shows there is no Constitution. The act by which the English Parliament empowered itself to sit seven years, shows there is no Constitution in England. It might, by the same self-authority, have sat any greater number of years, or for life. The bill which the present Mr. Pitt brought into Parliament some years ago, to reform Parliament, was on the same erroneous principle. The right of reform is in the nation in its original character, and the constitutional method would be by a general convention elected for the purpose. There is, moreover, a paradox in the idea of vitiated bodies reforming themselves.

From these preliminaries I proceed to draw some comparisons. I have already spoken of the declaration of rights; and as I mean to be as concise as possible, I shall proceed to other parts of the French Constitution.

The Constitution of France says, That every man who pays a tax of sixty sous per annum (2s. 6d. English) is an elector. What article will Mr. Burke place against this? Can anything be more limited, and at the same time more capricious, than the qualifications of electors are in England? Limited—because not one man in an hundred (I speak much within compass) is admitted to vote. Capricious because the lowest character that can be supposed to exist, and who has not so much as the visible means of an honest livelihood, is an elector in some places: while in other places, the man who pays very large taxes, and has a known fair character, and the farmer who rents to the amount of three or four hundred pounds a year, with a property on that farm to three or four times that amount, is not admitted to be an elector.

Everything is out of nature, as Mr. Burke says on another occasion, in this strange chaos, and all sorts of follies are blended with all sorts of crimes.

William the Conqueror and his descendants parcelled out the country in this manner, and bribed some parts of it by what they called charters to hold the other parts of it the better subjected to their will. This is the reason why so many of those charters abound in Cornwall; the people were averse to the Government established at the conquest, and the towns were garrisoned and bribed to enslave the country. All the old charters are the badges of this conquest,

and it is from this source that the capriciousness of elections arises.

The French Constitution says, that the number of representatives for any place shall be in a ratio to the number of taxable inhabitants or electors.

What article will Mr. Burke place against this? The county of Yorkshire, which contains nearly a million of souls, sends two county members; and so does the county of Rutland, which contains not an hundredth part of that number. The town of Old Sarum, which contains not three houses, sends two members; and the town of Manchester, which contains upwards of sixty thousand souls, is not admitted to send any. Is there any principle in these things? Is there anything by which you can trace the marks of freedom, or discover those of wisdom? No wonder then Mr. Burke has declined the comparison, and endeavoured to lead his readers from the point by a wild, unsystematical, display of paradoxical rhapsodies.

The French Constitution says, that the National Assembly shall be elected every two years.

What article will Mr. Burke place against this? Why, that the Nation has no right at all in the case; that the Government is perfectly arbitrary with respect to this point; and he can quote for his authority the precedent of a former Parliament.

The French Constitution says, there shall be no game laws, that the farmer on whose lands wild game shall be found (for it is by the produce of his lands they are fed) shall have a right to what he can take; that there shall be no monopolies of any kind—that all trade shall be free and every man free to follow any occupation by which he can procure an honest livelihood, and in any place, town, or city throughout the Nation.

What will Mr. Burke say to this? In England, game is made the property of those at whose expense it is not fed; and with respect to monopolies, the country is cut up into monopolies. Every chartered town is an aristocratical monopoly in itself, and the qualification of electors proceeds out of those chartered monopolies. Is this freedom? Is this what Mr. Burke means by a Constitution?

In these chartered monopolies, a man coming from another part of the country is hunted from them as if he were a foreign enemy. An Englishman is not free of his own country; every one of those places presents a barrier in his way, and tells him he is not a freeman—that he has no rights. Within these monopolies are other monopolies. In a city, such for instance as Bath, which contains between twenty and thirty thousand inhabitants, the right of electing representatives to Parliament is monopolized by about thirty-one persons. And within these monopolies are still others. A man even of the same town, whose parents were not in circumstances to give him an oc-

cupation, is debarred, in many cases, from the natural right of acquiring one, be his genius or industry what it may.

Are these things examples to hold out to a country regenerating itself from slavery, like France? Certainly they are not, and certain am I, that when the people of England come to reflect upon them they will, like France, annihilate those badges of ancient oppression, those traces of a conquered nation. Had Mr. Burke possessed talents similar to the author of "On the Wealth of Nations," he would have comprehended all the parts which enter into, and, by assemblage, form a constitution. He would have reasoned from minutiae to magnitude. It is not from his prejudices only, but from the disorderly cast of his genius, that he is unfitted for the subject he writes upon. Even his genius is without a Constitution. It is a genius at random, and not a genius constituted. But he must say something. He has therefore mounted in the air like a balloon, to draw the eyes of the multitude from the ground they stand upon.

Much is to be learned from the French Constitution. Conquest and tyranny transplanted themselves with William the Conqueror from Normandy into England, and the country is yet disfigured with the marks. May, then, the example of all France contribute to regenerate the freedom which a province of it destroyed!

The French Constitution says that to preserve the national representation from being corrupt no member of the National Assembly shall be an officer of the Government, a placeman or a pensioner.

What will Mr. Burke place against this? I will whisper his answer—Loaves and Fishes. Ah! this Government of loaves and fishes has more mischief in it than people have yet reflected on. The National Assembly has made the discovery, and it holds out the example to the world. Had Governments agreed to quarrel on purpose to fleece their countries by taxes, they could not have succeeded better than they have done.

Many things in the English Government appear to me the reverse of what they ought to be and what they are said to be. The Parliament, imperfectly and capriciously elected as it is, is nevertheless supposed to hold the national purse in trust for the nation; but in the manner in which an English Parliament is constructed it is like a man being both mortgager and mortgagee, and in the case of misapplication of trust it is the criminal sitting in judgment upon himself. If those who vote the supplies are the same persons who receive the supplies when voted, and are to account for the expediture of those supplies to those who voted them, it is themselves accountable to themselves, and the Comedy of Errors concludes with the Pantomime of Hush. Neither the ministerial party nor the Opposition will touch upon this case. The national purse is the common hack which each mounts upon. It is like what the coun-

try people call "Ride and tie—You ride a little way, and then I." They order these things better in France.

The French Constitution says that the right of war and peace is in the nation.

Where else should it reside but in those who are to pay the expense?

In England this right is said to reside in a metaphor shown at the Tower for sixpence or a shilling a piece: so are the lions and it would be a step nearer to reason to say it resided in them, for any inanimate metaphor is no more than a hat or a cap. We can all see the absurdity of worshipping Aaron's molten calf, or Nebuchadnezzar's golden image; but why do men continue to practise themselves the absurdities they despise in others?

It may with reason be said that in the manner the English Nation is represented it signifies not where this right resides, whether in the Crown or in the Parliament. War is the common harvest of all those who participate in the division and expenditure of public money, in all countries. It is the art of conquering at home; the object of it is an increase of revenue; and as revenue cannot be increased without taxes, a pretence must be made for expenditures. In reviewing the history of the English Government, its wars and its taxes, a bystander, not blinded by prejudice nor warped by interest, would declare that taxes were not raised to carry on wars, but that wars were raised to carry on taxes.

Mr. Burke, as a member of the House of Commons, is a part of the English Government; and though he professes himself an enemy to war, he abuses the French Constitution, which seeks to explode it. He holds up the English Government as a model, in all its parts, to France; but he should first know the remarks which the French make upon it. They contend in favor of their own, that the portion of liberty enjoyed in England is just enough to enslave a country by more productively than by despotism, and that as the real object of all despotism is revenue, a Government so formed obtains more than it could do either by direct despotism, or in a full state of freedom, and is, therefore, on the ground of interest opposed to both. They account also for the readiness which always appears in such Governments for engaging in wars by remarking on the different motives which produce them. In despotic Governments wars are the effect of pride; but in those Governments in which they become the means of taxation, they acquire thereby a more permanent promptitude.

The French Constitution, therefore, to provide against both these evils, has taken away the power of declaring war from kings and ministers, and placed the right where the expense must fall.

When the question of the right of war and peace was agitating in the National Assembly, the people of England appeared to be much

interested in the event, and highly to applaud the decision. As a principle it applies as much to one country as another. William the Conqueror, as a conqueror, held this power of war and peace in himself, and his descendants have ever since claimed it under him as a right.

Although Mr. Burke has asserted the right of the Parliament at the Revolution to bind and control the Nation and posterity for ever, he denies at the same time that the Parliament or the nation had any right to alter what he calls the succession of the Crown in anything but in part, or by a sort of modification. By his taking this ground he throws the case back to the Norman Conquest, and by thus running a line of succession springing from William the Conqueror to the present day, he makes it necessary to inquire who and what William the Conqueror was, and where he came from, and into the origin, history and nature of what are called prerogatives. Everything must have had a beginning, and the fog of time and antiquity should be penetrated to discover it. Let, then, Mr. Burke bring forward his William of Normandy, for it is to this origin that his argument goes. It also unfortunately happens, in running this line of succession, that another line parallel thereto presents itself, which is, that if the succession runs in the line of the conquest, the Nation runs in the line of being conquered, and it ought to rescue itself from this reproach.

But it will perhaps be said that tho' the power of declaring war descends in the heritage of the conquest, it is held in check by the right of the Parliament to withhold the supplies. It will always happen when a thing is originally wrong that amendments do not make it right, and it often happens that they do as much mischief one way as good the other, and such is the case here, for if the one rashly declares war as a matter of right, and the other peremptorily withholds the supplies as a matter of right, the remedy becomes as bad, or worse, than the disease. The one forces the Nation to a combat, and the other ties its hands; but the more probable issue is that the contest will end in a collusion between the parties, and be made a screen to both.

On this question of war, three things are to be considered. First, the right of declaring it; secondly, the expence of supporting it; thirdly, the mode of conducting it after it is declared. The French Constitution places the right where the expence must fall, and this union can be only in the Nation. The mode of conducting it after it is declared, it consigns to the executive department. Were this the case in all countries, we should hear but little more of wars.

Before I proceed to consider other parts of the French Constitution, and by way of relieving the fatigue of argument, I will introduce an anecdote which I had from Dr. Franklin.

While the Doctor resided in France as Minister from America during the war, he had numerous proposals made to him by projectors of every country and of every kind, who wished to go to the land that floweth with milk and honey, America; and among the rest, there was one who offered himself to be King. He introduced his proposal to the Doctor by letter, which is now in the hands of M. Beaumarchais, of Paris—stating first, that as the Americans had dismissed or sent away their King, that they would want another. Secondly, that himself was a Norman. Thirdly, that he was of a more ancient family than the Dukes of Normandy, and of a more honorable descent, his line having never been bastardized. Fourthly, that there was already a precedent in England of Kings coming out of Normandy, and on these grounds he rested his offer, enjoining that the Doctor would forward it to America. But as the Doctor neither did this, nor yet sent him an answer, the projector wrote a second letter in which he did not, it is true, threaten to go over and conquer America, but only with great dignity proposed that if his offer was not accepted, an acknowledgment of about £30,000 might be made to him for his generosity! Now, as all arguments respecting succession must necessarily connect that succession with some beginning, Mr. Burke's arguments on this subject go to show that there is no English origin of Kings, and that they are descendants of the Norman line in right of the Conquest. It may, therefore, be of service to his doctrine to make this story known and to inform him, that in case of that natural extinction to which all mortality is subject, Kings may again be had from Normandy, on more reasonable terms than William the Conqueror: and consequently that the good people of England at the Revolution of 1688, might have done much better, had such a generous Norman as this known their wants, and they had known his! The chivalry character which Mr. Burke so much admires, is certainly much easier to make a bargain with than a hard dealing Dutchman. But to return to the matters of the Constitution.

The French Constitution says, There shall be no titles; and, of consequence, all that class of equivocal generation which in some countries is called "aristocracy" and in others "nobility," is done away, and the peer is exalted into man.

Titles are but nicknames, and every nickname is a title. The thing is perfectly harmless in itself, but it marks a sort of foppery in the human character, which degrades it. It reduces man into the diminutive of man in things which are great, and the counterfeit of woman in things which are little. It talks about its fine blue ribbon like a girl, and shows its new garter like a child. A certain writer, of some antiquity, says: "When I was a child, I thought as a child; but when I became a man, I put away childish things."

It is, properly, from the elevated mind of France that the folly of titles has fallen. It has outgrown the baby cloaths of Count and Duke, and breeched itself in manhood. France has not levelled, it has exalted. It has put down the dwarf, to set up the man. The punyism of a senseless word like Duke or Count or Earl has ceased to please. Even those who possessed them have disowned the gibberish, and as they outgrew the rickets, have despised the rattle. The genuine mind of man, thirsting for its native home, society, contemns the gewgaws that separate him from it. Titles are like circles drawn by the magician's wand, to contract the sphere of man's felicity. He lived immured within the Bastille of a word, and surveys at a distance the envied life of man.

Is it, then, any wonder that titles should fall in France? Is it not a greater wonder they should be kept up anywhere? What are they? What is their worth, and "what is their amount"?

When we think or speak of a Judge or a General, we associate with it the ideas of office and character; we think of gravity in the one and bravery in the other; but when we use a word merely as a title, no ideas associate with it. Through all the vocabulary of Adam there is not such an animal as a Duke or a Count; neither can we connect any certain idea with the words. Whether they mean strength or weakness, wisdom or folly, a child or a man, or the rider or the horse, is all equivocal. What respect then can be paid to that which describes nothing, and which means nothing? Imagination has given figure and character to centaurs, satyrs, and down to all the fairy tribe; but titles baffle even the powers of fancy, and are a chimerical nondescript.

But this is not all. If a whole country is disposed to hold them in contempt, all their value is gone, and none will own them. It is common opinion only that makes them anything or nothing, or worse than nothing. There is no occasion to take titles away, for they take themselves away when society concurs to ridicule them. This species of imaginary consequence has visibly declined in every part of Europe, and it hastens to its exit as the world of reason continues to rise. There was a time when the lowest class of what are called nobility was more thought of than the highest is now, and when a man in armor riding through Christendom in quest of adventures was more stared at than a modern Duke. The world has seen this folly fall, and it has fallen by being laughed at, and the farce of titles will follow its fate. The patriots of France have discovered in good time that rank and dignity in society must take a new ground. The old one has fallen through. It must now take the substantial ground of character, instead of chimerical ground of titles; and they have brought their titles to the altar, and made of them a burnt-offering to Reason.

If no mischief had annexed itself to the folly of titles they would not have been worth a serious and formal destruction, such as the National Assembly have decreed them; and this makes it necessary to inquire farther into the nature and character of Aristocracy.

That, then, which is called Aristocracy in some countries and Nobility in others arose out of the Governments founded upon conquest. It was originally a military order for the purpose of supporting military Government (for such were all Governments founded in conquest); and to keep up a succession of this order for the purpose for which it was established, all the younger branches of those families were disinherited and the law of primogenitureship set up.

The nature and character of Aristocracy shows itself to us in this law. It is a law against every law of nature, and Nature herself calls for its destruction. Establish family justice and Aristocracy falls. By the aristocratical law of primogenitureship, in a family of six children five are exposed. Aristocracy has never more than one child. The rest are begotten to be devoured. They are thrown to the cannibal for prey, and the natural parent prepares the unnatural repast.

As everything which is out of nature in man affects, more or less, the interest of society, so does this. All the children which the Aristocracy disowns (which are all except the eldest) are, in general, cast like orphans on a parish, to be provided for by the public, but at a greater charge. Unnecessary offices and places in Governments and Courts are created at the expense of the public to maintain them.

With what kind of parental reflections can the father or mother contemplate their younger offspring? By Nature they are children, and by Marriage they are heirs; but by Aristocracy they are bastards and orphans. They are the flesh and blood of their parents in one line, and nothing akin to them in the other. To restore, therefore, parents to their children, and children to their parents—relations to each other, and man to society—and to exterminate the monster Aristocracy, root and branch—the French Constitution has destroyed the law of Primogenitureship. Here then lies the monster; and Mr. Burke, if he pleases, may write its epitaph.

Hitherto we have considered Aristocracy chiefly in one point of view. We have now to consider it in another. But whether we view it before or behind, or sideways, or any way else, domestically or publicly, it is still a monster.

In France Aristocracy had one feature less in its countenance than what it has in some other countries. It did not compose a body of hereditary legislators. It was not a "Corporation of Aristocracy," for such I have heard M. de la Fayette describe an English House of Peers. Let us then examine the grounds upon which

the French Constitution has resolved against having such a House in France.

Because, in the first place, as is already mentioned, Aristocracy is kept up by family tyranny and injustice.

Secondly, because there is an unnatural unfitness in an Aristocracy to be legislators for a Nation. Their ideas of distributive justice are corrupted at the very source. They begin life by trampling on all their younger brothers and sisters, and relations of every kind, and are taught and educated so to do. With what ideas of justice or honor can that man enter a house of legislation, who absorbs in his own person the inheritance of a whole family of children or doles out to them some pitiful portion with the insolence of a gift?

Thirdly, because the idea of hereditary legislators is as inconsistent as that of hereditary judges, or hereditary juries; and as absurd as an hereditary mathematician, or an hereditary wise man; and as ridiculous as an hereditary poet-laureate.

Fourthly, because a body of men, holding themselves accountable to nobody, ought not to be trusted by anybody.

Fifthly, because it is continuing the uncivilized principle of Governments founded in conquest, and the base idea of man having property in man, and governing him by personal right.

Sixthly, because Aristocracy has a tendency to degenerate the human species. By the universal economy of nature it is known, and by the instance of the Jews it is proved, that the human species has a tendency to degenerate, in any small number of persons, when separated from the general stock of society, and inter-marrying constantly with each other. It defeats even its pretended end, and becomes in time the opposite of what is noble in man. Mr. Burke talks of nobility; let him show what it is. The greatest characters the world have known have risen on the democratic floor. Aristocracy has not been able to keep a proportionate pace with Democracy. The artificial noble shrinks into a dwarf before the noble of Nature; and in the few instances of those (for there are some in all countries) in whom nature, as by a miracle, has survived in Aristocracy, those men despise it. But it is time to proceed to a new subject.

The French Constitution has reformed the condition of the clergy. It has raised the income of the lower and middle classes, and taken from the higher. None is now less than twelve hundred livres (fifty pounds sterling) nor any higher than about two or three thousand pounds. What will Mr. Burke place against this? Hear what he says. He says—

“That the people of England can see without pain or grudging, an archbishop precede a duke; they can see a Bishop of Durham, or a Bishop of Winchester in possession of £10,000 a-year; and can-

not see why it is in worse hands than estates to the like amount, in the lands of this earl or that 'squire."

And Mr. Burke offers this as an example to France.

As to the first part, whether the Archbishop precedes the Duke, or the Duke the Bishop, it is, I believe, to the people in general, somewhat like Sternhold and Hopkins, or Hopkins and Sternhold; you may put which you please first; and as I confess that I do not understand the merits of this case, I will not contend it with Mr. Burke.

But with respect to the latter, I have something to say:—Mr. Burke has not put the case right. The comparison is out of order, by being put between the bishop and the earl or the 'squire. It ought to be put between the bishop and the curate, and then it will stand thus:—

"The people of England can see without pain or grudging, a Bishop of Durham, or a Bishop of Winchester, in possession of ten thousand pounds a-year, and a curate on thirty or forty pounds a-year, or less."

No, sir, they certainly do not see those things without great pain or grudging. It is a case that applies itself to every man's sense of justice, and is one among many that calls aloud for a Constitution.

In France the cry of "the Church! the Church!" was repeated as often as in Mr. Burke's book, and as loudly as when the Dissenters' Bill was before the English Parliament; but the generality of the French clergy were not to be deceived by this cry any longer. They knew that whatever the pretence might be it was themselves who were one of the principal objects of it. It was the cry of the high beneficed clergy, to prevent any regulation of income taking place between those of ten thousand pounds a-year and the parish priest. They therefore joined their case to those of every other oppressed class of men, and by this union obtained redress.

The French Constitution has abolished Tythes, that source of perpetual discontent between the tythe-holder and the parishioner. When land is held on tythe, it is in the condition of an estate held between two parties; the one receiving one-tenth, and the other nine-tenths of the produce: and consequently, on principles of equity, if the estate can be improved, and made to produce by that improvement double or treble what it did before, or in any other ratio, the expense of such improvement ought to be borne in like proportion between the parties who are to share the produce. But this is not the case in tythes; the farmer bears the whole expense, and the tythe-holder takes a tenth of the improvement, in addition to the original tenth, and by this means gets the value of two-tenths instead of one. This is another case that calls for a Constitution.

The French Constitution hath abolished or renounced Toleration

and Intoleration also, and hath established Universal Right of Conscience.

Toleration is not the opposite of Intolerance, but is the counterfeit of it. Both are despotisms. The one assumes to itself the right of withholding Liberty of Conscience, and the other of granting it. The one is the Pope armed with fire and faggot, and the other is the Pope selling or granting indulgences. The former is Church and State, and the latter is Church and traffic.

But Toleration may be viewed in a much stronger light. Man worships not himself, but his Maker; and the liberty of conscience which he claims is not for the service of himself, but of his God. In this case, therefore, we must necessarily have the associated idea of two beings; the mortal who renders the worship, and the Immortal Being who is worshipped. Toleration, therefore, places itself, not between man and man, nor between Church and Church, nor between one denomination of religion and another, but between God and man; between the being who worships, and the Being who is worshipped; and by the same act of assumed authority by which it tolerates man to pay his worship, it presumptuously and blasphemously sets itself up to tolerate the Almighty to receive it.

Were a Bill brought into any Parliament, entitled, "An Act to tolerate or grant liberty to the Almighty to receive the worship of a Jew or a Turk," or "to prohibit the Almighty from receiving it," all men would startle and call it blasphemy. There would be an uproar. The presumption of toleration in religious matters would then present itself unmasked; but the presumption is not the less because the name of "Man" only appears to those laws, for the associated idea of the worshipped and the worshipper cannot be separated. Who then art thou, vain dust and ashes! by whatever name thou art called, whether a King, a Bishop, a Church, or a State, a Parliament, or anything else, that obtrudest thine insignificance between the soul of man and its maker? Mind thine own concerns. If he believes not as thou believest, it is a proof that thou believest not as he believeth, and there is no earthly power can determine between you.

With respect to what are called denominations of religion, if every one is left to judge of his own religion, there is no such thing as a religion that is wrong; but if they are to judge of each other's religion, there is no such thing as a religion that is right; and therefore all the world is right, or all the world is wrong. But with respect to religion itself, without regard to names, and as directing itself from the universal family of mankind to the Divine object of all adoration, it is man bringing to his Maker the fruits of his heart; and though those fruits may differ from each other like the fruits of the earth, the grateful tribute of every one is accepted.

A Bishop of Durham, or a Bishop of Winchester, or the Archbishop who heads the Dukes, will not refuse a tythe-sheaf of wheat because it is not a cock of hay, nor a cock of hay because it is not a sheaf of wheat; nor a pig, because it is neither one nor the other; but these same persons, under the figure of an established church, will not permit their Maker to receive the varied tythes of man's devotion.

One of the continual choruses of Mr. Burke's book is "Church and State." He does not mean some one particular Church, or some one particular State, but any Church and State; and he uses the term as a general figure to hold forth the political doctrine of always uniting the Church with the State in every country, and he censures the National Assembly for not having done this in France. Let us bestow a few thoughts on this subject.

All religions are in their nature kind and benign, and united with principles of morality. They could not have made proselytes at first by professing anything that was vicious, cruel, persecuting, or immoral. Like everything else, they had their beginning; and they proceeded by persuasion, exhortation, and example. How then is it that they lose their native mildness, and become morose and intolerant?

It proceeds from the connection which Mr. Burke recommends. By engendering the Church with the State, a sort of mule-animal, capable only of destroying, and not of breeding up, is produced, called The Church established by Law. It is stranger, even from its birth, to any parent mother, on whom it is begotten, and whom in time it kicks out and destroys.

The Inquisition in Spain does not proceed from the religion originally professed but from this mule-animal engendered between the Church and State. The burnings in Smithfield proceeded from the same heterogeneous production; and it was the regeneration of this strange animal in England afterwards that renewed rancour and irreligion among the inhabitants, and that drove the people called Quakers and Dissenters to America. Persecution is not an original feature in any religion; but it is always the strongly-marked feature of all law-religions, or religions established by law. Take away the law-establishment and every religion reassumes its original benignity. In America a Catholic priest is a good citizen, a good character, and a good neighbor; an Episcopalian minister is of the same description; and this proceeds, independently of the men, from there being no law establishment in America.

If also we view this matter in a temporal sense we shall see the ill effects it has had on the prosperity of nations. The union of Church and State has impoverished Spain. The revoking the Edict of Nantes drove the silk manufacture from France into England;

and Church and State are driving the cotton manufacture from England to America and France. Let then Mr. Burke continue to preach his antipolitical doctrine of Church and State. It will do some good. The National Assembly will not follow his advice, but will benefit by his folly. It was by observing the ill effects of it in England, that America has been warned against it; and it is by experiencing them in France, that the National Assembly have abolished it, and, like America, have established Universal Right of Conscience and Universal Right of Citizenship.

I will here cease the comparison with respect to the principles of the French Constitution, and conclude this part of the subject with a few observations on the organisation of the formal parts of the French and English Governments.

The executive power in each country is in the hands of a person stiled the King; but the French Constitution distinguishes between the King and the Sovereign. It considers the station of King as official, and places Sovereignty in the Nation.

The representatives of the Nation who compose the National Assembly, and who are the legislative power, originate in and from the people by election, as an inherent right in the people. In England it is otherwise; and this arises from the original establishment of what is called its monarchy; for as by the Conquest all the rights of the people or the Nation were absorbed into the hands of the Conqueror, and who added the title of King to that of Conqueror, those same matters which in France are now held as rights in the people, or in the Nation, are held in England as grants from what is called the Crown. The Parliament in England, in both its branches, was erected by patents from the descendants of the Conqueror. The House of Commons did not originate as a matter of right in the people to delegate or elect, but as a grant or boon.

By the French Constitution the Nation is always named before the King. The third article of the Declaration of Rights says: "The Nation is essentially the source (or fountain) of all sovereignty." Mr. Burke argues that in England a King is the fountain—that he is the fountain of all honour. But as this idea is evidently descended from the Conquest I shall make no other remark upon it, than that it is the nature of conquest to turn everything upside down; and as Mr. Burke will not be refused the privilege of speaking twice, and as there are but two parts in the figure, the fountain and the spout, he will be right the second time.

The French Constitution puts the legislative before the executive, the Law before the King; *la Loi, le Roi*. This also is in the natural order of things, because laws must have existence before they can have execution.

A King in France does not, in addressing himself to the National

Assembly, say "My Assembly," similar to the phrase used in England of "my Parliament"; neither can he use it consistently with the Constitution, nor could it be admitted. There may be propriety in the use of it in England, because as is before mentioned, both Houses of Parliament originated from what is called the Crown by patent or boon—and not from the inherent rights of the people, as the National Assembly does in France, and whose name designates its origin.

The President of the National Assembly does not ask the King to grant to the Assembly liberty of speech, as is the case with the English House of Commons. The constitutional dignity of the National Assembly cannot debase itself. Speech is, in the first place, one of the natural rights of man always retained; and with respect to the National Assembly the use of it is their duty, and the nation is their authority. They were elected by the greatest body of men exercising the right of election the European world ever saw. They sprung not from the filth of rotten boroughs, nor are they the vassal representatives of aristocratical ones. Feeling the proper dignity of their character, they support it. Their parliamentary language, whether for or against the question, is free, bold and manly, and extends to all the parts and circumstances of the case. If any matter or subject respecting the executive department or the person who presides in it (the King) comes before them it is debated on with the spirit of men, and the language of gentlemen; and their answer or their address is returned in the same stile. They stand not aloof with the gaping vacuity of vulgar ignorance, nor bend with the cringe of sycophantic insignificance. The graceful pride of truth knows no extremes, and preserves, in every latitude of life, the right-angled character of man.

Let us now look to the other side of the question. In the addresses of the English Parliaments to their Kings we see neither the intrepid spirit of the old Parliaments of France, nor the serene dignity of the present National Assembly; neither do we see in them anything of the style of English manners, which borders somewhat on bluntness. Since then they are neither of foreign extraction, nor naturally of English production, their origin must be sought for elsewhere, and that origin is the Norman Conquest. They are evidently of the vassalage class of manners, and emphatically mark the prostrate distance that exists in no other condition of men than between the conqueror and the conquered. That this vassalage idea and stile of speaking was not got rid of even at the Revolution of 1688, is evident from the declaration of Parliament to William and Mary in these words: "We do most humbly and faithfully submit ourselves, our heirs and posterities, for ever." Submission is

wholly a vassalage term, repugnant to the dignity of freedom, and an echo of the language used at the Conquest.

As the estimation of all things is by comparison, the Revolution of 1688, however from circumstances it may have been exalted beyond its value, will find its level. It is already on the wane, eclipsed by the enlarging orb of reason, and the luminous Revolutions of America and France. In less than another century it will go, as well as Mr. Burke's labors, "to the family vault of all the Capulets." Mankind will then scarcely believe that a country calling itself free would send to Holland for a man, and cloath him with power on purpose to put themselves in fear of him, and give him almost a million sterling a year for leave to submit themselves and their posterity, like bondmen and bondwomen, for ever.

But there is a truth that ought to be made known: I have had the opportunity of seeing it; which is, that notwithstanding appearances, there is not any description of men that despise monarchy so much as courtiers. But they well know, that if it were seen by others, as it is seen by them, the juggle could not be kept up. They are in the condition of men who get their living by a show, and to whom the folly of that show is so familiar that they ridicule it; but were the audience to be made as wise in this respect as themselves, there would be an end to the show and the profits with it. The difference between a republican and a courtier with respect to monarchy, is that the one opposes monarchy, believing it to be something; and the other laughs at it, knowing it to be nothing.

As I used sometimes to correspond with Mr. Burke, believing him then to be a man of sounder principles than his book shows him to be, I wrote to him last winter from Paris, and gave him an account how properly matters were going on. Among other subjects in that letter, I referred to the happy situation the National Assembly were placed in; that they had taken a ground on which their moral duty and their political interest were united. They have not to hold out a language which they do not themselves believe, for the fraudulent purpose of making others believe it. Their station requires no artifice to support it, and can only be maintained by enlightening mankind. It is not their interest to cherish ignorance, but to dispel it. They are not in the case of a ministerial or an opposition party in England, who, though they are opposed, are still united to keep up the common mystery. The National Assembly must throw open a magazine of light. It must show man the proper character of man; and the nearer it can bring him to that standard, the stronger the National Assembly becomes.

In contemplating the French Constitution, we see in it a rational order of things. The principles harmonize with the forms, and both with their origin. It may perhaps be said as an excuse for bad

forms, that they are nothing more than forms; but this is a mistake. Forms grow out of principles, and operate to continue the principles they grow from. It is impossible to practise a bad form on anything but a bad principle. It cannot be ingrafted on a good one; and wherever the forms in any government are bad, it is a certain indication that the principles are bad also.

I will here finally close this subject. I began it by remarking that Mr. Burke had voluntarily declined going into a comparison of the English and French Constitutions. He apologises (in page 241) for not doing it, by saying that he had not time. Mr. Burke's book was upwards of eight months in hand, and is extended to a volume of three hundred and sixty-six pages. As his omission does injury to his cause, his apology makes it worse; and men on the English side of the water will begin to consider, whether there is not some radical defect in what is called the English Constitution, that made it necessary for Mr. Burke to suppress the comparison, to avoid bringing it into view.

As Mr. Burke has not written on Constitutions so neither has he written on the French Revolution. He gives no account of its commencement or its progress. He only expresses his wonder. "It looks," says he, "to me, as if I were in a great crisis, not of the affairs of France alone, but of all Europe, perhaps of more than Europe. All circumstances taken together, the French Revolution is the most astonishing that has hitherto happened in the world."

As wise men are astonished at foolish things, and other people at wise ones, I know not on which ground to account for Mr. Burke's astonishment; but certain it is, that he does not understand the French Revolution. It has apparently burst forth like a creation from a chaos, but it is no more the consequence of a mental Revolution priorly existing in France. The mind of the Nation had changed beforehand, and the new order of things has naturally followed the new order of thoughts. I will here, as concisely as I can, trace out the growth of the French Revolution, and mark the circumstances that have contributed to produce it.

The despotism of Louis XIV., united with the gaiety of his Court, and the gaudy ostentation of his character had so humbled, and at the same time so fascinated the mind of France, that the people appear to have lost all sense of their own dignity, in contemplating that of their Grand Monarch; and the whole reign of Louis XV., remarkable only for weakness and effeminacy, made no other alteration than that of spreading a sort of lethargy over the nation, from which it showed no disposition to rise.

The only signs which appeared of the spirit of Liberty during those periods, are to be found in the writings of the French philosophers. Montesquieu, President of the Parliament of Bordeaux, went as far as a writer under a despotic Government could well proceed; and being

obliged to divide himself between principle and prudence, his mind often appears under a veil, and we ought to give him credit for more than he has expressed.

Voltaire, who was both the flatterer and the satirist of despotism, took another line. His forte lay in exposing and ridiculing the superstitions which priestcraft, united with statecraft, had interwoven with Governments. It was not from the purity of his principles, or his love of mankind (for satire and philanthropy are not naturally concordant), but from his strong capacity of seeing folly in its true shape, and his irresistible propensity to expose it, that he made those attacks. They were, however, as formidable as if the motives had been virtuous; and he merits the thanks rather than the esteem of mankind.

On the contrary, we find in the writings of Rousseau, and the Abbé Raynal, a loveliness of sentiment in favor of liberty, that excites respect, and elevates the human faculties; but having raised this animation, they do not direct its operations, and leave the mind in love with an object, without describing the means of possessing it.

The writings of Quesnay, Tugot, and the friends of these authors, are of the serious kind; but they labored under the same disadvantage with Montesquieu; their writings abound with moral maxims or Government, but are rather directed to economise and reform the administration of the Government, than the Government itself.

But all those writings and many others had their weight; and by the different manner in which they treated the subject of Government, Montesquieu by his judgment and knowledge of laws, Voltaire by his wit, Rousseau and Raynal by their animation, and Quesnay and Tugot by their moral maxims and systems of œconomy, readers of every class met with something to their taste, and a spirit of political inquiry began to diffuse through the Nation at the time the dispute between England the then colonies of America broke out.

In the war which France afterwards engaged in, it is very well known that the nation appeared to be beforehand with the French ministry. Each of them had its view: but those views were directed to different objects; the one sought liberty, and the other retaliation on England. The French officers and soldiers, who after this went to America, were eventually placed in the school of Freedom, and learned the practise as well as the principles of it by heart.

As it was impossible to separate the military events which took place in America from the principles of the American Revolution, the publication of those events in France necessarily connected themselves with the principles which produced them. Many of the facts were in themselves principles; such as the Declaration of American Independence, and the treaty of alliance between France and America, which recognized the natural right of man, and justified resistance to

oppression. The then Minister of France, Count Vergennes, was not the friend of America; and it is both justice and gratitude to say, that it was the Queen of France who gave the cause of America a fashion at the French Court. Count Vergennes was the personal and social friend of Dr. Franklin; and the Doctor had obtained, by his sensible gracefulness, a sort of influence over him; but with respect to principles Count Vergennes was a despot.

The situation of Dr. Franklin, as Minister from America to France, should be taken into the chain of circumstances. The diplomatic character is of itself the narrowest sphere of society that man can act in. It forbids intercourse by the reciprocity of suspicion; and a diplomatic is a sort of unconnected atom, continually repelling and repelled. But this was not the case with Dr. Franklin. He was not the diplomatic of a Court, but of MAN. His character as a philosopher had been long established, and his circle of society in France was universal. Count Vergennes resisted for a considerable time the publication in France of the American Constitutions, translated into the French language: but even in this he was obliged to give way to public opinion, and a sort of propriety in admitting to appear what he had undertaken to defend. The American Constitutions were to Liberty what a grammar is to language: they define its parts of speech, and practically construct them into syntax. The peculiar situation of the then Marquis de la Fayette is another link in the great chain. He served in America as an American officer under a commission of Congress, and by the universality of his acquaintance was in close friendship with the civil government of America, as well as with the military line. He spoke the language of the country, entered into the discussions on the principles of Government, and was always a welcome friend at any election.

When the war closed, a vast reinforcement to the cause of Liberty spread itself over France, by the return of the French officers and soldiers. A knowledge of the practise was then joined to the theory; and all that was wanting to give it real existence was opportunity. Man cannot, properly speaking, make circumstances for his purpose, but he always has it in his power to improve them when they occur, and this was the case in France.

M. Neckar was displaced in May, 1781; and by the ill-management of the finances afterwards, and particularly during the extravagant administration of M. Calonne, the revenue of France, which was nearly twenty-four millions sterling per year, was become unequal to the expenditure, not because the revenue had decreased, but because the expenses had increased; and this was a circumstance which the Nation laid hold of to bring forward a Revolution. The English Minister, Mr. Pitt, has frequently alluded to the state of the French finances in his budgets, without understanding the subject. Had the

French Parliaments been as ready to register edicts for new taxes as an English Parliament is to grant them, there had been no derangement in the finances, nor yet any Revolution; but this will better explain itself as I proceed. It will be necessary here to show how taxes were formerly raised in France. The King, or rather the Court or Ministry acting under the use of that name, framed the edicts for taxes at their own discretion, and sent them to the Parliaments to be registered; for until they were registered by the Parliaments they were not operative. Disputes had long existed between the Court and the Parliaments with respect to the extent of the Parliaments' authority on this head. The Court insisted that the authority of Parliaments went no farther than to remonstrate or show reasons against the tax, reserving to itself the right of determining whether the reasons were well or ill-founded; and in consequence thereof, either to withdraw the edict as a matter of choice, or to order it to be enregistered as a matter of authority. The Parliaments on their part insisted that they had not only a right to remonstrate, but to reject; and on this ground they were always supported by the Nation. But to return to the order of my narrative. M. Calonne wanted money: and as he knew the sturdy disposition of the Parliaments with respect to new taxes, he ingeniously sought either to approach them by a more gentle means than that of direct authority, or to get over their heads by a manœuvre; and for this purpose he revived the project of assembling a body of men from the several provinces, under the style of an "Assembly of the Notables," or men of note, who met in 1787, and who were either to recommend taxes to the Parliaments, or to act as a Parliament themselves. An assembly under this name had been called in 1617.

As we are to view this as the first practical step towards the Revolution, it will be proper to enter into some particulars respecting it. The Assembly of the Notables has in some places been mistaken for the States-General, but was wholly a different body, the States-General being always by election. The persons who composed the Assembly of the Notables were all nominated by the King, and consisted of one hundred and forty members. But as M. Calonne could not depend upon a majority of this Assembly in his favour, he very ingeniously arranged them in such a manner as to make forty-four a majority of one hundred and forty; to effect this he disposed of them into seven separate committees, of twenty members each. Every general question was to be decided, not by a majority of persons, but by a majority of committees; and as eleven votes would make a majority in a committee, and four committees a majority of seven, M. Calonne, had good reason to conclude that as forty-four would determine any general question he could not be outvoted. But all his plans deceived him, and in the event became his overthrow. The

then Marquis de la Fayette was placed in the second committee, of which the Count D'Artois was president, and as money matters were the object it naturally brought into view worry circumstance connected with it. M. de la Fayette made a verbal charge against Calonne for selling crown lands to the amount of two millions of livres, in a manner that appeared to be unknown to the King. The Count D'Artois (as if to intimidate, for the Bastille was then in being) asked the Marquis if he would render the charge in writing? He replied that he would. The Count D'Artois did not demand it, but brought a message from the King to the purport. M. de la Fayette then delivered in his charge in writing, to be given to the King, undertaking to support it. No further proceedings were had upon this affair, but M. Calonne was soon after dismissed by the King and sent off to England.

As M. de la Fayette, from the experience of what he had seen in America, was better acquainted with the science of civil Government than the generality of the members who composed the Assembly of the Notables could then be, the brunt of the business fell considerably to his share. The plan of those who had a Constitution in view was to contend with the Court on the ground of taxes, and some of them openly professed their object. Disputes frequently arose between Count D'Artois and M. de la Fayette upon various subjects. With respect to the arrears already incurred the latter proposed to remedy them by accommodating the expenses to the revenue instead of the revenue to the expenses; and as objects of reform he proposed to abolish the Bastille and all the State prisons throughout the Nation (the keeping of which was attended with great expense), and to suppress *lettres de cachet*; but those matters were not then much attended to, and with respect to *lettres de cachet*, a majority of the nobles appeared to be in favour of them.

On the subject of supplying the Treasury by new taxes the Assembly declined taking the matter on themselves, concurring in the opinion that they had not authority. In a debate on this subject M. de la Fayette said that raising money by taxes could only be done by a National Assembly, freely elected by the people, and acting as their representatives. Do you mean, said the Count D'Artois, the States-General? M. de la Fayette replied that he did. Will you, said the Count D'Artois, sign what you say to be given to the King? The other replied that he would not only do this but that he would go farther, and say that the effectual mode would be for the King to agree to the establishment of a Constitution.

As one of the plans had thus failed, that of getting the Assembly to act as a Parliament, the other came into view, that of recommending. On this subject the Assembly agreed to recommend two new taxes to be enregistered by the Parliament: the one a stamp-tax and

the other a territorial or sort of land-tax. The two have been estimated at about five millions sterling per annum. We have now to turn our attention to the Parliaments, on whom the business was again devolving.

The Archbishop of Toulouse (since Archbishop of Sens, and now a Cardinal) was appointed to the administration of the finances soon after this dismissal of Calonne. He was also made Prime Minister, an office that did not always exist in France. When this office did not exist, the chiefs of the principal departments transacted business immediately with the King, but when a Prime Minister was appointed they did business only with him. The Archbishop arrived to more state-authority than any Minister since the Duke de Choiseul, and the Nation was strongly disposed in his favor; but by a line of conduct scarcely to be accounted for he perverted every opportunity, turned out a despot, and sunk into disgrace, and a Cardinal.

The Assembly of the Notables having broken up, the new Minister sent the edicts for the two taxes recommended by the Assembly to be enregistered. They of course came first before the Parliament of Paris, who returned for answer, That with such a revenue as the nation then supported the name of taxes ought to be mentioned but for the purpose of reducing them, and threw both the edicts out.

On this refusal the Parliament was ordered to Versailles, where, in the usual form, the King held what under the old Government was called a Bed of Justice; and the two edicts were enregistered in presence of the Parliament by an order of State in the manner mentioned in page 117.

On this the Parliament immediately returned to Paris, renewed their session in form, and ordered the enregistering to be struck out, declaring that everything done at Versailles was illegal. All the members of the Parliament were then served with *Lettres de Cachet*, and exiled to Trois; but as they continued as inflexible in exile as before, and as vengeance did not supply the place of taxes, they were after a short time recalled to Paris.

The edicts were again tendered to them, and the Count D'Artois undertook to act as representative of the King. For this purpose he came from Versailles to Paris, in a train of procession; and the Parliament were assembled to receive him. But show and parade had lost their influence in France; and whatever ideas of importance he might set off with, he had to return with those of mortification and disappointment. On alighting from his carriage to ascend the steps of the Parliament House, the crowd (which was numerously collected) threw out trite expressions saying: "This is Monsieur D'Artois, who wants more of our money to spend." The marked disapprobation which he saw impressed him with apprehensions, and the word *Aux armes!* (To arms!) was given out by the officer of the guard who

attended him. It was so loudly vociferated, that it echoed through the avenues of the House, and produced a temporary confusion. I was then standing in one of the apartments through which he had to pass, and could not avoid reflecting how wretched was the condition of a disrespected man.

He endeavored to impress the Parliament by great words, and opened his authority by saying, "The King, our Lord and Master," The Parliament received him very coolly and with their usual determination not to register the taxes; and in this manner the interview ended.

After this a new subject took place: In the various debates and contests which arose between the Court and the Parliaments on the subject of taxes, the Parliament of Paris at last declared that although it had been customary for Parliaments to enregister edicts for taxes as a matter of convenience, the right belonged only to the States-General; and that, therefore, the Parliament could no longer with propriety continue to debate on what it had not authority to act, The King after this came to Paris and held a meeting with the Parliament, in which he continued from ten in the morning till about six in the evening, and, in a manner that appeared to proceed from him as if unconsulted upon with the Cabinet of Ministry, gave his word to the Parliament that the States-General should be convened.

But after this another scene arose, on a ground different from all the former. The Minister and the Cabinet were averse to calling the States-General. They well knew that if the States-General were assembled, themselves must fall; and as the King had not mentioned any time, they hit on a project calculated to elude, without appearing to oppose.

For this purpose, the Court set about making a sort of Constitution itself. It was principally the work of M. Lamoignon, Keeper of the Seals, who afterwards shot himself. This new arrangement consisted in establishing a body under the name of a *Cour Plénière*, or full Court, in which were invested all the powers that the Government might have occasion to make use of. The persons composing this Court were to be nominated by the King. The contended right of taxation was given up on the part of the King, and a new criminal code of laws and law proceedings was substituted in the room of the former. The thing, in many points, contained better principles than those upon which the Government had hitherto been administered; but with respect to the *Cour Plénière*, it was no other than a medium through which despotism was to pass, without appearing to act directly from itself.

The Cabinet had high expectations from their new contrivance. The persons who were to compose the *Cour Plénière* were already nominated; and as it was necessary to carry a fair appearance, many

of the best characters in the Nation were appointed among the number. It was to commence on the 8th of May, 1788; but an opposition arose to it on two grounds—the one as to principle, the other as to form.

On the ground of principle it was contended that Government had not a right to alter itself, and that if the practice was once admitted it would grow into a principle and be made a precedent for any future alterations the Government might wish to establish; that the right of altering the Government was a national right, and not a right of Government. And on the ground of form it was contended that the *Cour Plénière* was nothing more than a larger Cabinet.

The then Duke de la Rouchefoucault, Luxembourg, De Noailles, and many others, refused to accept the nomination, and strenuously opposed the whole plan. When the edict for establishing this new Court was sent to the Parliaments to be enregistered and put into execution, they resisted also. The Parliament of Paris not only refused, but denied the authority; and the contest renewed itself between the Parliament and the Cabinet more strongly than ever. While the Parliament were sitting in debate on this subject, the Ministry ordered a regiment of soldiers to surround the House and form a blockade. The members sent out for beds and provisions, and lived as in a besieged citadel; and as this had no effect, the commanding officer was ordered to enter the Parliament House and seize them, which he did, and some of the principal members were shut up in different prisons. About the same time a deputation of persons arrived from the province of Brittany to remonstrate against the establishment of the *Cour Plénière*, and those the Archbishop sent to the Bastille. But the spirit of the Nation was not to be overcome, and it was so fully sensible of the strong ground it had taken, that of withholding taxes, that it contented itself with keeping up a sort of quiet resistance, which effectually overthrew all the plans at that time formed against it. The project of the *Cour Piénière* was at last obliged to be given up, and the Prime Minister not long afterwards followed its fate, and M. Neckar was recalled into office.

The attempt to establish the *Cour Plénière* had an effect upon the Nation which itself did not perceive. It was a sort of new form of Government that insensibly served to put the old one out of sight and to unhinge it from the superstitious authority of antiquity. It was Government dethroning Government; and the old one by attempting to make a new one, made a chasm.

The failure of this scheme renewed the subject of convening the States-General; and this gave rise to a new series of politics.

There was no settled form for convening the States-General; all that it positively meant was a deputation from what was then called

the Clergy, the Noblesse, and the Commons; but their numbers or their proportions had not been always the same. They had been convened only on extraordinary occasions, the last of which was in 1614; their numbers were then in equal proportions, and they voted by orders.

It could not well escape the sagacity of M. Neckar, that the mode of 1614 would answer neither the purpose of the then Government nor of the Nation. As matters were at that time circumstanced it would have been too contentious to agree upon anything. The debates would have been endless upon privileges and exemptions, in which, neither the wants of the Government nor the wishes of the Nation for a Constitution would have been attended to. But as he did not choose to take the decision upon himself, he summoned again the Assembly of the Notables and referred it to them. This body was in general interested in the decision, being chiefly of the Aristocracy and the high-paid Clergy, and they decided in favor of the mode of 1614. This decision was against the sense of the Nation, and also against the wishes of the Court; for the Aristocracy opposed itself to both and contended for privileges independent of either. The subject was taken up by the Parliament, who recommended that the number of the Commons should be equal to the other two: and they should all sit in one house and vote in one body. The number finally determined on was 1200; 600 to be chosen by the Commons (and this was less than their proportion ought to have been when their worth and consequence is considered on a national scale), 300 by the Clergy, and 300 by the Aristocracy; but with respect to the mode of assembling themselves, whether together or apart, or the manner in which they should vote, these matters were referred.

The election that followed was not a contested election, but an animated one. The candidates were not men, but principles. Societies were formed in Paris, and committees of correspondence and communication established throughout the Nation, for the purpose of enlightening the people, and explaining to them the principles of civil Government; and so orderly was the election conducted, that it did not give rise even to the rumor of tumult.

The States-General were to meet at Versailles in April, 1789, but did not assemble till May. They situated themselves in three separate chambers, or rather the Clergy and the Aristocracy withdrew each into a separate chamber.

The majority of the Aristocracy claimed what they called the privilege of voting as a separate body, and of giving their consent or their negative in that manner; and many of the Bishops and the high-beneficed Clergy claimed the same privilege on the part of their Order.

The *Tiers Etat* (as they were then called) disowned any knowledge

of artificial Orders and artificial privileges; and they were not only resolute on this point, but somewhat disdainful. They began to consider Aristocracy as a kind of fungus growing out of the corruption of society, that could not be admitted even as a branch of it; and from the disposition the Aristocracy had shown by upholding *Lettres de Cachet* and in sundry other instances, it was manifest that no Constitution could be formed by admitting men in any other character than as National Men.

After various altercations on this head, the *Tiers Etat* or Commons (as they were then called) declared themselves (on a motion made for that purpose by the Abbé Sieyès) "THE REPRESENTATIVES OF THE NATION; and that the two Orders could be considered but as deputies of corporations, and could only have a deliberative voice when they assembled in a national character with the national representatives."

This proceeding extinguished the stile of the *Etats Généraux*, or States-General, and erected it into the stile it now bears, that of *L'Assemblée Nationale*, or National Assembly.

This motion was not made in a precipitate manner. It was the result of cool deliberation, and concerted between the national representatives and the patriotic members of the two chambers, who saw into the folly, mischief and injustice of artificial privileged distinctions.

It was become evident, that no Constitution, worthy of being called by that name, could be established on anything less than a national ground. The Aristocracy had hitherto opposed the despotism of the Court, and affected the language of patriotism; but it opposed it as its rival (as the English Barons opposed King John), and it now opposed the nation from the same motives.

On carrying this motion, the national representatives, as had been concerted, sent an invitation to the two chambers, to unite with them in a National character, and proceed to business.

A majority of the Clergy, chiefly of the parish priests, withdrew from the clerical chamber, and joined the Nation; and forty-five from the other chamber joined in like manner.

There is a sort of secret history belonging to this last circumstance, which is necessary to its explanation; it was not judged prudent that all the patriotic members of the chamber styling itself the Nobles, should quit it at once; and in consequence of this arrangement, they drew off by degrees, always leaving some, as well to reason the case, as to watch the suspected.

In a little time the numbers increased from forty-five to eighty, and soon after to a greater number; which, with the majority of the clergy, and the whole of the national representatives, put the malcontents in a very diminutive condition.

The King, who, very different from the general class called by that name, is a man of a good heart, showed himself disposed to recom-

mend a union of the three chambers, on the ground the National Assembly had taken; but the malcontents exerted themselves to prevent it, and began now to have another project in view.

Their numbers consisted of a majority of the aristocratical chamber and a minority of the clerical chamber, chiefly of Bishops and high-beneficed Clergy; and these men were determined to put everything to issue, as well by strength as by stratagem.

They had no objection to a Constitution; but it must be such a one as themselves should dictate, and suited to their own views and particular situations.

On the other hand, the Nation disowned knowing anything of them but as citizens, and was determined to shut out all such upstart pretensions. The more Aristocracy appeared, the more it was despised; there was a visible imbecility and want of intellects in the majority—a sort of *je ne sais quoi*, that while it affected to be more than citizen, was less than man. It lost ground from contempt more than from hatred; and was rather jeered at as an ass than dreaded as a lion. This is the general character of Aristocracy, or what are called Nobles or Nobility, or rather No-ability, in all countries.

The plan of the malcontents consisted now of two things; either to deliberate and vote by chambers (or orders), more especially on all questions respecting a Constitution (by which the aristocratical chamber would have had a negative on any article of the Constitution); or, in case they could not accomplish this object, to overthrow the National Assembly entirely.

To effect or other of those objects they began now to cultivate a friendship with the despotism they had hitherto attempted to rival, and the Count D'Artois became their chief.

The King (who has since declared himself deceived into their measures) held, according to the old form, a Bed of Justice, in which he accorded to the deliberation and vote *par tête* (by head) upon several subjects; but reserved the deliberation and vote upon all questions respecting a Constitution to the three chambers separately.

This declaration of the King was made against the advice of M. Neckar, who now began to perceive that he was growing out of fashion at Court, and that another Minister was in contemplation.

As the form of sitting in separate chambers was yet apparently kept up, though essentially destroyed, the national representatives immediately after this declaration of the King restored to their own chamber to consult on a protest against it; and the minority of the chamber (calling itself the Nobles), who had joined the national cause, retired to a private house to consult in like manner.

The malcontents had by this time concerted their measures with the Court, which Count D'Artois undertook to conduct; and as they saw from the discontent which the declaration excited, and the op-

position making against it, that they could not obtain a control over the intended Constitution by a separate vote, they prepared themselves for their final object—that of conspiring against the National Assembly, and overthrowing it.

The next morning the door of the chamber of the National Assembly was shut against them, and guarded by troops; and the members were refused admittance. On this day they withdrew to a tennis-ground in the neighborhood of Versailles, as the most convenient place they could find, and, after renewing their session, took an oath never to separate from each other, under any circumstance whatever, death excepted, until they had established a Constitution. As the experiment of shutting up the house had no other effect than that of producing a closer connection in the members, it was opened again the next day, and the public business recommended in the usual place.

We now are to have in view the forming of the new Ministry, which was to accomplish the overthrow of the National Assembly. But as force would be necessary, orders were issued to assemble thirty thousand troops, the command of which was given to Broglio, one of the new-intended Ministry, who was recalled from the country for this purpose. But as some management was necessary to keep this plan concealed till the moment it should be ready for execution, it is to this policy that a declaration made by Count D'Artois must be attributed, and which is here proper to be introduced.

It could not but occur, while the malcontents continued to resort to their chambers separate from the National Assembly, that more jealousy would be excited than if they were mixed with it, and that the plot might be suspected. But as they had taken their ground, and wanted a pretense for quitting it, it was necessary that one should be devised. This was effectually accomplished by a declaration made by the Count D'Artois: "That if they took not a part in the National Assembly, the life of the King would be endangered;" on which they quitted their chambers, and mixed with the Assembly, in one body.

At the time this declaration was made, it was generally treated as a piece of absurdity in Count D'Artois, and calculated merely to relieve the outstanding members of the two chambers from the diminutive situation they were put in; and if nothing more had followed, this conclusion would have been good. But as things best explain themselves by their events, this apparent union was only a cover to the machinations which were secretly going on; and the declaration accommodated itself to answer that purpose. In a little time the National Assembly found itself surrounded by troops, and thousands more were daily arriving. On this a very strong declaration was made by the National Assembly to the King, remonstrating on the impropriety of the measure, and demanding the reason. The King,

who was not in the secret of this business, as himself afterwards declared, gave substantially for answer, that he had no other object in view than to preserve the public tranquillity, which appeared to be much disturbed.

But in a few days from this time the plot unraveled itself. M. Neckar and the Ministry were displaced, and a new one formed of the enemies of the Revolution; and Broglio, with between twenty-five and thirty thousand foreign troops, was arrived to support them. The mask was now thrown off, and matters were come to a crisis. The event was that in a space of three days the new Ministry and their abettors found it prudent to fly the Nation; the Bastille was taken, and Broglio and his foreign troops dispersed, as is already related in the former part of this work.

There are some curious circumstances in the history of this short-lived Ministry, and this short-lived attempt at a counter-revolution. The Palace of Versailles, where the Court was sitting, was not more than four hundred yards distant from the hall where the National Assembly was sitting. The two places were at this moment like the separate headquarters of two combatant armies; yet the Court was as perfectly ignorant of the information which had arrived from Paris to the National Assembly, as if it had resided at a hundred miles distance. The then Marquis de la Fayette, who (as has been already mentioned) was chosen to preside in the National Assembly on this particular occasion, named by order of the Assembly three successive deputations to the King, on the day and up to the evening on which the Bastille was taken, to inform and confer with him on the state of affairs; but the Ministry, who knew not so much as that it was attacked, precluded all communication, and were solacing themselves how dexterously they had succeeded; but in a few hours the accounts arrived so thick and fast that they had to start from their desks and run. Some set off in one disguise, and some in another, and none in their own character. Their anxiety now was to outride the news, lest they should be stopped, which, though it flew fast, flew not so fast as themselves.

It is worth relating that the National Assembly neither pursued those fugitive conspirators, nor took any notice of them, nor sought to retaliate in any shape whatever.

Occupied with establishing a Constitution founded on the Rights of Man and the Authority of the People, the only authority of which Government has a right to exist in any country, the National Assembly felt none of those mean passions which mark the character of impertinent Governments, founding themselves on their own authority, or on the absurdity of hereditary succession. It is the faculty of the human mind to become what it contemplates, and to act in unison with its object.

The conspiracy being thus dispersed, one of the first works of the National Assembly, instead of vindictive proclamations, as has been the case with other Governments, published a Declaration of the Rights of Man, as the basis on which the new Constitution was to be built, and which is here subjoined.

ESSAYS OF THOMAS CARLYLE

(Thomas Carlyle, Scottish historian, essayist and philosopher, was born in Ecclefechan, Dumfriesshire, 1795, the second son of James Carlyle, a stonemason and later a farmer. Thomas Carlyle was educated at the parish school, Annan Academy and in 1809 became a student of Edinburgh University. Obtaining a slender knowledge of the classics and mastering mathematics, he was appointed mathematical master at Annan Academy. In 1818 he returned to Edinburgh where he studied law and took private students. Next he began a literary career and was engaged by Dr. Brewster to write articles for the "Edinburgh Encyclopedia". At this period he wrote his "Life of Schiller", and translated Goethe's "Wilhelm Meister". He travelled to London and Paris, and made the acquaintance of Coleridge and Hazlitt and others, and received encouraging letters from Goethe. Among his great works, the outstanding are, "Sartor Resartus", "French Revolution", "Heroes and Hero-Worship", and "Oliver Cromwell." His essays are of the highest quality. The features being remarkable humor, sarcasm, and insight. He died in 1881.)

BIOGRAPHY

MAN's sociality of nature evinces itself, in spite of all that can be said, with abundant evidence by this one fact, were there no other: the unspeakable delight he takes in Biography. It is written, "The proper study of mankind is man;" to which study, let us candidly admit, he, by true or by false methods, applies himself, nothing loath. "Man is perennially interesting to man; nay, if we look strictly to it, there is nothing else interesting." How inexpressibly comfortable to know our fellow-creature; to see into him, understand his goings-forth, decipher the whole heart of his mystery: nay, not only to see in to him, but even to see out of him, to view the world altogether as he views it; so that we can theoretically construe him, and could almost practically personate him; and do now thoroughly discern both what manner of man he is, and what manner of thing he has got to work on and live on!

A scientific interest and a poetic one alike inspire us in this matter. A scientific: because every mortal has a Problem of Existence set before him, which, were it only, what for the most it is, the Problem of keeping soul and body together, must be to a certain extent original, unlike every other; and yet, at the same time, so like every other; like our own, therefore; instructive, moreover, since we also are indentured to live. A poetic interest still more: for precisely

this same struggle of human Freewill against material Necessity, which every man's Life, by the mere circumstance that the man continues alive, will more or less victoriously exhibit,—is that which above all else, or rather inclusive of all else, calls the Sympathy of mortal hearts into action; and whether as acted, or as represented and written of, not only is Poetry, but is the sole Poetry possible. Borne onwards by which two all-embracing interests, may the earnest Lover of Biography expand himself on all sides, and indefinitely enrich himself. Looking with the eyes of every new neighbor, he can discern a new world different for each: feeling with the heart of every neighbor, he lives with every neighbor's life, even as with his own. Of these millions of living men, each individual is a mirror to us; a mirror both scientific and poetic; or, if you will, both natural and magical;—from which one would so gladly draw aside the gauze veil; and, peering therein, discern the image of his own natural face, and the supernatural secrets that prophetically lie under the same!

Observe, accordingly, to what extent, in the actual course of things, this business of Biography is practised and relished. Define to thyself, judicious Reader, the real significance of these phenomena, named Gossip, Egoism, Personal Narrative (miraculous or not), Scandal, Raillery, Slander, and such-like; the sum-total of which (with some fractional addition of a better ingredient, generally too small to be noticeable) constitutes that other grand phenomenon still called "Conversation." Do they not mean wholly: Biography and Autobiography? Not only in the common Speech of men; but in all Art too, which is or should be the concentrated and conserved essence of what men can speak and show, Biography is almost the one thing needful.

Even in the highest works of Art, our interest, as the critics complain, is too apt to be strongly or even mainly of a Biographic sort. In the Art we can nowise forget the Artist: while looking on the Transfiguration, while studying the Iliad, we ever strive to figure to ourselves what spirit dwelt in Raphael; what a head was that of Homer, wherein, woven of Elysian light and Tartarean gloom, that old world fashioned itself together, of which these written Greek characters are but a feeble though perennial copy. The Painter and the Singer are present to us; we partially and for the time become the very Painter and the very Singer, while we enjoy the Picture and the Song. Perhaps too, let the critic say what he will, this is the highest enjoyment, the clearest recognition, we can have of these. Art indeed is Art; yet Man also is Man. Had the Transfiguration been painted without human hand; had it grown merely on the canvas, say by atmospheric influences, as lichen-pictures do on rocks,—it were a grand Picture doubtless; yet nothing like so grand as the Picture, which, on opening our eyes, we everywhere in Heaven and

in Earth see painted; and everywhere pass over with indifference,—because the Painter was not a Man. Think of this; much lies in it. The Vatican is great; yet poor to Chimborazo or the Peak of Teneriffe: its dome is but a foolish Big-endian or Little-endian chip of an egg-shell, compared with the star-fretted Dome where Arcturus and Orion glance forever; which latter, notwithstanding, who looks at, save perhaps some necessitous star-gazer bent to make Almanacs; some tick-quilted watchman, to see what weather it will prove? The Biographic interest is wanting: no Michael Angelo was He who built that "Temple of Immensity;" therefore do we, pitiful Little-nesses as we are, turn rather to wonder and to worship in the little toybox of a Temple built by our like.

Still more decisively, still more exclusively does the Biographic interest manifest itself, as we descend into lower regions of spiritual communication; through the whole range of what is called Literature. Of history, for example, the most honored, if not honorable species of composition, is not the whole purport Biographic? "History," it has been said, "is the essence of innumerable Biographies." Such, at least, it should be: whether it is, might admit of question. But, in any case, what hope have we in turning over those old interminable Chronicles, with their garrulities and insipidities; or still worse, in patiently examining those modern Narrations, of the Philosophic kind, where "Philosophy, teaching by Experience," has to sit like owl on housetop, seeing nothing, understanding nothing, uttering only, with such solemnity, her perpetual most wearisome hoo-hoo:—what hope have we, except the for most part fallacious one of gaining some acquaintance with our fellow-creatures, though dead and vanished, yet dear to us; how they got along in those old days, suffering and doing; to what extent, and under what circumstances, they resisted the Devil and triumphed over him, or struck their colors to him, and were trodden under foot by him; how, in short, the perennial Battle went, which men name Life, which we also in these new days, with indifferent fortune, have to fight, and must bequeath to our sons and grandsons to go on fighting,—till the Enemy one day be quite vanquished and abolished, or else the great Night sink and part the combatants; and thus, either by some Millennium or some new Noah's Deluge, the Volume of Universal History wind itself up! Other hope, in studying such Books, we have none: and that it is a deceitful hope, who that has tried knows not? A feast of widest Biographic insight is spread for us; we enter full of hungry anticipations: alas, like so many other feasts, which Life invites us to, a mere Ossian's "feast of shells,"—the food and liquor being all emptied out and clean gone, and only the vacant dishes and deceitful emblems thereof left! Your modern Historical Restaurateurs are indeed little better than high-priests of Famine; that keep choic-

est china dinner-sets, only no dinner to serve them. Yet such is our Biographic appetite, we run trying from shop to shop, with ever new hope; and, unless we could eat the wind, with ever new disappointment.

Again, consider the whole class of Fictitious Narratives; from the highest category of epic or dramatic Poetry, in Shakspeare and Homer, down to the lowest of froth Prose in the Fashionable Novel. What are all these but so many mimic Biographies? Attempts, here by an inspired Speaker, there by an uninspired Babbler, to deliver himself, more or less ineffectually, of the grand secret wherewith all hearts labor oppressed: The significance of Man's Life;—which deliverance, even as traced in the unfurnished head, and printed at the Minerva Press, finds readers. For, observe, though there is a greatest Fool, as a superlative in every kind; and the most Foolish man in the Earth is now indubitably living and breathing, and did this morning or lately eat breakfast, and is even now digesting the same; and looks out on the world with his dim horn-eyes, and inwardly forms some unspeakable theory thereof: yet where shall the authentically Existing be personally met with! Can one of us, otherwise than by guess, know that we have got sight of him, have orally communed with him? To take even the narrower sphere of this our English Metropolis, can any one confidently say to himself, that he has conversed with the identical, individual Stupidest man now extant in London? No one. Deep as we dive in the Pro-found, there is ever a new depth opens: where the ultimate bottom may lie, through what new scenes of being we must pass before reaching it (except that we know it does lie somewhere, and might by human faculty and opportunity be reached), is altogether a mystery to us. Strange, tantalizing pursuit! We have the fullest assurance, not only that there is a Stupidest of London men actually resident, with bed and board of some kind, in London; but that several persons have been or perhaps are now speaking face to face with him: while for us, chase it as we may, such scientific blessedness will too probably be forever denied!—But the thing we meant to enforce was this comfortable fact, that no known Head was so wooden, but there might be other heads to which it were a genius and Friar Bacon's Oracle. Of no given Book, not even of a Fashionable Novel, can you predicate with certainty that its vacuity is absolute; that there are not other vacuities which shall partially replenish themselves therefrom, and esteem it a *plenum*. How knowest thou, may the distressed Novelwright exclaim, that I, here where I sit, am the Foolishest of existing mortals; that this my Long-ear of a Fictitious Biography shall not find one and the other, into whose still longer ears it may be the means, under Providence, of instilling somewhat? We answer, None knows, none can certainly know: therefore, write on.

worthy Brother, even as thou canst, even as it has been given thee.

Here, however, in regard to "Fictitious Biographies," and much other matter of like sort, which the greener mind in these days indicteth, we may as well insert some singular sentences on the importance and significance of Reality, as they stand written for us in Professor Gottfried Sauerteig's *Ästhetische Springwurzeln*; a Work, perhaps, as yet new to most English readers. The Professor and Doctor is not a man whom we can praise without reservation; neither shall we say that his *Springwurzeln* (a sort of magical picklocks, as he affectedly names them) are adequate to "start" every bolt that locks-up an æsthetic mystery: nevertheless, in his crabbed, one-sided way, he sometimes hits masses of the truth. We endeavor to translate faithfully, and trust the reader will find it worth serious perusal:

"The significance, even for poetic purposes," says Sauerteig, "that lies in Reality is too apt to escape us; is perhaps only now beginning to be discerned. When we named Rousseau's Confessions an elegiaco-didactic Poem, we meant more than an empty figure of speech; we meant a historical scientific fact.

"Fiction, while the feigner of it knows that he is feigning, partakes, more than we suspect, of the nature of lying; and has ever an, in some degree, unsatisfactory character. All Mythologies were once Philosophies; were believed: the Epic Poems of old time, so long as they continued epic, and had any complete impressiveness, were Histories, and understood to be narratives of facts. In so far as Homer employed his gods as mere ornamental fringes, and had not himself, or at least did not expect his hearers to have, a belief that they were real agents in those antique doings; so far did he fail to be genuine; so far was he a partially hollow and false singer; and sang to please only a portion of man's mind, not the whole thereof.

"Imagination is, after all, but a poor matter when it has to part company with Understanding, and even front it hostilely in flat contradiction. Our mind is divided in twain: there is contest; wherein that which is weaker must needs come to the worse. Now of all feelings, states, principles, call it what you will, in man's mind, is not Belief the clearest, strongest; against which all others contend in vain? Belief is, indeed, the beginning and first condition of all spiritual Force whatsoever; only in so far as Imagination, were it but momentarily, is believed, can there be any use or meaning in it, any enjoyment of it. And what is momentary Belief? The enjoyment of a moment. Whereas a perennial Belief were enjoyment perennially, and with the whole united soul.

"It is thus that I judge of the Supernatural in an Epic Poem; and would say, the instant it has ceased to be authentically supernatural, and become what you call 'Machinery:' sweep it out of sight (*schaff' es mir vom Halse*)! Of a truth, that same 'Machinery,' about which

the critics make such hubbub, was well named Machinery; for it is in very deed mechanical, nowise inspired or poetical. Neither for us is there the smallest æsthetic enjoyment in it; save only in this way; that we believe it to have been believed,—by the Singer or his Hearers; into whose case we now laboriously struggle to transport ourselves; and so, with stinted enough result, catch some reflex of the Reality, which for them was wholly real, and visible face to face. Whenever it has come so far that your 'Machinery' is avowedly mechanical and unbelieving,—what is it else, if we dare tell ourselves the truth, but a miserable, meaningless Deception, kept-up by old use and wont alone? If the gods of an *Iliad* are to us no longer authentic Shapes of Terror, heart-stirring, heart-appalling, but only vague-glittering Shadows,—what must the dead Pagan gods of an *Epigoniad* be, the dead-living Pagan-Christian gods of a *Lusiad*, the concrete-abstract, evangelical-metaphysical gods of a *Paradise Lost*? Superannuated lumber! Cast raiment, at best; in which some poor mime, strutting and swaggering, may or may not set forth new noble Human Feelings (again a Reality), and so secure, or not secure, our pardon of such hoydenish masking; for which, in any case, he has a pardon to ask.

"True enough, none but the earliest Epic Poems can claim this distinction of entire credibility, of Reality: after an *Iliad*, a *Shaster*, a *Koran*, and other the like primitive performances, the rest seem, by this rule of mine, to be altogether excluded from the list. Accordingly, what are all the rest, from Virgil's *Æneid* downwards, in comparison? Frosty, artificial, heterogeneous things; more of gum-flowers than of roses; at the best, of the two mixed incoherently together: to some of which, indeed, it were hard to deny the title of Poems; yet to no one of which can that title belong in any sense even resembling the old high one it, in those old days, conveyed,—when the epithet 'divine' or 'sacred' as applied to the uttered Word of man, was not a vain metaphor, a vain sound, but a real name with meaning. Thus, too, the farther we recede from those early days, when Poetry, as true Poetry is always, was still sacred or divine, and inspired (what ours, in great part, only pretends to be),—the more impossible becomes it to produce any, we say not true Poetry, but tolerable semblance of such; the hollower, in particular, grow all manner of Epics; till at length, as in this generation, the very name of Epic sets men a-yawning, the announcement of a new Epic is received as a public calamity.

"But what if the impossible being once for all quite discarded, the probable be well adhered to: how stands it with fiction then? Why, then, I would say, the evil is much mended, not nowise completely cured. We have then, in place of the wholly dead modern Epic, the partially living modern Novel; to which latter it is much easier to

lend that above-mentioned, so essential 'momentary credence' than to the former: indeed, infinitely easier; for the former being flatly incredible, no mortal can for a moment credit it, for a moment enjoy it. Thus, here and there, a Tom Jones, a Meister, a Crusoe, will yield no little solacement to the minds of men; though still immeasurably less than a Reality would, were the significance thereof as impressively unfolded, were the genius that could so unfold it once given us by the kind Heavens. Neither say thou that proper Realities are wanting: for Man's Life, now, as of old, is the genuine work of God; wherever there is a Man, a God also is revealed, and all that is Godlike: a whole epitome of the Infinite, with its meanings, lies enfolded in the Life of every Man. Only, alas, that the Seer to discern this same Godlike, and with fit utterance unfold it for us, is wanting, and may long be wanting!

"Nay, a question arises on us here, wherein the whole German reading-world will eagerly join: Whether man can any longer be so interested by the spoken Word, as he often was in those primeval days, when rapt away by its inscrutable power, he pronounced it, in such dialect as he had, to be transcendental (to transcend all measure), to be sacred, prophetic and the inspiration of a god? For myself, I (*ich meines Ortes*), by faith or by insight, do heartily understand that the answer to such question will be, Yea! For never that I could in searching find out, has Man been, by Time which devours so much, deprived of any faculty whatsoever that he in any era was possessed of. To my seeming, the babe born yesterday has all the organs of Body, Soul and Spirit, and in exactly the same combination and entireness, that the oldest Pelasgic Greek, or Mesopotamian Patriarch, or Father Adam himself could boast of. Ten fingers, one heart with venous and arterial blood therein, still belong to man that is born of woman: when did he lose any of his spiritual Endowments either; above all, his highest spiritual Endowment, that of revealing Poetic Beauty, and of adequately receiving the same? Not the material, not the susceptibility is wanting; only the Poet, or long series of Poets, to work on these. True, alas too true, the Poet is still utterly wanting, or all but utterly: nevertheless have we not centuries enough before us to produce him in? Him and much else!—I, for the present, will but predict that chiefly by working more and more on Reality, and evolving more and more wisely its inexhaustible meanings; and, in brief, speaking forth in fit utterance whatsoever our whole soul believes, and ceasing to speak forth what thing soever our whole soul does not believe,—will this high emprise be accomplished, or approximated to."

These notable, and not unfounded, though partial and deep-seeing rather than wide-seeing observations on the great import of Reality, considered even as a poetic material, we have inserted the more

willingly, because a transient feeling to the same purpose may often have suggested itself to many readers; and, on the whole, it is good that every reader and every writer understand, with all intensity of conviction, what quite infinite worth lies in Truth: how all-pervading, omnipotent, in man's mind, is the thing we name Belief. For the rest, Herr Sauerteig, though one-sided, on this matter of Reality, seems heartily persuaded, and is not perhaps so ignorant as he looks. It cannot be unknown to him, for example, what noise is made about "Invention;" what a supreme rank this faculty is reckoned to hold in the poetic endowment. Great truly is Invention: nevertheless, that is but a poor exercise of it with which Belief is not concerned. "An Irishman with whisky in his head," as poor Byron said, will invent you, in this kind, till there is enough and to spare. Nay, perhaps, if we consider well, the highest exercise of Invention has, in very deed, nothing to do with Fiction; but is an invention of new Truth, what we can call a Revelation; which last does undoubtedly transcend all other poetic efforts, nor can Herr Sauerteig be too loud in its praises. But, on the other hand, whether such effort is still possible for man, Herr Sauerteig and the bulk of the world are probably at issue!—and will probably continue so till that same "Revelation," or new "Invention of Reality," of the sort he desiderates, shall itself make its appearance.

Meanwhile, quitting these airy regions, let any one bethink him how impressive the smallest historical fact may become, as contrasted with the grandest fictitious event; what an incalculable force lies for us in this consideration: The Thing which I here hold imaged in my mind did actually occur; was, in very truth, an element in the system of the All, whereof I too form part; had therefore, and has, through all time, an authentic being; is not a dream, but a reality! We ourselves can remember reading, in Lord Clarendon, with feelings perhaps somehow accidentally opened to it,—certainly with a depth of impression strange to us then and now,—that insignificant-looking passage, where Charles, after the battle of Worcester, glides down, with Squire Careless, from the Royal Oak, at nightfall, being hungry: how, "making a shift to get over hedges and ditches, after walking at least eight or nine miles, which were the more grievous to the King by the weight of his boots (for he could not put them off when he cut off his hair, for want of shoes), before morning they came to a poor cottage, the owner whereof, being a Roman Catholic, was known to Careless." How this poor drudge, being knocked-up from his snoring, "carried them into a little barn full of hay, which was a better lodging than he had for himself;" and by and by, not without difficulty, brought his Majesty "a piece of bread and a great pot of buttermilk," saying candidly that "he himself lived by his daily labor, and that what he had brought him was the fare he and

his wife had:" on which nourishing diet his Majesty, "staying upon the haymow," feeds thankfully for two days; and then departs, under new guidance, having first changed clothes, down to the very shirt and "old pair of shoes," with his landlord; and so, as worthy Bunyan has it, "goes on his way, and sees him no more." Singular enough, if we will think of it! This, then, was a genuine flesh-and-blood Rustic of the year 1651: he did actually swallow bread and buttermilk (not having ale and bacon), and do field-labor: with these hobnailed "shoes" has sprawled through mud-roads in winter, and, jocund or not, driven his team a-field in summer: he made bargains; had chafferings and higgings, now a sore heart, now a glad one; was born; was a son, was a father; toiled in many ways, being forced to it, till the strength was all worn out of him; and then—lay down "to rest his galled back," and sleep there till the long-distant morning!—How comes it, that he alone of all the British rustics who tilled and lived along with him, on whom the blessed sun on that same "fifth day of September" was shining, should have chanced to rise on us; that this poor pair of clouted Shoes, out of the million million hides that have been tanned, and cut, and worn, should still subsist, and hang visibly together? We see him but for a moment; for one moment. the blanket of the Night is rent asunder, so that we behold and see, and then closes over him—forever.

So too, in some Boswell's Life of Johnson, how indelible and magically bright does many a little Reality dwell in our remembrance! There is no need that the personages on the scene be a King and Clown; that the scene be the Forest of the Royal Oak, "on the borders of Staffordshire;" need only that the scene lie on this old firm Earth of ours, where we also have so surprisingly arrived; that the personages be men, and seen with the eyes of a man. Foolish enough, how some slight, perhaps mean and even ugly incident, if real and well presented, will fix itself in a susceptible memory, and lie ennobled there; silvered over with the pale cast of thought, with the pathos which belongs only to the Dead. For the Past is all holy to us; the Dead are all holy, even they that were base and wicked while alive. Their baseness and wickedness was not They, was but the heavy and unmanageable Environment that lay round them, with which they fought unprevailing: they (the ethereal god-given Force that dwelt in them, and was their Self) have now shuffled-off that heavy Environment, and are free and pure: their life-long Battle, go how it might, is all ended, with many wounds or with fewer; they have been recalled from it, and the once harsh-jarring battle-field has become a silent awe-inspiring Golgotha, and *Gottesacker* (Field of God)!—Boswell relates this in itself smallest and poorest of occurrences: "As we walked along the Strand to-night, arm in arm, a woman of the town accosted us in the usual enticing

manner. 'No, no, my girl,' said Johnson; 'it won't do.' He, however, did not treat her with harshness; and we talked of the wretched life of such women." Strange power of Reality! Not even this poorest of occurrences, but now, after seventy years are come and gone, has a meaning for us. Do but consider that it is true; that it did in very deed occur! That unhappy Outcast, with all her sins and woes, her lawless desires, too complex mischances, her wailings and her riotings, has departed utterly; alas! her siren finery has got all besmudged, ground, generations since, into dust and smoke; of her degraded body, and whole miserable earthly existence, all is away: she is no longer here, but far from us, in the bosom of Eternity,—whence we too came, whither we too are bound! Johnson said, "No, no, my girl; it won't do;" and then "we talked;"—and herewith the wretched one, seen but for the twinkling of an eye, passes on into the utter Darkness. No high Calista, that ever issued from Story-teller's brain, will impress us more deeply than this meanest of the mean; and for a good reason: That she issued from the Maker of Men.

It is well worth the Artist's while to examine for himself what it is that gives such pitiable incidents their memorableness; his aim likewise is, above all things, to be memorable. Half the effect, we already perceive, depends on the object; on its being real, on its being really seen. The other half will depend on the observer; and the question now is: How are real objects to be so seen; on what quality of observing, or of style in describing, does this so intense pictorial power depend? Often a slight circumstance contributes curiously to the result: some little, and perhaps to appearance accidental, feature is presented; a light-gleam, which instantaneously excites the mind, and urges it to complete the picture, and evolve the meaning thereof for itself. By critics, such light-gleams and their almost magical influence have frequently been noted: but the power to produce such, to select such features as will produce them, is generally treated as a knack, or trick of the trade, a secret for being "graphic;" whereas these magical feats are, in truth, rather inspirations; and the gift of performing them, which acts unconsciously, without forethought, and as if by nature alone, is properly a genius for description.

One grand, invaluable secret there is, however, which includes all the rest, and, what is comfortable, lies clearly in every man's power: To have an open loving heart, and what follows from the possession of such. Truly, it has been said, emphatically in these days ought it to be repeated: A loving Heart is the beginning of all Knowledge. This it is that opens the whole mind, quickens every faculty of the intellect to do its fit work, that of knowing; and therefrom, by sure consequence, of vividly uttering-forth. Other secret for being

"graphic" is there none, worth having: but this is an all-sufficient one. See, for example, what a small Boswell can do! Hereby, indeed, is the whole man made a living mirror, wherein the wonders of this ever-wonderful Universe are, in their true light (which is ever a magical, miraculous one) represented, and reflected back on us. It has been said, "the heart sees farther than the head:" but, indeed, without the seeing heart, there is no true seeing for the head so much as possible; all is mere oversight, hallucination and vain superficial phantasmagoria, which can permanently profit no one.

Here, too, may we not pause for an instant, and make a practical reflection? Considering the multitude of mortals that handle the Pen in these days, and can mostly spell, and write without glaring violations of grammar, the question naturally arises: How is it, then, that no Work proceeds from them, bearing any stamp of authenticity and permanence; of worth for more than one day? Ship-loads of Fashionable Novels, Sentimental Rhymes, Tragedies, Farces, Diaries of Travel, Tales by flood and field, are swallowed monthly into the bottomless Pool: still does the Press toil; innumerable Paper-makers, Compositors, Printers' Devils, Book-binders, and Hawkers grown hoarse with loud proclaiming, rest not from their labor; and still, in torrents, rushes on the great array of Publications, unpausing, to their final home; and still Oblivion, like the Grave, cries, Give! Give! How is it that of all these countless multitudes, no one can attain to the smallest mark of excellence, or produce aught that shall endure longer than "snow-flake on the river," or the foam of penny-beer? We answer: Because they are foam; because there is no Reality in them. These Three Thousand men, women and children, that make up the army of British Authors, do not, if we will well consider it, see anything whatever; consequently have nothing that they can record and utter, only more or fewer things that they can plausibly pretend to record. The Universe, of Man and Nature, is still quite shut-up from them; the "open secret" still utterly a secret; because no sympathy with Man or Nature, no love and free simplicity of heart has yet unfolded the same. Nothing but a pitiful Image of their own pitiful Self, with its vanities, and grudgings, and ravenous hunger of all kinds, hangs forever painted in the retina of these unfortunate persons; so that the starry All, with whatsoever it embraces, does but appear as some expanded magic-lantern shadow of that same Image,—and naturally looks pitiful enough.

It is vain for these persons to allege that they are naturally without gift, naturally stupid and sightless, and so can attain to no knowledge of anything; therefore, in writing of anything, must needs write falsehoods of it, there being in it no truth for them. Not so, good Friends. The stupidest of you has a certain faculty; were it

but that of articulate speech (say, in the Scottish, the Irish, the Cockney dialect, or even in "Governess-English"), and of physically discerning what lies under your nose. The stupidest of you would perhaps grudge to be compared in faculty with James Boswell; yet see what he has produced! You do not use your faculty honestly; your heart is shut up; full of greediness, malice, discontent; so your intellectual sense cannot be open. It is vain also to urge that James Boswell had opportunities; saw great men and great things, such as you can never hope to look on. What make ye of Parson White in Selborne? He had not only no great men to look on, but not even men; merely sparrows and cock-chafers: yet has he left us a Biography of these; which, under its title Natural History of Selborne, still remains valuable to us; which has copied a little sentence or two faithfully from the Inspired Volume of Nature, and so is itself not without inspiration. Go ye and do likewise. Sweep away utterly all frothiness and falsehood from your heart; struggle unwearyingly to acquire, what is possible for every god-created Man, a free, open, humble soul: speak not at all, in any wise, till you have somewhat to speak; care not for the reward of your speaking, but simply and with undivided mind for the truth of your speaking: then be placed in what section of Space and of Time soever, do but open your eyes, and they shall actually see, and bring you real knowledge, wondrous, worthy of belief; and instead of one Boswell and one White, the world will rejoice in a thousand,—stationed on their thousand several watch-towers, to instruct us by indubitable documents, of whatsoever in our so stupendous World comes to light and is! O, had the Editor of this Magazine but a magic rod to turn all that not inconsiderable Intellect, which now deluges us with artificial fictitious soap-lather, and mere Lying, into the faithful study of Reality,—what knowledge of great, everlasting Nature, and of Man's ways and doings therein, would not every year bring us in! Can we but change one single soap-latherer and mountebank Juggler, into a true Thinker and Doer, who even tries honestly to think and do,—great will be our reward.

But to return; or rather from this point to begin our journey! If now, what with Herr Sauerteig's *Springwurzeln*, what with so much lucubration of our own, it have become apparent how deep, immeasurable is the "worth that lies in Reality," and farther, how exclusive the interest which man takes in Histories of Man,—may it not seem lamentable, that so few genuinely good Biographies have yet been accumulated in Literature; that in the whole world, one cannot find, going strictly to work, above some dozen, or baker's dozen, and those chiefly of very ancient date? Lamentable; yet, after what we have just seen, accountable. Another question might be asked: How comes it that in England we have simply one good

Biography, this Boswell's Johnson; and of good, indifferent, or even bad attempts at Biography, fewer than any civilized people? Consider the French and Germans, with their Moreris, Bayles, Jördenses, Jörchers, their innumerable *Mémoires*, and *Schilderungen*, and *Biographies Universelles*; not to speak of Rousseaus, Goethes, Schubarts, Jung-Stillings: and then contrast with these our poor Birches and Kippises and Pecks; the whole breed of whom, moreover, is now extinct!

With this question, as the answer might lead us far, and come out unflattering to patriotic sentiment, we shall not intermeddle; but turn rather, with great pleasure, to the fact, that one excellent Biography is actually English;—and even now lies, in Five new Volumes, at our hand, soliciting a new consideration from us; such as, age after age (the Perennial showing ever new phases as our position alters), it may long be profitable to bestow on it;—to which task we here, in this position, in this age, gladly address ourselves.

First, however, let the foolish April-fool Days pass by; and our Reader, during these twenty-nine days of uncertain weather that will follow, keep pondering, according to convenience, the purport of Biography in general: then, with the blessed dew of May-day, and in unlimited convenience of space, shall all that we have written on Johnson and Boswell's Johnson and Croker's Boswell's Johnson be faithfully laid before him.

TWO HISTORICAL ESSAYS

By

LORD MACAULAY

(Thomas Macaulay, English historian and statesman, was born at Rothley Temple, Leicestershire, in 1800, the son of Zachary Macaulay. He was educated at Craven University and graduated as B.A. in 1822. Macaulay was a Whig and leader of slavery abolitionists. He twice won the Chancellor's medal for poems at Cambridge, and in 1826 he was called to the Bar. In 1832 he was secretary to the Board of Control and from 1838 he was legal adviser to the Supreme Council of India. After this position he became Secretary of War. His "Lays of Ancient Rome" appeared in 1842, followed by his famous "Essays", in 1843. One of his great traits and powers was the giving of personality to history characters. He died 1859.)

FREDERIC THE GREAT

(April 1842)

THIS work, which has the high honour of being introduced to the world by the author of *Lochiel* and *Hohenlinden*, is not wholly unworthy of so distinguished a chaperon. It professes, indeed, to be no more than a compilation; but it is an exceedingly amusing compilation, and we shall be glad to have more of it. The narrative comes down at present only to the commencement of the Seven Years' War, and therefore does not comprise the most interesting portion of Frederic's reign.

It may not be unacceptable to our readers that we should take this opportunity of presenting them with a slight sketch of the life of the greatest king that has, in modern times, succeeded by right of birth to a throne. It may, we fear, be impossible to compress so long and eventful a story within the limits which we must prescribe to ourselves. Should we be compelled to break off, we may perhaps, when the continuation of this work appears, return to the subject.

The Prussian monarchy, the youngest of the great European states, but in population and revenue the fifth among them, and in art, science, and civilisation entitled to the third, if not to the second place, sprang from a humble origin. About the beginning of the fifteenth century, the marquisate of Brandenburg was bestowed by the Emperor Sigismund on the noble family of Hohenzollern. In the

sixteenth century that family embraced the Lutheran doctrines. It obtained from the King of Poland, early in the seventeenth century the investiture of the duchy of Prussia. Even after this accession of territory, the chiefs of the house of Hohenzollern hardly ranked with the Electors of Saxony and Bavaria. The soil of Brandenburg was for the most part sterile. Even round Berlin, the capital of the province, and round Potsdam, the favourite residence of the Margraves, the country was a desert. In some places, the deep sand could with difficulty be forced by assiduous tillage to yield thin crops of rye and oats. In other places, the ancient forests, from which the conquerors of the Roman Empire had descended on the Danube, remained untouched by the hand of man. Where the soil was rich it was generally marshy, and its insalubrity repelled the cultivators whom its fertility attracted. Frederic William, called the Great Elector, was the prince to whose policy his successors have agreed to ascribe their greatness. He acquired by the peace of Westphalia several valuable possessions, and among them the rich city and district of Magdeburg; and he left to his son Frederic a principality as considerable as any which was not called a kingdom.

Frederic aspired to the style of royalty. Ostentatious and profuse, negligent of his true interests and of his high duties, insatiably eager for frivolous distinctions, he added nothing to the real weight of the state which he governed; perhaps he transmitted his inheritance to his children impaired rather than augmented in value; but he succeeded in gaining the great object of his life, the title of King. In the year 1700 he assumed this new dignity. He had on that occasion to undergo all the mortifications which fall to the lot of ambitious upstarts. Compared with the other crowned heads of Europe, he made a figure resembling that which a Nabob or a Commissary, who had bought a title, would make in the Company of Peers whose ancestors had been attainted for treason against the Plantagenets. The envy of the class which Frederic quitted, and the civil scorn of the class into which he intruded himself, were marked in very significant ways. The Elector of Saxony at first refused to acknowledge the new Majesty. Lewis the Fourteenth looked down on his brother King with an air not unlike that with which the Count in Molière's play regards Monsieur Jourdain, just fresh from the mummerly of being made a gentleman. Austria exacted large sacrifices in return for her recognition, and at last gave it ungraciously.

Frederic was succeeded by his son, Frederic William, a prince who must be allowed to have possessed some talents for administration, but whose character was disfigured by odious vices, and whose eccentricities were such as had never before been seen out of a mad-house. He was exact and diligent in the transacting of business; and he was the first who formed the design of obtaining for Prussia a

place among the European powers, altogether out of proportion to her extent and population, by means of a strong military organisation. Strict economy enabled him to keep up a peace establishment of sixty thousand troops. These troops were disciplined in such a manner, that, placed beside them, the household regiments of Versailles and St. James's would have appeared an awkward squad. The master of such a force could not but be regarded by all his neighbours as a formidable enemy and a valuable ally.

But the mind of Frederic William was so ill regulated, that all his inclinations became passions, and all his passions partook of the character of moral and intellectual disease. His parsimony degenerated into sordid avarice. His taste for military pomp and order became a mania, like that of a Dutch burgomaster for tulips, or that of a member of the Roxburghe Club for Caxtons. While the envoys of the Court of Berlin were in a state of such squalid poverty as moved the laughter of foreign capitals, while the food placed before the princes and princesses of the blood-royal of Prussia was too scanty to appease hunger, and so bad that even hunger loathed it, no price was thought too extravagant for tall recruits. The ambition of the King was to form a brigade of giants, and every country was ransacked by his agents for men above the ordinary stature. These researches were not confined to Europe. No head that towered above the crowd in the bazaars of Aleppo, of Cairo, or of Surat, could escape the crimps of Frederic William. One Irishman more than seven feet high, who was picked up in London by the Prussian ambassador, received a bounty of near thirteen hundred pounds sterling, very much more than the ambassador's salary. This extravagance was the more absurd, because a stout youth of five feet eight, who might have been procured for a few dollars, would in all probability have been a much more valuable soldier. But to Frederic William, this huge Irishman was what a brass Otho, or a Vinegar Bible, is to a collector of a different kind.

It is remarkable, that though the main end of Frederic William's administration was to have a great military force, though his reign forms an important epoch in the history of military discipline, and though his dominant passion was the love of military display, he was yet one of the most pacific of princes. We are afraid that his aversion to war was not the effect of humanity, but was merely one of his thousand whims. His feeling about his troops seems to have resembled a miser's feeling about his money. He loved to collect them, to count them, to see them increase; but he could not find it in his heart to break in upon the precious hoard. He looked forward to some future time when his Patagonian battalions were to drive hostile infantry before them like sheep; but this future time was always receding; and it is probable that, if his life had been pro-

longed thirty years, his superb army would never have seen any harder service than a sham fight in the fields near Berlin. But the great military means which he had collected were destined to be employed by a spirit far more daring and inventive than his own.

Frederic, surnamed the Great, son of Frederic William, was born in January 1712. It may safely be pronounced that he had received from nature a strong and sharp understanding, and a rare firmness of temper and intensity of will. As to the other parts of his character, it is difficult to say whether they are to be ascribed to nature, or to the strange training which he underwent. The history of his boyhood is painfully interesting. Oliver Twist in the parish workhouse, SMike at Dotheboys Hall, were petted children when compared with this heir apparent of a crown. The nature of Frederic William was hard and bad, and the habit of exercising arbitrary power had made him frightfully savage. His rage constantly vented itself to right and left in curses and blows. When his Majesty took a walk, every human being fled before him, as if a tiger had broken loose from a menagerie. If he met a lady in the street, he gave her a kick, and told her to go home and mind her brats. If he saw a clergyman staring at the soldiers, he admonished the reverend gentleman to be take himself to study and prayer, and enforced this pious advice by a sound caning, administered on the spot. But it was in his own house that he was most unreasonable and ferocious. His palace was hell, and he the most execrable of fiends, a cross between Moloch and Puck. His son Frederic and his daughter Wilhelmina, afterwards Margravine of Bareuth, were in an especial manner objects of his aversion. His own mind was uncultivated. He despised literature. He hated infidels, papists, and metaphysicians, and did not very well understand in what they differed from each other. The business of life, according to him, was to drill and to be drilled. The recreations suited to a prince, were to sit in a cloud of tobacco smoke, to sip Swedish beer between the puffs of the pipe, to play backgammon for three halfpence a rubber, to kill wild hogs, and to shoot partridges by the thousand. The Prince Royal showed little inclination either for the serious employments or for the amusements of his father. He shirked the duties of the parade; he detested the fume of tobacco; he had no taste either for backgammon or for field sports. He had an exquisite ear, and performed skilfully on the flute. His earliest instructors had been French refugees, and they had awakened in him a strong passion for French literature and French society. Frederic William regarded these tastes as effeminate and contemptible, and, by abuse and persecution, made them still stronger. Things became worse when the Prince Royal attained that time of life at which the great revolution in the human mind and body takes place. He was guilty of some youthful indiscretions, which no good and wise

parent would regard with severity. At a later period he was accused, truly or falsely, of vices from which History averts her eyes, and which even Satire blushes to name, vices such that, to borrow the energetic language of Lord Keeper Coventry, "the depraved nature of man, which of itself carrieth man to all other sin, abhorreth them." But the offences of his youth were not characterised by any peculiar turpitude. They excited, however, transports of rage in the King, who hated all faults except those to which he was himself inclined, and who conceived that he made ample atonement to Heaven for his brutality, by holding the softer passions in detestation. The Prince Royal, too, was not one of those who are content to take their religion on trust. He asked puzzling questions, and brought forward arguments which seemed to savour of something different from pure Lutheranism. The King suspected that his son was inclined to be a heretic of some sort or other, whether Calvinist or Atheist his Majesty did not very well know. The ordinary malignity of Frederic William was bad enough. He now thought malignity a part of his duty as a Christian man, and all the conscience that he had stimulated his hatred. The flute was broken: the French books were sent out of the palace: the Prince was kicked and cudgelled, and pulled by the hair. At dinner the plates were hurled at his head: sometimes he was restricted to bread and water: sometimes he was forced to swallow food so nauseous that he could not keep it on his stomach. Once his father knocked him down, dragged him along the floor to a window, and was with difficulty prevented from strangling him with the cord of the curtain. The Queen, for the crime of not wishing to see her son murdered, was subjected to the grossest indignities. The Princess Wilhelmina, who took her brother's part, was treated almost as ill as Mrs. Brownrigg's apprentices. Driven to despair, the unhappy youth tried to run away. Then the fury of the old tyrant rose to madness. The Prince was an officer in the army: his flight was therefore desertion; and, in the moral code of Frederic William, desertion was the highest of all crimes. "Desertion," says this royal theologian, in one of his half-crazy letters, "is from hell. It is a work of the children of the Devil. No child of God could possibly be guilty of it." An accomplice of the Prince, in spite of the recommendation of a court martial, was mercilessly put to death. It seemed probable that the Prince himself would suffer the same fate. It was with difficulty that the intercession of the States of Holland, of the Kings of Sweden and Poland, and of the Emperor of Germany, saved the House of Brandenburg from the stain of an unnatural murder. After months of cruel suspense, Frederic learned that his life would be spared. He remained, however, long a prisoner; but he was not on that account to be pitied. He found in his gaolers a tenderness which he had never found in his father; his table was

not sumptuous, but he had wholesome food in sufficient quantity to appease hunger: he could read the *Henriade* without being kicked, and could play on his flute without having it broken over his head.

When his confinement terminated he was a man. He had nearly completed his twenty-first year, and could scarcely be kept much longer under the restraints which had made his boyhood miserable. Suffering had matured his understanding, while it had hardened his heart and soured his temper. He had learnt self-command and dissimulation; he affected to conform to some of his father's views, and submissively accepted a wife, who was a wife only in name, from his father's hand. He also served with credit, though without any opportunity of acquiring brilliant distinction, under the command of Prince Eugene, during a campaign marked by no extraordinary events. He was now permitted to keep a separate establishment, and was therefore able to indulge with caution his own tastes. Partly in order to conciliate the King, and partly, no doubt, from inclination, he gave up a portion of his time to military and political business, and thus gradually acquired such an aptitude for affairs as his most intimate associates were not aware that he possessed.

His favourite abode was at Rheinsberg, near the frontier which separates the Prussian dominions from the Duchy of Mecklenburg. Rheinsberg is a fertile and smiling spot, in the midst of the sandy waste of the Marquisate. The mansion, surrounded by woods of oak and beech, looks out upon a spacious lake. There Frederic amused himself by laying out gardens in regular alleys and intricate mazes, by building obelisks, temples and conservatories, and by collecting rare fruits and flowers. His retirement was enlivened by a few companions, among whom he seems to have preferred those who, by birth or extraction, were French. With these intimates he dined and supped well, drank freely, and amused himself sometimes with concerts, and sometimes with holding chapters of a fraternity which he called the Order of Bayard; but literature was his chief resource.

His education has been entirely French. The long ascendancy which Lewis the Fourteenth had enjoyed, and the eminent merit of the tragic and comic dramatists, of the satirists, and of the preachers who had flourished under that magnificent prince, had made the French language predominant in Europe. Even in countries which had a national literature, and which could boast of names greater than those of Racine, of Molière, and of Massillon, in the country of Dante, in the country of Cervantes, in the country of Shakspeare and Milton, the intellectual fashions of Paris had been to a great extent adopted. Germany had not yet produced a single masterpiece of poetry or eloquence. In Germany, therefore, the French taste reigned without rival and without limit. Every youth of rank was taught to speak and write French. That he should speak and

wrote his own tongue with politeness, or even with accuracy and facility, was regarded as comparatively an unimportant object. Even Frederic William, with all his rugged Saxon prejudices, thought it necessary that his children should know French, and quite unnecessary that they should be well versed in German. The Latin was positively interdicted. "My son," his Majesty wrote, "shall not learn Latin; and, more than that, I will not suffer anybody even to mention such a thing to me." One of the preceptors ventured to read the *Golden Bull* in the original with the Prince Royal. Frederic William entered the room, and broke out in his usual kingly style.

"Rascal, what are you at there?"

"Please your Majesty," answered the preceptor, "I was explaining the *Golden Bull* to his Royal Highness."

"I'll Golden Bull you, you rascal!" roared the Majesty of Prussia. Up went the King's cane; away ran the terrified instructor; and Frederic's classical studies ended for ever. He now and then affected to quote Latin sentences, and produced such exquisitely Ciceronian phrases as these:—"Stante pede morire,"—"De gustibus non est disputandus,"—"Tot verbas tot spondera." Of Italian, he had not enough to read a page of Metastasio with ease; and of the Spanish and English, he did not, as far as we are aware, understand a single word.

As the highest human compositions to which he had access were those of the French writers, it is not strange that his admiration for those writers should have been unbounded. His ambitious and eager temper early prompted him to imitate what he admired. The wish, perhaps, dearest to his heart was, that he might rank among the masters of French rhetoric and poetry. He wrote prose and verse as indefatigably as if he had been a starving hack of Cave or Osborn; but Nature, which had bestowed on him, in a large measure, the talents of a captain and of an administrator, had withheld from him those higher and rarer gifts, without which industry labours in vain to produce immortal eloquence and song. And, indeed, had he been blessed with more imagination, wit, and fertility of thought, than he appears to have had, he would still have been subject to one great disadvantage, which would, in all probability, have for ever prevented him from taking a high place among men of letters. He had not the full command of any language. There was no machine of thought which he could employ with perfect ease, confidence, and freedom. He had German enough to scold his servants, or to give the word of command to his grenadiers; but his grammar and pronunciation were extremely bad. He found it difficult to make out the meaning even of the simplest German poetry. On one occasion a version of Racine's *Iphigénie* was read to him. He held the French original in his hand; but was forced to own that, even with such help, he could not under-

stand the translation. Yet, though he had neglected his mother tongue in order to bestow all his attention on French, his French was, after all, the French of a foreigner. It was necessary for him to have always at his beck some men of letters from Paris to point out the solecisms and false rhymes of which, to the last, he was frequently guilty. Even had he possessed the poetic faculty, of which, as far as we can judge, he was utterly destitute, the want of a language would have prevented him from being a great poet. No noble work of imagination, as far as we recollect, was ever composed by any man, except in a dialect which he had learned without remembering how or when, and which he had spoken with perfect ease before he had ever analysed its structure. Romans of great abilities wrote Greek verses; but how many of those verses have deserved to live? Many men of eminent genius have, in modern times, written Latin poems; but, as far as we are aware, none of those poems, not even Milton's, can be ranked in the first class of art, or even very high in the second. It is not strange, therefore, that, in the French verses of Frederic, we can find nothing beyond the reach of any man of good parts and industry, nothing above the level of Newdigate and Seatonian poetry. His best pieces may perhaps rank with the worst in Dodsley's collection. In history, he succeeded better. We do not, indeed, find, in any of his voluminous *Memoirs*, either deep reflection or vivid painting. But the narrative is distinguished by clearness, conciseness, good sense, and a certain air of truth and simplicity, which is singularly graceful in a man who, having done great things, sits down to relate them. On the whole, however, none of his writings are so agreeable to us as his *Letters*, particularly those which are written with earnestness, and are not embroidered with verses.

It is not strange that a young man devoted to literature, and acquainted only with the literature of France, should have looked with profound veneration on the genius of Voltaire. "A man who has never seen the sun," says Calderon, in one of his charming comedies, "cannot be blamed for thinking that no glory can exceed that of the moon. A man who has seen neither moon nor sun, cannot be blamed for talking of the unrivalled brightness of the morning star." Had Frederic been able to read Homer and Milton or even Virgil and Tasso, his admiration of the *Henriade* would prove that he was utterly destitute of the power of discerning what is excellent in art. Had he been familiar with Sophocles or Shakespeare, we should have expected him to appreciate *Zaire* more justly. Had he been able to study Thucydides and Tacitus in the original Greek and Latin, he would have known that there were heights in the eloquence of history far beyond the reach of the author of the *Life of Charles the Twelfth*. But the finest heroic poem, several of the most powerful

tragedies, and the most brilliant and picturesque historical work that Frederic had ever read, were Voltaire's. Such high and various excellence moved the young Prince almost to adoration. The opinions of Voltaire on religious and philosophical questions had not yet been fully exhibited to the public. At a later period, when an exile from his country, and at open war with the Church, he spoke out. But when Frederic was at Rheinsberg, Voltaire was still a courtier; and, though he could not always curb his petulant wit, he had as yet published nothing that could exclude him from Versailles, and little that a divine of the mild and generous school of Grotius and Tillotson might not read with pleasure. In the *Henriade*, in *Zaire*, and in *Alzire*, Christian piety is exhibited in the most amiable form; and, some years after the period of which we are writing, a Pope condescended to accept the dedication of *Mahomet*. The real sentiments of the poet, however, might be clearly perceived by a keen eye through the decent disguise with which he veiled them, and could not escape the sagacity of Frederic, who held similar opinions, and had been accustomed to practise similar dissimulation.

The Prince wrote to his idol in the style of a worshipper; and Voltaire replied with exquisite grace and address. A correspondence followed, which may be studied with advantage by those who wish to become proficient in the ignoble art of flattery. No man ever paid compliments better than Voltaire. His sweetest confectionery had always a delicate, yet stimulating flavour, which was delightful to palates wearied by the coarse preparations of inferior artists. It was only from his hand that so much sugar could be swallowed without making the swallower sick. Copies of verses, writing-desks, trinkets of amber, were exchanged between the friends. Frederic confided his writings to Voltaire; and Voltaire applauded, as if Frederic had been Racine and Bossuet in one. One of his Royal Highness's performances was a refutation of Machiavelli. Voltaire undertook to convey it to the press. It was entitled the *Anti-Machiavel*, and was an edifying homily against rapacity, perfidy, arbitrary government, unjust war, in short, against almost everything for which its author is now remembered among men.

The old King uttered now and then a ferocious growl at the diversions of Rheinsberg. But his health was broken; his end was approaching; and his vigour was impaired. He had only one pleasure left, that of seeing tall soldiers. He could always be propitiated by a present of a grenadier of six feet four or six feet five; and such presents were from time to time judiciously offered by his son.

Early in the year 1740, Frederic William met death with a firmness and dignity worthy of a better and wiser man; and Frederic, who had just completed his twenty-eighth year, became King of Prussia. His character was little understood. That he had good

abilities, indeed, no person who had talked with him, or corresponded with him, could doubt. But the easy Epicurean life which he had led, his love of good cookery and good wine, of music, of conversation, of light literature, led many to regard him as a sensual and intellectual voluptuary. His habit of canting about moderation, peace, liberty, and the happiness which a good mind derives from the happiness of others, had imposed on some who should have known better. Those who thought best of him, expected a Telemachus after Fénelon's pattern. Others predicted the approach of a Medicean age, an age propitious to learning and art, and not unpropitious to pleasure. Nobody had the least suspicion that a tyrant of extraordinary military and political talents, of industry more extraordinary still, without fear, without faith, and without mercy, had ascended the throne.

The disappointment of Falstaff at his old boon-companion's coronation was not more bitter than that which awaited some of the inmates of Rheinsberg. They had long looked forward to the accession of their patron, as to the event from which their own prosperity and greatness was to date. They had at last reached the promised land, the land which they had figured to themselves as flowing with milk and honey; and they found it a desert. "No more of these fooleries," was the short, sharp admonition given by Frederic to one of them. It soon became plain that, in the most important points, the new sovereign bore a strong family likeness to his predecessor. There was indeed a wide difference between the father and the son as respected extent and vigour of intellect, speculative opinions, amusements, studies, outward demeanour. But the groundwork of the character was the same in both. To both were common the love of order, the love of business, the military taste, the parsimony, the imperious spirit, the temper irritable even to ferocity, the pleasure in the pain and humiliation of others. But these propensities had in Frederic William partaken of the general unsoundness of his mind, and wore a very different aspect when found in company with the strong and cultivated understanding of his successor. Thus, for example, Frederic was as anxious as any prince could be about the efficiency of his army. But this anxiety never degenerated into a monomania, like that which led his father to pay fancy prices for giants. Frederic was as thrifty about money as any prince or any private man ought to be. But he did not conceive, like his father, that it was worth while to eat unwholesome cabbages for the purpose of saving four or five dollars in the year. Frederic was, we fear, as malevolent as his father; but Frederic's wit enabled him often to show his malevolence in ways more decent than those to which his father resorted, and to inflict misery and degradation by a taunt instead of a blow. Frederic, it is true, by no means relinquished his hereditary privilege of kicking and cudgelling. His practice, however,

as to that matter, differed in some important respects from his father's. To Frederic William, the mere circumstance that any persons whatever, men, women, or children, Prussians or foreigners, were within reach of his toes and of his cane, appeared to be a sufficient reason for proceeding to belabour them. Frederic required provocation as well as vicinity; nor was he ever known to inflict this paternal species of correction on any but his born subjects; though on one occasion M. Thiébault had reason, during a few seconds, to anticipate the high honour of being an exception to this general rule.

The character of Frederic was still very imperfectly understood either by his subjects or by his neighbours, when events occurred which exhibited it in a strong light. A few months after his accession died Charles the Sixth, Emperor of Germany, the last descendant, in the male line, of the House of Austria.

Charles left no son, and had, long before his death, relinquished all hopes of male issue. During the latter part of his life, his principal object had been to secure to his descendants in the female line the many crowns of the House of Hapsburg. With this view, he had promulgated a new law of succession, widely celebrated throughout Europe under the name of Pragmatic Sanction. By virtue of this law, his daughter, the Archduchess Maria Theresa, wife of Francis of Lorraine, succeeded to the dominions of her ancestors.

No sovereign has ever taken possession of a throne by a clearer title. All the politics of the Austrian cabinet had, during twenty years, been directed to one single end, the settlement of the succession. From every person whose rights could be considered as injuriously affected, renunciations in the most solemn form had been obtained. The new law had been ratified by the Estates of all the kingdoms and principalities which made up the great Austrian monarchy. England, France, Spain, Russia, Poland, Prussia, Sweden, Denmark, the Germanic body, had bound themselves by treaty to maintain the Pragmatic Sanction. That instrument was placed under the protection of the public faith of the whole civilised world.

Even if no positive stipulations on this subject had existed, the arrangement was one which no good man would have been willing to disturb. It was a peaceable arrangement. It was an arrangement acceptable to the great population whose happiness was chiefly concerned. It was an arrangement which made no charge in the distribution of power among the states of Christendom. It was an arrangement which could be set aside only by means of a general war; and, if it were set aside, the effect would be, that the equilibrium of Europe would be deranged, that the loyal and patriotic feelings of millions would be cruelly outraged, and that great provinces which

had been united for centuries would be torn from each other by main force.

The sovereigns of Europe were, therefore, bound by every obligation which those who are intrusted with power over their fellow-creatures ought to hold most sacred, to respect and defend the rights of the Archduchess. Her situation and her personal qualities were such as might be expected to move the mind of any generous man to pity, admiration, and chivalrous tenderness. She was in her twenty-fourth year. Her form was majestic, her features beautiful, her countenance sweet and animated, her voice musical, her deportment gracious and dignified. In all domestic relations she was without reproach. She was married to a husband whom she loved, and was on the point of giving birth to a child, when death deprived her of her father. The loss of a parent, and the new cares of empire, were too much for her in the delicate state of her health. Her spirits were depressed, and her cheek lost its bloom. Yet it seemed that she had little cause for anxiety. It seemed that justice, humanity, and the faith of treaties would have their due weight, and that the settlement so solemnly guaranteed would be quietly carried into effect. England, Russia, Poland, and Holland, declared in form their intention to adhere to their engagements. The French ministers made a verbal declaration to the same effect. But from no quarter did the young Queen of Hungary receive stronger assurances of friendship and support than from the King of Prussia.

Yet the King of Prussia, the Anti-Machiavel, had already fully determined to commit the great crime of violating his plighted faith, of robbing the ally whom he was bound to defend, and of plunging all Europe into a long, bloody, and desolating war; and all this for no end whatever, except that he might extend his dominions, and see his name in the gazettes. He determined to assemble a great army with speed and secrecy, to invade Silesia before Maria Theresa should be apprised of his design, and to add that rich province to his kingdom.

We will not condescend to refute at length the pleas which the compiler of the Memoirs before us has copied from Doctor Preuss. They amount to this, that the House of Brandenburg had some ancient pretensions to Silesia, and had in the previous century been compelled, by hard uage on the part of the Court of Vienna, to waive those pretensions. It is certain that, whoever might originally have been in the right, Prussia had submitted. Prince after prince of the House of Brandenburg had acquiesced in the existing arrangement. Nay, the Court of Berlin had recently been allied with that of Vienna, and had guaranteed the integrity of the Austrian states. Is it not perfectly clear that, if antiquated claims are to be set up against recent treaties and long possession, the world can never be at peace for a

day? The laws of all nations have wisely established a time of limitation, after which titles, however illegitimate in their origin, cannot be questioned. It is felt by everybody, that to eject a person from his estate on the ground of some injustice committed in the time of the Tudors would produce all the evils which result from arbitrary confiscation, and would make all property insecure. It concerns the commonwealth—so runs the legal maxim—that there be an end of litigation. And surely this maxim is at least equally applicable to the great commonwealth of states; for in that commonwealth litigation means the devastation of provinces, the suspension of trade and industry, sieges like those of Badajoz and St. Sebastian, pitched fields like those of Eylau and Borodino. We hold that the transfer of Norway from Denmark to Sweden was an unjustifiable proceeding; but would the King of Denmark be therefore justified in landing, without any new provocation in Norway, and commencing military operations there? The King of Holland thinks, no doubt, that he was unjustly deprived of the Belgian provinces. Grant that it were so. Would he, therefore, be justified in marching with an army on Brussels? The case against Frederic was still stronger, inasmuch as the injustice of which he complained had been committed more than a century before. Nor must it be forgotten that he owed the highest personal obligations to the House of Austria. It may be doubted whether his life had not been preserved by the intercession of the prince whose daughter he was about to plunder.

To do the King justice, he pretended to no more virtue than he had. In manifestoes he might, for form's sake, insert some idle stories about his antiquated claim on Silesia; but in his conversations and *Memoirs* he took a very different tone. His own words are: "Ambition, interest, the desire of making people talk about me, carried the day; and I decided for war."

Having resolved on his course, he acted with ability and vigour. It was impossible wholly to conceal his preparation; for throughout the Prussian territories regiments, guns, and baggage were in motion. The Austrian envoy at Berlin apprised his court of these facts, and expressed a suspicion of Frederic's designs; but the ministers of Maria Theresa refused to give credit to so black an imputation on a young prince who was known chiefly by his high professions of integrity and philanthropy. "We will not," they wrote, "we cannot, believe it."

In the meantime the Prussian forces had been assembled. Without any declaration of war, without any demand for reparation, in the very act of pouring forth compliments and assurances of goodwill, Frederic commenced hostilities. Many thousands of his troops were actually in Silesia before the Queen of Hungary knew that he had set up any claim to any part of her territories. At length he sent her a

message which could be regarded only as an insult. If she would but let him have Silesia, he would, he said, stand by her against any power which should try to deprive her of her other dominions; as if he was not already bound to stand by her, or as if his new promise could be of more value than the old one.

It was the depth of winter. The cold was severe, and the roads heavy with mire. But the Prussians pressed on. Resistance was impossible. The Austrian army was then neither numerous nor efficient. The small portion of that army which lay in Silesia was unprepared for hostilities. Glogau was blockaded; Breslau opened its gates; Ohlau was evacuated. A few scattered garrisons still held out; but the whole open country was subjugated: no enemy ventured to encounter the King in the field; and, before the end of January 1741, he returned to receive the congratulations of his subjects at Berlin.

Had the Silesian question been merely a question between Frederic and Maria Theresa, it would be impossible to acquit the Prussian King of gross perfidy. But when we consider the effects which his policy produced, and could not fail to produce, on the whole community of civilised nations, we are compelled to pronounce a condemnation still more severe. Till he began the war, it seemed possible, even probable, that the peace of the world would be preserved. The plunder of the great Austrian heritage was indeed a strong temptation; and in more than one cabinet ambitious schemes were already meditated. But the treaties by which the Pragmatic Sanction had been guaranteed were express and recent. To throw all Europe into confusion for a purpose clearly unjust, was no light matter. England was true to her engagements. The voice of Fleury had always been for peace. He had a conscience. He was now in extreme old age, and was unwilling, after a life which, when his situation was considered, must be pronounced singularly pure, to carry the fresh stain of a great crime before the tribunal of his God. Even the vain and unprincipled Belle-Isle, whose whole life was one wild day-dream of conquest and spoliation, felt that France, bound as she was by solemn stipulations, could not, without disgrace, make a direct attack on the Austrian dominions. Charles, Elector of Bavaria, pretended that he had a right to a large part of the inheritance which the Pragmatic Sanction gave to the Queen of Hungary; but he was not sufficiently powerful to move without support. It might, therefore, not unreasonably be expected that, after a short period of restlessness, all the potentates of Christendom would acquiesce in the arrangements made by the late Emperor. But the selfish rapacity of the King of Prussia gave the signal to his neighbours. His example quieted their sense of shame. His success led them to underrate the difficulty of dismembering the Austrian monarchy. The whole world sprang to arms. On the head of Frederic is all the blood which was shed in a war which raged dur-

ing many years and in every quarter of the globe, the blood of the column of Fontenoy, the blood of the mountaineers who were slaughtered at Culloden. The evils produced by his wickedness were felt in lands where the name of Prussia was unknown; and, in order that he might rob a neighbour whom he had promised to defend, black men fought on the coast of Coromandel, and red men scalped each other by the Great Lakes of North America.

Silesia had been occupied without a battle; but the Austrian troops were advancing to the relief of the fortresses which still held out. In the spring Frederic rejoined his army. He had seen little of war, and had never commanded any great body of men in the field. It is not, therefore, strange that his first military operations showed little of that skill which, at a later period, was the admiration of Europe. What connoisseurs say of some pictures painted by Raphael in his youth, may be said of this campaign. It was in Frederic's early bad manner. Fortunately for him, the generals to whom he was opposed were men of small capacity. The discipline of his own troops, particularly of the infantry, was unequalled in that age; and some able and experienced officers were at hand to assist him with their advice. Of these, the most distinguished was Field-Marshal Schwerin, a brave adventurer of Pomeranian extraction, who had served half the governments in Europe, had borne the commissions of the States-General of Holland and of the Duke of Mecklenburg, had fought under Marlborough at Blenheim, and had been with Charles the Twelfth at Bender.

Frederic's first battle was fought at Molwitz; and never did the career of a great commander open in a more inauspicious manner. His army was victorious. Not only, however, did he not establish his title to the character of an able general; but he was so unfortunate as to make it doubtful whether he possessed the vulgar courage of a soldier. The cavalry, which he commanded in person, was put to flight. Unaccustomed to the tumult and carnage of a field of battle, he lost his self-possession, and listened too readily to those who urged him to save himself. His English grey carried him many miles from the field, while Schwerin, though wounded in two places, manfully upheld the day. The skill of the old Field-Marshal and the steadiness of the Prussian battalions prevailed; and the Austrian army was driven from the field with the loss of eight thousand men.

The news was carried late at night to a mill in which the King had taken shelter. It gave him a bitter pang. He was successful; but he owed his success to dispositions which others had made, and to the valour of men who had fought while he was flying. So unpromising was the first appearance of the greatest warrior of that age.

The battle of Molwitz was the signal for a general explosion.

throughout Europe. Bavaria took up arms. France, not yet declaring herself a principal in the war, took part in it as an ally of Bavaria. The two great statesmen to whom mankind had owed many years of tranquillity, disappeared about this time from the scene, but not till they had both been guilty of the weakness of sacrificing their sense of justice and their love of peace to the vain hope of preserving their power. Fleury, sinking under age and infirmity, was borne down by the impetuosity of Belle-Isle. Walpole retired from the service of his ungrateful country to his woods and paintings at Houghton; and his power devolved on the daring and eccentric Carteret. As were the ministers, so were the nations. Thirty years during which Europe had, with few interruptions, enjoyed repose, had prepared the public mind for great military efforts. A new generation had grown up, which could not remember the siege of Turin or the slaughter of Malplaquet; which knew war by nothing but its trophies; and which, while it looked with pride on the tapestries at Blenheim, or the statue in the Place of Victories, little thought by what privations, by what waste of private fortunes, by how many bitter tears, conquests must be purchased.

For a time fortune seemed adverse to the Queen of Hungary. Frederic invaded Moravia. The French and Bavarians penetrated into Bohemia, and were there joined by the Saxons. Prague was taken. The Elector of Bavaria was raised by the suffrages of his colleagues to the Imperial throne, a throne which the practice of centuries had almost entitled the House of Austria to regard as a hereditary possession.

Yet was the spirit of the haughty daughter of the Cæsars unbroken. Hungary was still hers by an unquestionable title; and although her ancestors had found Hungary the most mutinous of all their kingdoms, she resolved to trust herself to the fidelity of a people, rude indeed, turbulent, and impatient of oppression, but brave, generous, and simple-hearted. In the midst of distress and peril she had given birth to a son, afterwards the Emperor Joseph the Second. Scarcely had she arisen from her couch, when she hastened to Presburg. There, in the sight of an innumerable multitude, she was crowned with the crown and robed with the robe of St. Stephen. No spectator could restrain his tears when the beautiful young mother, still weak from child-bearing, rode, after the fashion of her fathers, up the Mount of Defiance, unsheathed the ancient sword of state, shook it towards north and south, east and west, and, with a glow on her pale face, challenged the four corners of the world to dispute her rights and those of her boy. At the first sitting of the Diet she appeared clad in deep mourning for her father, and in pathetic and dignified words implored her people to support her just cause. Magnates and deputies sprang up, half drew their sabres, and with eager voices vowed to stand by

her with their lives and fortunes. Till then, her firmness had never once forsaken her before the public eye; but at that shout she sank down upon her throne, and wept aloud. Still more touching was the sight when, a few days later, she came again before the Estates of her realm, and held up before them the little Archduke in her arms. Then it was that the enthusiasm of Hungary broke forth into that war-cry which soon resounded throughout Europe, "Let us die for our King, Maria Theresa!"

In the meantime, Frederic was meditating a change of policy. He had no wish to raise France to supreme power on the Continent, at the expense of the House of Hapsburg. His first object was to rob the Queen of Hungary. His second object was that, if possible, nobody should rob her but himself. He had entered into engagements with the powers leagued against Austria; but these engagements were in his estimation of no more force than the guarantee formerly given to the Pragmatic Sanction. His plan now was to secure his share of the plunder by betraying his accomplices. Maria Theresa was little inclined to listen to any such compromise; but the English Government represented to her so strongly the necessity of buying off Frederic, that she agreed to negotiate. The negotiation would not, however, have ended in a treaty, had not the arms of Frederic been crowned with a second victory. Prince Charles of Lorraine, brother-in-law to Maria Theresa, a bold and active, though unfortunate general, gave battle to the Prussians at Chotusitz and was defeated. The King was still only a learner of the military art. He acknowledged, at a later period, that his success on this occasion was to be attributed, not at all to his own generalship, but solely to the valour and steadiness of his troops. He completely effaced, however, by his personal courage and energy, the stain which Molwitz had left on his reputation.

A peace, concluded under the English mediation, was the fruit of this battle. Maria Theresa ceded Silesia: Frederic abandoned his allies: Saxony followed his example; and the Queen was left at liberty to turn her whole force against France and Bavaria. She was everywhere triumphant. The French were compelled to evacuate Bohemia, and with difficulty effected their escape. The whole line of their retreat might be tracked by the corpses of thousands who had died of cold, fatigue, and hunger. Many of those who reached their country carried with them the seeds of death. Bavaria was overrun by bands of ferocious warriors from that bloody debatable land which lies on the frontier between Christendom and Islam. The terrible names of the Pandoor, the Croat, and the Hussar, then first became familiar to Western Europe. The unfortunate Charles of Bavaria, vanquished by Austria, betrayed by Prussia, driven from his hereditary states, and neglected by his allies, was hurried by shame and remorse to an untimely end. An English army appeared in the heart

of Germany, and defeated the French at Dettingen. The Austrian captains already began to talk of completing the work of Marlborough and Eugene, and of compelling France to relinquish Alsace and the three Bishoprics.

The Court of Versailles, in this peril, looked to Frederic for help. He had been guilty of two great treasons: perhaps he might be induced to commit a third. The Duchess of Chateauroux then held the chief influence over the feeble Lewis. She determined to send an agent to Berlin; and Voltaire was selected for the mission. He eagerly undertook the task; for, while his literary fame filled all Europe, he was troubled with a childish craving for political distinction. He was vain, and not without reason, of his address, and of his insinuating eloquence; and he flattered himself that he possessed boundless influence over the King of Prussia. The truth was that he knew, as yet, only one corner of Frederic's character. He was well acquainted with all the petty vanities and affectations of the poetaster; but was not aware that these foibles were united with all the talents and vices which lead to success in active life, and that the unlucky versifier who pestered him with reams of middling Alexandrines, was the most vigilant, suspicious, and severe of politicians.

Voltaire was received with every mark of respect and friendship, was lodged in the palace, and had a seat daily at the royal table. The negotiation was of an extraordinary description. Nothing can be conceived more whimsical than the conferences which took place between the first literary man and the first practical man of the age, whom a strange weakness had induced to exchange their parts. The great poet would talk of nothing but treaties and guarantees, and the great King of nothing but metaphors and rhymes. On one occasion Voltaire put into his Majesty's hands a paper on the state of Europe, and received it back with verses scrawled on the margin. In secret they both laughed at each other. Voltaire did not spare the King's poems; and the King has left on record his opinion of Voltaire's diplomacy. "He had no credentials," says Frederic, "and the whole mission was a joke, a mere farce."

But what the influence of Voltaire could not effect, the rapid progress of the Austrian arms effected. If it should be in the power of Maria Theresa and George the Second to dictate terms of peace to France, what chance was there that Prussia would long retain Silesia? Frederic's conscience told him that he had acted perfidiously and inhumanly towards the Queen of Hungary. That her resentment was strong she had given ample proof; and of her respect for treaties he judged by his own. Guarantees, he said, were mere filigree, pretty to look at, but too brittle to bear the slightest pressure. He thought it his safest course to ally himself closely to France, and again to attack the Empress Queen. Accordingly, in the autumn of 1744,

without notice, without any decent pretext, he recommenced hostilities, marched through the electorate of Saxony without troubling himself about the permission of the Elector, invaded Bohemia, took Prague, and even menaced Vienna.

It was now that, for the first time, he experienced the inconstancy of fortune. An Austrian army under Charles of Lorraine threatened his communications with Silesia. Saxony was all in arms behind him. He found it necessary to save himself by a retreat. He afterwards owned that his failure was the natural effect of his own blunders. No general, he said, had ever committed greater faults. It must be added, that to the reverses of this campaign he always ascribed his subsequent successes. It was in the midst of difficulty and disgrace that he caught the first clear glimpse of the principles of the military art.

The memorable year 1745 followed. The war raged by sea and land, in Italy, in Germany, and in Flanders; and even England, after many years of profound internal quiet, saw, for the last time, hostile armies set in battle array against each other. This year is memorable in the life of Frederic, as the date at which his noviciate in the art of war may be said to have terminated. There have been great captains whose precocious and self-taught military skill resembled intuition. Condé, Clive, and Napoleon are examples. But Frederic was not one of these brilliant portents. His proficiency in military science was simply the proficiency which a man of vigorous faculties makes in any science to which he applies his mind with earnestness and industry. It was at Hohenfriedberg that he first proved how much he had profited by her errors, and by their consequences. His victory on that day was chiefly due to his skilful dispositions, and convinced Europe that the prince who, a few years before, had stood aghast in the rout of Molwitz, had attained in the military art a mastery equalled by none of his contemporaries, or equalled by Saxe alone. The victory of Hohenfriedberg was speedily followed by that of Sorr.

In the meantime, the arms of France had been victorious in the Low Countries. Frederic had no longer reason to fear that Maria Theresa would be able to give law to Europe, and he began to meditate a fourth breach of his engagements. The Court of Versailles was alarmed and mortified. A letter of earnest expostulation, in the handwriting of Lewis, was sent to Berlin; but in vain. In the autumn of 1745, Frederic made peace with England, and, before the close of the year, with Austria also. The pretensions of Charles of Bavaria could present no obstacle to an accommodation. That unhappy prince was no more; and Francis of Lorraine, the husband of Maria Theresa, was raised, with the general assent of the Germanic body, to the Imperial throne.

Prussia was again at peace; but the European war lasted till, in the year 1748, it was terminated by the treaty of Aix-la-Chapelle. Of all the powers that had taken part in it, the only gainer was Frederic. Not only had he added to his patrimony the fine province of Silesia: he had, by his unprincipled dexterity, succeeded so well in alternately depressing the scale of Austria and that of France, that he was generally regarded as holding the balance of Europe, a high dignity for one who ranked lowest among kings, and whose great-grandfather had been no more than a Margrave. By the public, the King of Prussia was considered as a politician destitute alike of morality and decency, insatiably rapacious, and shamelessly false; nor was the public much in the wrong. He was at the same time allowed to be a man of parts, a rising general, a shrewd negotiator and administrator. Those qualities wherein he surpassed all mankind, were as yet unknown to others or to himself; for they were qualities which shine out only on a dark ground. His career had hitherto, with little interruption, been prosperous; and it was only in adversity, in adversity which seemed without hope or resource, in adversity which would have overwhelmed even men celebrated for strength of mind, that his real greatness could be shown.

He had, from the commencement of his reign, applied himself to public business after a fashion unknown among kings. Lewis the Fourteenth, indeed, had been his own prime minister, and had exercised a general superintendence over all the departments of the Government; but this was not sufficient for Frederic. He was not content with being his own prime minister: he would be his own sole minister. Under him there was no room, not merely for a Richelieu or a Mazarin, but for a Colbert, a Louvois, or a Torcy. A love of labour for its own sake, a restless and insatiable longing to dictate, to intermeddle, to make his power felt, a profound scorn and distrust of his fellow-creatures, made him unwilling to ask counsel, to confide important secrets, to delegate ample powers. The highest functionaries under his government were mere clerks, and were not so much trusted by him as valuable clerks are often trusted by the heads of departments. He was his own treasurer, his own commander-in-chief, his own intendant of public works, his own minister for trade and justice, for home affairs and foreign affairs, his own master of the horse, steward, and chamberlain. Matters of which no chief of an office in any other government would ever hear, were, in this singular monarchy, decided by the King in person. If a traveller wished for a good place to see a review, he had to write to Frederic, and received next day, from a royal messenger, Frederic's answer signed by Frederic's own hand. This was an extravagant, a morbid activity. The public business would assuredly have been better done if each department had been put under a man of talents and integrity,

and if the King had contented himself with a general control. In this manner the advantages which belong to unity of design, and the advantages which belong to the division of labour, would have been to a great extent combined. But such a system would not have suited the peculiar temper of Frederic. He could tolerate no will, no reason, in the State, save his own. He wished for no abler assistance than that of penmen who had just understanding enough to translate and transcribe, to make out his scrawls, and to put his concise Yes and No into an official form. Of the higher intellectual faculties, there is as much in a copying machine, or a lithographic press, as he required from a secretary of the cabinet.

His own exertions were such as were hardly to be expected from a human body or a human mind. At Potsdam, his ordinary residence, he rose at three in summer and four in winter. A page soon appeared, with a large basket full of all the letters which had arrived for the King by the last courier, despatches from ambassadors, reports from officers of revenue, plans of buildings, proposals for draining marshes, complaints from persons who thought themselves aggrieved, applications from persons who wanted titles, military commissions, and civil situations. He examined the seals with a keen eye; for he was never for a moment free from the suspicion that some fraud might be practised on him. Then he read the letters, divided them into several packets, and signified his pleasure, generally by a mark, often by two or three words, now and then by some cutting epigram. By eight he had generally finished this part of his task. The adjutant-general was then in attendance, and received instructions for the day as to all the military arrangements of the kingdom. Then the King went to review his guards, not as kings ordinarily review their guards, but with the minute attention and severity of an old drill-sergeant. In the meantime the four cabinet secretaries had been employed in answering the letters on which the King had that morning signified his will. These unhappy men were forced to work all the year round like negro slaves in the time of the sugar-crop. They never had a holiday. They never knew what it was to dine. It was necessary that, before they stirred, they should finish the whole of their work. The King, always on his guard against treachery, took from the heap a handful of letters at random, and looked into them to see whether his instructions had been exactly followed. This was no bad security against foul play on the part of the secretaries; for if one of them were detected in a trick, he might think himself fortunate if he escaped with five years of imprisonment in a dungeon. Frederic then signed the replies, and all were sent off the same evening.

The general principles on which this strange government was conducted, deserve attention. The policy of Frederic was essentially the

same as his father's; but Frederic, while he carried that policy to lengths to which his father never thought of carrying it, cleared it at the same time from the absurdities with which his father had encumbered it. The King's first object was to have a great, efficient, and well-trained army. He had a kingdom which in extent and population was hardly in the second rank of European powers; and yet he aspired to a place not inferior to that of the sovereigns of England, France, and Austria. For that end it was necessary that Prussia should be all sting. Lewis the Fifteenth, with five times as many subjects as Frederic, and more than five times as large a revenue, had not a more formidable army. The proportion which the soldiers in Prussia bore to the people seems hardly credible. Of the males in the vigor of life, a seventh part were probably under arms; and this great force had, by drilling, by reviewing, and by the unsparing use of cane and scourge, been taught to form all evolutions with a rapidity and as precision which would have astonished Villars or Eugene. The elevated feelings which are necessary to the best kind of army were then wanting to the Prussian service. In those ranks were not found the religious and political enthusiasm which inspired the pikemen of Cromwell, the patriotic ardour, the thirst of glory, the devotion to a great leader, which inflamed the Old Guard of Napoleon. But in all the mechanical parts of the military calling, the Prussians were as superior to the English and French of that day as the English and French troops to a rustic militia.

Though the pay of the Prussian soldier was small, though every rixdollar of extraordinary charge was scrutinized by Frederic with a vigilance and suspicion such as Mr. Joseph Hume never brought to the examination of an army estimate, the expense of such an establishment was, for the means of the country, enormous. In order that it might not be utterly ruinous, it was necessary that every other expense should be cut down to the lowest possible point. Accordingly Frederic, though his dominions bordered on the sea, had no navy. He neither had nor wished to have colonies. His judges, his fiscal officers, were meanly paid. His ministers at foreign courts walked on foot, or drove shabby old carriages till the axle-trees gave way. Even to his highest diplomatic agents, who resided at London and Paris, he allowed less than a thousand pounds sterling a year. The royal household was managed with a frugality unusual in the establishments of opulent subjects, unexampled in any other palace. The King loved good eating and drinking, and during great part of his life took pleasure in seeing his table surrounded by guests; yet the whole charge of his kitchen was brought within the sum of two thousand pounds sterling a year. He examined every extraordinary item with a care which might be thought to suit the mistress of a boarding-house better than a great prince. When more than four rix-

dollars were asked of him for a hundred oysters, he stormed as if he had heard that one of his generals had sold a fortress to the Empress Queen. Not a bottle of champagne was uncorked without his express order. The game of the royal parks and forests, a serious head of expenditure in most kingdoms, was to him a source of profit. The whole was farmed out; and though the farmers were almost ruined by their contract, the King would grant them no remission. His wardrobe consisted of one fine gala dress, which lasted him all his life; of two or three old coats fit for Monmouth Street, of yellow waistcoats soiled with snuff, and of huge boots embrowned by time. One taste alone sometimes allured him beyond the limits of parsimony, nay, even beyond the limits of prudence, the taste for building. In all other things his economy was such as we might call by a harsher name, if we did not reflect that his funds were drawn from a heavily taxed people, and that it was impossible for him, without excessive tyranny, to keep up at once a formidable army and a splendid court.

Considered as an administrator, Frederic had undoubtedly many titles to praise. Order was strictly maintained throughout his dominions. Property was secure. A great liberty of speaking and of writing was allowed. Confident in the irresistible strength derived from a great army, the King looked down on malcontents and libellers with a wise disdain; and gave little encouragement to spies and informers. When he was told of the disaffection of one of his subjects, he merely asked, "How many thousand men can he bring into the field?" He once saw a crowd staring at something on a wall. He rode up and found that the object of curiosity was a scurrilous placard against himself. The placard had been posted up so high that it was not easy to read it. Frederic ordered his attendants to take it down and put it lower. "My people and I," he said, "have come to an agreement which satisfies us both. They are to say what they please, and I am to do what I please." No person would have dared to publish in London satires on George the Second approaching to the atrocity of those satires on Frederic, which the booksellers at Berlin sold with impunity. One bookseller sent to the palace a copy of the most stinging lampoon that perhaps was ever written in the world, the *Memoirs of Voltaire*, published by Beaumarchais, and asked for his Majesty's orders. "Do not advertise it in an offensive manner," said the King; "but sell it by all means. I hope it will pay you well." Even among statesmen accustomed to the license of a free press, such steadfastness of mind as this is not very common.

It is due to the memory of Frederic to say that he earnestly laboured to secure to his people the great blessing of cheap and speedy justice. He was one of the first rulers who abolished the cruel and absurd practice of torture. No sentence of death, pronounced by the ordinary

tribunals, was executed without his sanction; and his sanction, except in cases of murder, was rarely given. Towards his troops he acted in a very different manner. Military offences were punished with such barbarous scourging that to be shot was considered by the Prussian soldier as a secondary punishment. Indeed, the principle which pervaded Frederic's whole policy was this, that the more severely the army is governed, the safer it is to treat the rest of the community with lenity.

Religious persecution was unknown under his government, unless some foolish and unjust restrictions which lay upon the Jews may be regarded as forming an exception. His policy with respect to the Catholics of Selisia presented an honourable contrast to the policy which, under very similar circumstances, England long followed with respect to the Catholics of Ireland. Every form of religion and irreligion found an asylum in the States. The scoffer whom the parliaments of France had sentenced to a cruel death, was consoled by a commission in the Prussian service. The Jesuit who could show his face nowhere else, who in Britain was still subject to penal laws, who was proscribed by France, Spain, Portugal, and Naples, who had been given up even by the Vatican, found safety and the means of subsistence in the Prussian dominions.

Most of the vices of Frederic's administration resolve themselves into one vice, the spirit of meddling. The indefatigable activity of his intellect, his dictatorial temper, his military habits, all inclined him to this great fault. He drilled his people as he drilled his grenadiers. Capital and industry were diverted from their natural direction by a crowd of preposterous regulations. There was a monopoly of coffee, a monopoly of tobacco, a monopoly of refined sugar. The public money, of which the King was generally so sparing, was lavishly spent in ploughing bogs, in planting mulberry trees amidst the sand, in bringing sheep from Spain to improve the Saxon wool, in bestowing prizes for fine yarn, in building manufacturers of porcelain, manufactories of carpets, manufactories of hardware, manufactories of lace. Neither the experience of other rulers, nor his own, could ever teach him that something more than an edict and a grant of public money was required to create a Lyons, a Brussels, or a Birmingham.

For his commercial policy, however, there was some excuse. He had on his side illustrious examples and popular prejudice. Grievously as he erred, he erred in company with his age. In other departments his meddling was altogether without apology. He interfered with the course of justice as well as with the course of trade; and set up his own crude notions of equity against the law as expounded by the unanimous voice of the gravest magistrates. It never occurred to him that men whose lives were passed to adjudicating

on questions of civil right were more likely to form correct opinions on such questions than a prince whose attention was divided among a thousand objects, and who had never read a law-book through. The resistance opposed to him by the tribunals inflamed him to fury. He reviled his Chancellor. He kicked the shins of his Judges. He did not, it is true, intend to act unjustly. He firmly believed that he was doing right, and defending the cause of the poor against the wealthy. Yet this well-meant meddling probably did far more harm than all the explosions of his evil passions during the whole of his long reign. We could make shift to live under a debauchee or a tyrant; but to be ruled by a busybody is more than human nature can bear.

The same passion for directing and regulating appeared in every part of the King's policy. Every lad of a certain station in life was forced to go to certain schools within the Prussian dominions. If a young Prussian repaired, though but for a few weeks, to Leyden or Göttingen for the purpose of study, the offence was punished with civil disabilities, and sometimes with the confiscation of property. Nobody was to travel without the royal permission. If the permission was granted, the pocket-money of the tourist was fixed by royal ordinance. A merchant might take with him two hundred and fifty rixdollars in gold, and a noble was allowed to take four hundred; for it may be observed, in passing, that Frederic studiously kept up the old distinctions between the nobles and the community. In speculation, he was a French philosopher, but in action, a German prince. He talked and wrote about the privileges of blood in the style of Sieyès; but in practice no chapter in the empire looked with a keener eye to genealogies and quarterings.

Such was Frederic the Ruler. But there was another Frederic, the Frederic of Rheinsberg, the fiddler and fluteplayer, the poetaster and metaphysician. Amidst the cares of State the King had retained his passion for music, for reading, for writing, for literary society. To these amusements he devoted all the time that he could snatch from the business of war and government; and perhaps more light is thrown on his character by what passed during his hours of relaxation, than by his battles or his laws.

It was the just boast of Schiller that, in his country, no Augustus, no Lorenzo, had watched over the infancy of poetry. The rich and energetic language of Luther, driven by the Latin from the schools of pedants, and by the French from the palaces of kings, had taken refuge among the people. Of the powers of that language Frederic had no notion. He generally spoke of it, and of those who used it, with the contempt of ignorance. His library consisted of French books; at his table nothing was heard but French conversation. The associates of his hours of relaxation were, for the most part,

foreigners. Britain furnished to the royal circle two distinguished men, born in the highest rank, and driven by civil dissensions from the land to which, under happier circumstances, their talents and virtues might have been a source of strength and glory. George Keith, Earl Marischal of Scotland, had taken arms for the House of Stuart in 1715; and his younger brother James, then only seventeen years old, had fought gallantly by his side. When all was lost they retired together to the Continent, roved from country to country, served under various standards, and so bore themselves as to win the respect and good-will of many who had no love for the Jacobite cause. Their long wanderings terminated at Potsdam; nor had Frederic any associates who deserved or obtained so large a share of his esteem. They were not only accomplished men, but nobles and warriors, capable of serving him in war and diplomacy, as well as of amusing him at supper. Alone of all his companions they appear never to have had reason to complain of his demeanor towards them. Some of those who knew the palace best pronounced that the Lord Marischal was the only human being whom Frederic ever really loved.

Italy sent to the parties at Potsdam the ingenious and amiable Algarotti, and Bastiani, the most crafty, cautious, and servile of Abbés. But the greater part of the society which Frederic had assembled round him, was drawn from France. Maupertuis had acquired some celebrity by the journey which he had made to Lapland, for the purpose of ascertaining, by actual measurements the shape of our planet. He was placed in the chair of the Academy of Berlin, a humble imitation of the renowned academy of Paris. Baculard D'Arnaud, a young poet, who was thought to have given promise of great things, had been induced to quit his country, and to reside at the Prussian Court. The Marquess D'Argens was among the King's favourite companions, on account, as it should seem, of the strong opposition between their characters. The parts of D'Argens were good, and his manners those of a finished French gentleman; but his whole soul was dissolved in sloth, timidity, and self-indulgence. He was one of that abject class of minds which are superstitious without being religious. Hating Christianity with a rancour which made him incapable of rational inquiry, unable to see in the harmony and beauty of the universe the traces of divine power and wisdom, he was the slave of dreams and omens, would not sit down to table with thirteen in company, turned pale if the salt fell towards him, begged his guests not to cross their knives and forks on their plates, and would not for the world commence a journey on Friday. His health was a subject of constant anxiety to him. Whenever his head ached, or his pulse beat quick, his dastardly fears and effeminate precautions were the jest of all Berlin. All this suited the King's purpose admirably. He wanted somebody by whom he might be

amused and whom he might despise. When he wished to pass half an hour in easy polished conversation, D'Argens was an excellent companion; when he wanted to vent his spleen and contempt, D'Argens was an excellent butt.

With these associates, and others of the same class, Frederic loved to spend the time which he could steal from public cares. He wished his supper parties to be gay and easy. He invited his guests to lay aside all restraint, and to forget that he was at the head of a hundred and sixty thousand soldiers, and was absolute master of the life and liberty of all who sat at meat with him. There was, therefore, at these parties the outward show of ease. The wit and learning of the company were ostentatiously displayed. The discussions on history and literature were often highly interesting. But the absurdity of all the religions known among men was the chief topic of conversation; and the audacity with which doctrines and names venerated throughout Christendom were treated on these occasions startled even persons accustomed to the society of French and English free-thinkers. Real liberty, however, or real affection, was in this brilliant society not to be found. Absolute kings seldom have friends: and Frederic's faults were such as, even where perfect equality exists, make friendship exceedingly precarious. He had indeed many qualities which, on a first acquaintance were captivating. His conversation was lively; his manners, to those whom he desired to please, were even caressing. No man could flatter with more delicacy. No man succeeded more completely in inspiring those who approached him with vague hopes of some great advantage from his kindness. But under this fair exterior he was a tyrant, suspicious, disdainful, and malevolent. He had one taste which may be pardoned in a boy, but which, when habitually and deliberately indulged by a man of mature age and strong understanding, is almost invariably the sign of a bad heart—a taste for severe practical jokes. If a courtier was fond of dress, oil was flung over his richest suit. If he was fond of money, some prank was invented to make him disburse more than he could spare. If he was hypochondriacal, he was made to believe that he had the dropsy. If he had particularly set his heart on visiting a place, a letter was forged to frighten him from going thither. These things, it may be said, are trifles. They are so; but they are indications, not to be mistaken, of a nature to which the sight of human suffering and human degradation is an agreeable excitement.

Frederic had a keen eye for the foibles of others, and loved to communicate his discoveries. He had some talent for sarcasm, and considerable skill in detecting the sore places where sarcasm would be most acutely felt. His vanity, as well as his malignity, found gratification in the vexation and confusion of those who smarted under his caustic jests. Yet in truth his success on these occasions

belonged quite as much to the king as to the wit. We read that Commodus descended, sword in hand, into the arena, against a wretched gladiator, armed only with a foil of lead, and, after shedding the blood of the helpless victim, struck medals to commemorate the inglorious victory. The triumphs of Frederic in the war of repartee were of much the same kind. How to deal with him was the most puzzling of questions. To appear constrained in his presence was to disobey his commands, and to spoil his amusement. Yet if his associates were enticed by his graciousness to indulge in the familiarity of a cordial intimacy, he was certain to make them repent of their presumption by some cruel humiliation. To resent his affronts was perilous; yet not to resent them was to deserve and to invite them. In his view, those who mutinied were insolent and ungrateful; those who submitted were curs made to receive bones and kickings with the same fawning patience. It is, indeed, difficult to conceive how anything short of the rage of hunger should have induced men to bear the misery of being the associates of the Great King. It was no lucrative post. His Majesty was as severe and economical in his friendships as in the other charges of his establishment, and as unlikely to give a rixdollar too much for his guests as for his dinners. The sum which he allowed to a poet or a philosopher was the very smallest sum for which such poet or philosopher could be induced to sell himself into slavery; and the bondsman might think himself fortunate, if what had been so grudgingly given was not, after years of suffering, rudely and arbitrarily withdrawn.

Potsdam was, in truth, what is was called by one of its most illustrious inmates, the Palace of Alcina. At the first glance it seemed to be a delightful spot, where every intellectual and physical enjoyment awaited the happy adventurer. Every newcomer was received with eager hospitality, intoxicated with flattery, encouraged to expect prosperity and greatness. It was in vain that a long succession of favourites who had entered that abode with delight and hope, and who, after a short term of delusive happiness, had been doomed to expiate their folly by years of wretchedness and degradation, raised their voices to warn the aspirant who approached the charmed threshold. Some had wisdom enough to discover the truth early, and spirit enough to fly without looking back; others lingered on to a cheerless and unhonoured old age. We have no hesitation in saying that the poorest author of that time in London, sleeping on a bulk, dining in a cellar, with a cravat of paper, and a skewer for a shirt-pin, was a happier man than any of the literary inmates of Frederic's Court.

But of all who entered the enchanted garden in the inebriation of delight, and quitted it in agonies of rage and shame, the most remarkable was Voltaire. Many circumstances had made him desirous

of finding a home at a distance from his country. His fame had raised him up enemies. His sensibility gave them a formidable advantage over him. They were, indeed, contemptible assailants. Of all that they wrote against him, nothing has survived except what he has himself preserved. But the constitution of his mind resembled the constitution of those bodies in which the slightest scratch of a bramble, or the bite of a gnat, never fails to fester. Though his reputation was rather raised than lowered by the abuse of such writers as Fréron and Desfontaines, though the vengeance which he took on Fréron and Desfontaines was such, that scourging, branding, pillorying, would have been a trifle to it, there is reason to believe that they gave him far more pain than he ever gave them. Though he enjoyed during his own lifetime the reputation of a classic, though he was extolled by his contemporaries above all poets, philosophers, and historians, though his works were read with as much delight and admiration at Moscow and Westminster, at Florence and Stockholm, as at Paris itself, he was yet tormented by that restless jealousy which should seem to belong only to minds burning with the desires of fame, and yet conscious of impotence. To men of letters who could by no possibility be his rivals, he was, if they behaved well to him, not merely just, not merely courteous, but often a hearty friend and a munificent benefactor. But to every writer who rose to a celebrity approaching his own, he became either a disguised or an avowed enemy. He silyly depreciated Montesquieu and Buffon. He publicly, and with violent outrage, made war on Rousseau. Nor had he the heart of hiding his feelings under the semblance of good humour or of contempt. With all his great talents, and all his long experience of the world, he had no more self-command than a petted child, or a hysterical woman. Whenever he was mortified, he exhausted the whole rhetoric of anger and sorrow to express his mortification. His torrents of bitter words, his stamping and cursing, his grimaces and his tears of rage, were a rich feast to those abject natures, whose delight is in the agonies of powerful spirits and in the abasement of immortal names. These creatures had now found out a way of galling him to the very quick. In one walk, at least, it had been admitted by envy itself that he was without a living competitor. Since Racine had been laid among the great men whose dust made the holy precinct of Port-Royal holier, no tragic poet had appeared who could contest the palm with the author of *Zaire*, of *Alzire*, and of *Merope*. At length a rival was announced. Old Crébillon, who, many years before, had obtained some theatrical success, and who had long been forgotten, came forth from his garret in one of the meanest lanes near the Rue St. Antoine, and was welcomed by the acclamations of envious men of letters, and of a capricious populace. A thing called *Catiline*, which he had written in his retirement, was acted with bound-

less applause. Of this execrable piece it is sufficient to say, that the plot turns on a love affair, carried on in all the forms of Scudéry, between Catiline, whose confidant is the Prætor Lentulus, and Tullia, the daughter of Cicero. The theatre resounded with acclamations. The King pensioned the successful poet; and the coffee-houses pronounced that Voltaire was a clever man, but that the real tragic inspiration, the celestial fire which had glowed in Corneille and Racine, was to be found in Crébillon alone.

The blow went to Voltaire's heart. Had his wisdom and fortitude been in proportion to the fertility of his intellect, and to the brilliancy of his wit, he would have seen that it was out of the power of all the puffers and detractors in Europe to put Catiline above Zaire; but he had none of the magnanimous patience with which Milton and Bentley left their claims to the unerring judgment of time. He eagerly engaged in an undignified competition with Crébillon, and produced a series of plays on the same subjects which his rival had treated. These pieces were coolly received. Angry with the court, angry with the capital, Voltaire began to find pleasure in the prospect of exile. His attachment for Madame du Châtelet long prevented him from executing his purpose. Her death set him at liberty; and he determined to take refuge at Berlin.

To Berlin he was invited by a series of letters, couched in terms of the most enthusiastic friendship and admiration. For once the rigid parsimony of Frederic seemed to have relaxed. Orders, honourable offices, a liberal pension, a well-served table, stately apartments under a royal roof, were offered in return for the pleasure and honour which were expected from the society of the first wit of the age. A thousand louis were remitted for the changes of the journey. No ambassador setting out from Berlin for a court of the first rank, had ever been more amply supplied. But Voltaire was not satisfied. At a later period, when he possessed an ample fortune, he was one of the most liberal of men; but till his means had become equal to his wishes, his greediness for lucre was unrestrained either by justice or by shame. He had the effrontery to ask for a thousand louis more, in order to enable him to bring his niece, Madame Denis, the ugliest of coquettes, in his company. The indelicate rapacity of the poet produced its natural effect on the severe and frugal King. The answer was a dry refusal. "I did not," said his Majesty, "solicit the honour of the lady's society." On this, Voltaire went off into a paroxysm of childish rage. "Was there ever such avarice? He has hundreds of tubs full of dollars in his vaults, and haggles with me about a poor thousand louis." It seemed that the negotiation would be broken off; but Frederic, with great dexterity, affected indifference, and seemed inclined to transfer his idolatry to Baculard D'Arnaud. His Majesty even wrote some bad verses, of which

the sense was, that Voltaire was a setting sun, and that D'Arnaud was rising. Good-natured friends soon carried the lines to Voltaire. He was in his bed. He jumped out in his shirt, danced about the room with rage, and sent for his passport and his post-horses. It was not difficult to foresee the end of a connection which had such a beginning.

It was in the year 1750 that Voltaire left the great capital, which he was not to see again till, after the lapse of near thirty years, he returned bowed down by extreme old age, to die in the midst of a splendid and ghastly triumph. His reception in Prussia was such as might well have elated a less vain and excitable mind. He wrote to his friends at Paris, that the kindness and the attention with which he had been welcomed surpassed description, that the King was the most amiable of men, that Potsdam was the paradise of philosophers. He was created chamberlain, and received, together with his gold key, the cross of an order, and a patent ensuring to him a pension of eight hundred pounds sterling a year for life. A hundred and sixty pounds a year were promised to his niece if she survived him. The royal cooks and coachmen were put at his disposal. He was lodged in the same apartments in which Saxe had lived, when, at the height of power and glory, he visited Prussia. Frederic, indeed, stooped for a time even to use the language of adulation. He pressed to his lips the meagre hand of the little grinning skeleton, whom he regarded as the dispenser of immortal renown. He would add, he said, to the titles which he owed to his ancestors and his sword, another title, derived from his last and proudest acquisition. His style should run thus: Frederic, King of Prussia, Margrave of Brandenburg, Sovereign Duke of Silesia, Possessor of Voltaire. But even amidst the delights of the honeymoon, Voltaire's sensitive vanity began to take alarm. A few days after his arrival, he could not help telling his niece that the amiable King had a trick of giving a sly scratch with one hand while patting and stroking with the other. Soon came hints not the less alarming, because mysterious. "The supper parties are delicious. The King is the life of the company. But—I have operas and comedies, reviews and concerts, my studies and books. But—but—Berlin is fine, the princesses charming, the maids of honour handsome. But—"

This eccentric friendship was fast cooling. Never had there met two persons so exquisitely fitted to plague each other. Each of them had exactly the fault of which the other was most impatient; and they were, in different ways, the most impatient of mankind. Frederic was frugal, almost niggardly. When he had secured his plaything he began to think that he had bought it too dear. Voltaire on the other hand, was greedy, even to the extent of imprudence and knavery; and conceived that the favourite of a monarch who had

barrels full of gold and silver laid up in cellars ought to make a fortune which a receiver-general might envy. They soon discovered each other's feelings. Both were angry; and a war began, in which Frederic stooped to the part of Harpagon, and Voltaire to that of Scapin. It is humiliating to relate, that the great warrior and statesman gave orders that his guest's allowance of sugar and chocolate should be curtailed. It is, if possible, a still more humiliating fact, that Voltaire indemnified himself by pocketing the wax candles in the royal antechamber. Disputes about money, however, were not the most serious disputes of these extraordinary associates. The sarcasms of the King soon galled the sensitive temper of the poet. D'Arnaud and D'Argens, Guichard and La Métrie, might, for the sake of a morsel of bread, be willing to bear the insolence of a master; but Voltaire was of another order. He knew that he was a potentate as well as Frederic, that his European reputation, and his incomparable power of covering whatever he hated with ridicule, made him an object of dread even to the leaders of armies and the rulers of nations. In truth, of all the intellectual weapons which have ever been wielded by man, the most terrible was the mockery of Voltaire. Bigots and tyrants, who had never been moved by the wailing and cursing of millions, turned pale at his name. Principles unassailable by reason, principles which had withstood the fiercest attacks of power, the most valuable truths, the most generous sentiments, the noblest and most graceful images, the purest reputations, the most august institutions, began to look mean and loathsome as soon as that withering smile was turned upon them. To every opponent, however strong in his cause and his talents, in his station and his character, who ventured to encounter the great scoffer, might be addressed the caution which was given of old to the Archangel:—

"I forewarn thee, shun
His deadly arrow; neither vainly hope
To be invulnerable in those bright arms,
Though temper'd heavenly; for that fatal dint,
Save Him who reigns above, none can resist."

We cannot pause to recount how often that rare talent was exercised against rivals worthy of esteem; how often it was used to crush and torture enemies worthy only of silent disdain; how often it was perverted to the more noxious purpose of destroying the last solace of earthly misery, and the last restraint on earthly power. Neither can we pause to tell how often it was used to vindicate justice, humanity, and toleration, the principles of sound philosophy, the principles of free government. This is not the place for a full character of Voltaire.

Causes of quarrel multiplied fast. Voltaire, who, partly from love

££ money, and partly from love of excitement, was always fond of stock-jobbing, became implicated in transactions of at least a dubious character. The King was delighted at having such an opportunity to humble his guest; and bitter reproaches and complaints were exchanged. Voltaire, too, was soon at war with the other men of letters who surrounded the King; and this irritated Frederic, who, however, had himself chiefly to blame: for, from that love of tormenting which was in him a ruling passion, he perpetually lavished extravagant praises on small men and bad books, merely in order that he might enjoy the mortification and rage which on such occasions Voltaire took no pains to conceal. His Majesty, however, soon had reason to regret the pains which he had taken to kindle jealousy among the members of his household. The whole palace was in a ferment with literary intrigues and cabals. It was to no purpose that the imperial voice, which kept a hundred and sixty thousand soldiers in order, was raised to quiet the concentration of the exasperated wits. It was far easier to stir up such a storm than to lull it. Nor was Frederic, in his capacity of wit, by any means without his own share of vexations. He had sent a large quantity of verses to Voltaire, and requested that they might be returned, with remarks and corrections. "See," exclaimed Voltaire, "what a quantity of his dirty linen the King has sent me to wash!" Talebearers were not wanting to carry the sarcasm to the royal ear; and Frederic was as much incensed as a Grub Street writer who had found his name in the *Dunciad*.

This could not last. A circumstance which, when the mutual regard of the friends was in its first glow, would merely have been matter for laughter, produced a violent explosion. Maupertuis enjoyed as much of Frederic's goodwill as any man of letters. He was President of the Academy of Berlin; and he stood second to Voltaire thought at an immense distancy, in the literary society which had been assembled at the Prussian Court. Frederic had, by playing for his own amusement on the feelings of the two jealous and vainglorious Frenchman, succeeded in producing a bitter enmity between them. Voltaire resolved to set his mark, a mark never to be effaced, in the forehead of Maupertuis, and wrote the exquisitely ludicrous *Diatribes* of Doctor Akakia. He showed this little piece to Frederic, who had too much taste and too much malice not to relish such delicious pleasantry. In truth, even at this time of day, it is not easy for any person who has the least perception of the ridiculous to read the jokes on the Latin city, the Patagonians, and the hole to the center of the earth, without laughing till he cries. But though Frederic was diverted by this charming pasquinade, he was unwilling that it should get abroad. His self-love was interested. He had selected Maupertuis to fill the chair of his Academy. If all Europe were taught to laugh at Maupertuis, would not the reputation of the Academy, would not even

the dignity of its royal patron, be in some degree compromised? The King, therefore, begged Voltaire to suppress this performance. Voltaire promised to do so, and broke his word. The *Diatribé* was published, and received with shouts of merriment and applause by all who could read the French language. The King stormed. Voltaire, with his usual disregard of truth, asserted his innocence, and made up some lie about a printer or an amanuensis. The King was not to be so imposed upon. He ordered the pamphlet to be burned by the common hangman, and insisted upon having an apology from Voltaire, couched in the most abject terms. Voltaire sent back to the King his cross, his key, and the patent of his pension. After this burst of rage, the strange pair began to be ashamed of their violence, and went through the forms of reconciliation. But the breach was irreparable; and Voltaire took his leave of Frederic for ever. They parted with cold civility; but their hearts were big with resentment. Voltaire had in his keeping a volume of the King's poetry, and forgot to return it. This was, we believe, merely one of the oversights which men setting out upon a journey often commit. That Voltaire could have meditated plagiarism is quite incredible. He would not, we are confident, for the half of Frederic's kingdom, have consented to father Frederic's verses. The King, however, who rated his own writings much above their value, and who was inclined to see all Voltaire's actions in the worst light, was enraged to think that his favourite compositions were in the hands of an enemy, as thievish as a daw and as mischievous as a monkey. In the anger excited by this thought, he lost sight of reason and decency, and determined on committing an outrage at once odious and ridiculous.

Voltaire had reached Frankfort. His niece, Madame Denis, came thither to meet him. He conceived himself secure from the power of his late master, when he was arrested by order of the Prussian resident. The precious volume was delivered up. But the Prussian agents had, no doubt, been instructed not to let Voltaire escape without some gross indignity. He was confined twelve days in a wretched hovel. Sentinels with fixed bayonets kept guard over him. His niece was dragged through the mire by the soldiers. Sixteen hundred dollars were extorted from him by his insolent gaolers. It is absurd to say that this outrage is not to be attributed to the King. Was anybody punished for it? Was anybody called in question for it? Was it not consistent with Frederic's character? Was it not of a piece with his conduct on others similar occasions? Is it not notorious that he repeatedly gave private directions to his officers to pillage and demolish the houses of persons against whom he had a grudge, charging them at the same time to take their measures in such a way that his name might not be compromised? He acted thus towards Count Bruhl in the Seven Years' War. Why should we

believe that he would have been more scrupulous with regard to Voltaire?

When at length the illustrious prisoner regained his liberty, the prospect before him was but dreary. He was an exile both from the country of his birth and from the country of his adoption. The French Government had taken offence at his journey to Prussia, and would not permit him to return to Paris; and in the vicinity of Prussia it was not safe for him to remain.

He took refuge on the beautiful shores of Lake Lemman. There, loosed from every tie which had hitherto restrained him, and having little to hope or to fear from courts and churches, he began his long war against all that, whether for good or evil, had authority over man; for what Burke said of the Constituent Assembly, was eminently true of this its great forerunner: Voltaire could not build: he could only pull down: he was the very Vitruvius of ruin. He has bequeathed to us not a single doctrine to be called by his name, not a single addition to the stock of our positive knowledge. But no human teacher ever left behind him so vast and terrible a wreck of truths and falsehoods, of things noble and things base, of things useful and things pernicious. From the time when his sojourn beneath the Alps commenced, the dramatist, the wit, the historian, was merged in a more important character. He was now the patriarch, the founder of a sect, the chief of a conspiracy, the prince of a wide intellectual commonwealth. He often enjoyed a pleasure dear to the better part of his nature, the pleasure of vindicating innocence which had no other helper, of repairing cruel wrongs, of punishing tyranny in high places. He had also the satisfaction, not less acceptable to his ravenous vanity, of hearing terrified Capuchins call him the Anti-christ. But whether employed in works of benevolence, or in works of mischief, he never forgot Potsdam and Frankfort; and he listened anxiously to every murmur which indicated that a tempest was gathering in Europe, and that his vengeance was at hand.

He soon had his wish. Maria Theresa had never for a moment forgotten the great wrong which she had received at the hand of Frederic. Young and delicate, just left an orphan, just about to be a mother, she had been compelled to fly from the ancient capital of her race; she had seen her fair inheritance dismembered by robbers, and of those robbers he had been the foremost. Without a pretext, without a provocation, in defiance of the most sacred engagements, he had attacked the helpless ally whom he was bound to defend. The Empress Queen had the faults as well as the virtues which are connected with quick sensibility and a high spirit. There was no peril which she was not ready to brave, no calamity which she was not ready to bring on her subjects, or on the whole human race, if only she might once taste the sweetness of a complete revenge. Revenge,

too, presented itself, to her narrow and superstitious mind, in the guise of duty. Silesia had been wrested not only from the House of Austria, but from the Church of Rome. The conqueror had indeed permitted his new subjects to worship God after their own fashion; but this was not enough. To bigotry it seemed an intolerable hardship that the Catholic Church, having long enjoyed ascendancy, should be compelled to content itself with equality. Nor was this the only circumstance which led Maria Theresa to regard her enemy as the enemy of God. The profaneness of Frederic's writings and conversation, and the frightful rumours which were circulated respecting the immorality of his private life, naturally shocked a woman who believed with the firmest faith all that her confessor told her, and who, though surrounded by temptations, though young and beautiful, though ardent in all her passions, though possessed of absolute power, had preserved her fame unsullied even by the breath of slander.

To recover Silesia, to humble the dynasty of Hohenzollern to the dust, was the great object of her life. She toiled during many years for this end, with zeal as indefatigable as that which the poet ascribed to the stately goddess who tired out her immortal horses in the work of raising the nations against Troy, and who offered to give up to destruction her darling Sparta and Mycenæ, if only she might once see the smoke going up from the palace of Priam. With even such a spirit did the proud Austrian Juno strive to array against her foe a coalition such as Europe had never seen. Nothing would content her but that the whole civilised world, from the White Sea to the Adriatic, from the Bay of Biscay to the pastures of the wild horses of the Tanais, should be combined in arms against one petty State.

She early succeeded by various arts in obtaining the adhesion of Russia. An ample share of spoil was promised to the King of Poland; and that prince, governed by his favourite, Count Bruhl, readily promised the assistance of the Saxon forces. The great difficulty was with France. That the Houses of Bourbon and of Hapsburg should ever cordially co-operate in any great scheme of European policy, had long been thought, to use the strong expression of Frederic, just as impossible as that fire and water should amalgamate. The whole history of the Continent, during two centuries and a half, had been the history of the mutual jealousies and enmities of France and Austria. Since the administration of Richelieu, above all, it had been considered as the plain policy of the Most Christian King to thwart on all occasions the Court of Vienna, and to protect every member of the Germanic body who stood up against the dictation of the Cæsars. Common sentiments of religion had been unable to mitigate this strong antipathy. The rulers of France, even while

clothed in the Roman purple, even while persecuting the heretics of Rochelle and Auvergne, had still looked with favour on the Lutheran and Calvinistic princes who were struggling against the chief of the empire. If the French ministers paid any respect to the traditional rules handed down to them through many generations, they would have acted towards Frederic as the greatest of their predecessors acted towards Gustavus Adolphus. That there was deadly enmity between Prussia and Austria was of itself a sufficient reason for close friendship between Prussia and France. With France Frederic could never have any serious controversy. His territories were so situated that his ambition, greedy and unscrupulous as it was, could never impel him to attack her of his own accord. He was more than half a Frenchman: he wrote, spoke, read nothing but French: he delighted in French society: the admiration of the French he proposed to himself as the best reward of all his exploits. It seemed incredible that any French Government, however notorious for levity or stupidity, could spurn away such an ally.

The Count of Vienna, however, did not despair. The Austrian diplomatists propounded a new scheme of politics, which, it must be owned, was not altogether without plausibility. The great powers, according to this theory, had long been under a delusion. They had looked on each other as natural enemies, while in truth they were natural allies. A succession of cruel wars had devastated Europe, had thinned the population, had exhausted the public resources, had loaded governments with an immense burden of debt; and when, after two hundred years of murderous hostility or of hollow truce, the illustrious Houses whose enmity had distracted the world sat down to count their gains, to what did the real advantage on either side amount? Simply to this, that they had kept each other from thriving. It was not the King of France, it was not the Emperor, who had reaped the fruits of the Thirty Years' War, or of the War of the Pragmatic Sanction. Those fruits had been pilfered by states of the second and third rank, which, secured against jealousy by their insignificance, had dexterously aggrandised themselves while pretending to serve the animosity of the great chiefs of Christendom. While the lion and tiger were tearing each other, the jackal had run off into the jungle with the prey. The real gainer by the Thirty Years' War had been neither France nor Austria, but Sweden. The real gainer by the War of the Pragmatic Sanction had been neither France nor Austria, but the upstart of Brandenburg. France had made great efforts, had added largely to her military glory, and largely to her public burdens; and for what end? Merely that Frederic might rule Silesia. For this and this alone one French army, wasted by sword and famine, had perished in Bohemia; and another had purchased with floods of the noblest blood, the barren glory of

Fontenoy. And this prince, for whom France had suffered so much, was he a grateful, was he even an honest ally? Had he not been as false to the Court of Versailles as to the Court of Vienna? Had he not played, on a large scale, the same part which, in private life, is played by the vile agent of chicane who sets his neighbours quarrelling, involves them in costly and interminable litigation, and betrays them to each other all round, certain that, whoever may be ruined, he shall be enriched? Surely the true wisdom of the great powers was to attack, not each other, but this common barrator, who, by inflaming the passions of both, by pretending to serve both, and by deserting both, had raised himself above the station to which he was born. The great object of Austria was to regain Silesia; the great object of France was to obtain an accession of territory on the side of Flanders. If they took opposite sides, the result would probably be that, after a war of many years, after the slaughter of many thousands of brave men, after the waste of many millions of crowns, they would lay down their arms without having achieved either object; but, if they came to an understanding, there would be no risk, and no difficulty. Austria would willingly make in Belgium such cessions as France could not expect to obtain by ten pitched battles. Silesia would easily be annexed to the monarchy of which it had long been a part. The union of two such powerful governments would at once overawe the King of Prussia. If he resisted, one short campaign would settle his fate. France and Austria, long accustomed to rise from the game of war both losers, would, for the first time, both be gainers. There could be no room for jealousy between them. The power of both would be increased at once; the equilibrium between them would be preserved; and the only sufferer would be a mischievous and unprincipled buccaneer, who deserved no tenderness from either.

These doctrines, attractive from their novelty and ingenuity, soon became fashionable at the supper-parties and in the coffee-houses of Paris, and were espoused by every gay marquis and every facetious abbé who was admitted to see Madame de Pompadour's hair curled and powdered. It was not, however, to any political theory that the strange coalition between France and Austria owed its origin. The real motive which induced the great continental powers to forget their old animosities and their old state maxims was personal aversion to the King of Prussia. This feeling was strongest in Maria Theresa; but it was by no means confined to her. Frederic, in some respects a good master, was emphatically a bad neighbour. That he was hard in all dealings, and quick to take all advantages, was not his most odious fault. His bitter and scoffing speech had inflicted keener wounds than his ambition. In his character of wit he was under less restraint than even in his character of ruler. Satirical

verses against all the princes and ministers of Europe were ascribed to his pen. In his letters and conversation he alluded to the greatest potentates of the age in terms which would have better suited Collé, in a war of repartee with young Crébillon at Pelletier's table, than a great sovereign speaking of great sovereigns. About women he was in the habit of expressing himself in a manner which it was impossible for the meekest of women to forgive; and, unfortunately for him, almost the whole Continent was then governed by women who were by no means conspicuous for meekness. Maria Theresa herself had not escaped his scurrilous jests. The Empress Elizabeth of Russia knew that her gallantries afforded him a favourite theme for ribaldry and invective. Madame de Pompadour, who was really the head of the French Government, had been even more keenly galled. She had attempted, by the most delicate flattery, to propitiate the King of Prussia; but her messages had drawn from him only dry and sarcastic replies. The Empress Queen took a very different course. Though the haughtiest of princesses, though the most austere of matrons, she forgot in her thirst for revenge both the dignity of her race and the purity of her character, and condescended to flatter the low-born and low-minded concubine, who, having acquired influence by prostituting herself, retained it by prostituting others. Maria Theresa actually wrote with her own hand a note, full of expressions of esteem and friendship to her dear cousin, the daughter of the butcher Poisson, the wife of the publican D'Etioles, the kidnapper of young girls for the haram of an old rake, a strange cousin for the descendant of so many Emperors of the West! The mistress was completely gained over, and easily carried her point with Lewis, who had, indeed, wrongs of his own to resent. His feelings were not quick, but contempt, says the Eastern proverb, pierces even through the shell of the tortoise; and neither prudence nor decorum had ever restrained Frederic from expressing his measureless contempt for the sloth, the imbecility, and the baseness of Lewis. France was thus induced to join the coalition; and the example of France determined the conduct of Sweden, then completely subject to French influence.

The enemies of Frederic were surely strong enough to attack him openly; but they were desirous to add to all their other advantages the advantage of a surprise. He was not, however, a man to be taken off his guard. He had tools in every Court; and he now received from Vienna, from Dresden, and from Paris, accounts so circumstantial and so consistent, that he could not doubt of his danger. He learnt, that he was to be assailed at once by France, Austria, Russia, Saxony, Sweden, and the Germanic body; that the greater part of his dominions was to be portioned out among his enemies; that France, which from geographical position could not directly share in his spoils, was to receive an equivalent in the

Netherlands; that Austria was to have Silesia, and the Czarina East Prussia; that Augustus of Saxony expected Madgeburg; and that Sweden would be rewarded with part of Pomerania. If these designs succeeded, the House of Brandenburg would at once sink in the European system to a place lower than that of the Duke of Würtemberg or the Margrave of Baden.

And what hope was there that these designs would fail? No such union of the continental powers had been seen for ages. A less formidable confederacy had in a week conquered all the provinces of Venice, when Venice was at the height of power, wealth and glory. A less formidable confederacy had compelled Lewis the Fourteenth to bow down his haughty head to the very earth. A less formidable confederacy has, within our own memory, subjugated a still mightier empire, and abused a still prouder name. Such odds had never been heard of in war. The people whom Frederic ruled were not five millions. The population of the countries which were leagued against him amounted to a hundred millions. The disproportion in wealth was at least equally great. Small communities, actuated by strong sentiments of patriotism or loyalty, have some times made head against great monarchies weakened by factions and discontents. But small as was Frederic's kingdom, it probably contained a greater number of disaffected subjects than were to be found in all the states of his enemies. Silesia formed a fourth part of his dominions; and from the Silesians, born under Austrian princes, the utmost that he could expect was apathy. From the Silesian Catholics he could hardly expect anything but resistance.

Some states have been enabled, by their geographical position, to defend themselves with advantage against immense force. The sea has repeatedly protected England against the fury of the whole Continent. The Venetian Government, driven from its possessions on the land, could still bid defiance to the confederates of Cambray from the arsenal amidst the lagoons. More than one great and well appointed army, which regarded the shepherds of Switzerland as an easy prey, has perished in the passes of the Alps. Frederic had no such advantage. The form of his states, their situation, the nature of the ground, all were against him. His long, scattered, straggling territory seemed to have been shaped with an express view to the convenience of invaders, and was protected by no sea, by no chain of hills. Scarcely any corner of it was a week's march from the territory of the enemy. The capital itself, in the event of war, would be constantly exposed to insult. In truth there was hardly a politician or a soldier in Europe who doubted that the conflict would be terminated in a very few days by the prostration of the House of Brandenburg.

Nor was Frederic's own opinion very different. He anticipated

nothing short of his own ruin, and of the ruin of his family. Yet there was still a chance, a slender chance, of escape. His states had at least the advantage of a central position; his enemies were widely separated from each other, and could not conveniently unite their overwhelming forces on one point. They inhabited different climates, and it was probable that the season of the year which would be best suited to the military operations of one portion of the League, would be unfavorable to those of another portion. The Russian monarchy, too, was free from some infirmities which were found in empires far more extensive and magnificent. Its effective strength for a desperate struggle was not to be measured merely by the number of square miles or the number of people. In that spare but well-knit and well exercised body, there was nothing but sinew, and muscle and bone. No public creditors looked for dividend. No distant colonies required defence. No Court, filled with flatterers and mistresses, devoured the pay of fifty battalions. The Prussian army, though far inferior in number to the troops which were about to be opposed to it, was yet strong out of all proportion to the extent of the Prussian dominions. It was also admirably trained and admirably officered, accustomed to obey and accustomed to conquer. The revenue was not only unincumbered by debt, but exceeded the ordinary outlay in time of peace. Alone of all the European princes, Frederic had a treasure laid up for a day of difficulty. Above all, the was one, and his enemies were many. In their camps would certainly be found the jealousy, the dissension, the slackness inseparable from coalitions; on his side was the energy, the unity, the secrecy of a strong dictatorship. To a certain extent the deficiency of military means might be supplied by the resources of military art. Small as the King's army was, when compared with the six hundred thousand men whom the confederates could bring into the field, celerity of movement might in some degree compensate for deficiency of bulk. It was thus just possible that genius, judgment, resolution, and good luck united, might protract the struggle during a campaign or two; and to gain even a month was of importance. It could not be long before the vices which are found in all extensive confederacies would begin to show themselves. Every member of the League would think his own share of the war too large, and his own share of the spoils too small. Complaints and recriminations would abound. The Turk might stir on the Danube; the statesmen of France might discover the error which they committed in abandoning the fundamental principles of their national policy. Above all, death might rid Prussia of its most formidable enemies. The war was the effect of the personal aversion with which three or four sovereigns regarded Frederic; and the decease of any one of those sovereigns might produce a complete revolution in the state of Europe.

In the midst of a horizon generally dark and stormy, Frederic could discern one bright spot. The peace which had been concluded between England and France in 1748, had been in Europe no more than an armistice; and had not even been an armistice in the other quarters of the globe. In India the sovereignty of the Carnatic was disputed between two great Mussulman houses; Fort Saint George had taken one side, Pondicherry the other; and in a series of battles and sieges the troops of Lawrence and Clive had been opposed to those of Dupleix. A struggle less important in its consequences, but not less likely to produce irritation, was carried on between those French and English adventurers, who kidnapped negroes and collected gold dust on the coast of Guinea. But it was in North America that the emulation and mutual aversion of the two nations were most conspicuous. The French attempted to hem in the English colonists by a chain of military posts, extending from the Great Lakes to the mouth of the Mississippi. The English took arms. The wild aboriginal tribes appeared on each side mingled with the Pale-Faces. Battles were fought; forts were stormed; and hideous stories about stakes, scalplings, and death-songs reached Europe, and inflamed that national animosity which the rivalry of ages had produced. The disputes between France and England came to a crisis at the very time when the tempest which had been gathering was about to burst on Prussia. The tastes and interests of Frederic would have led him, if he had been allowed an option, to side with the House of Bourbon. But the folly of the Court of Versailles left him no choice. France became the tool of Austria; and Frederic was forced to become the ally of England. He could not, indeed, expect that a power which covered the sea with its fleets, and which had to make war at once on the Ohio and the Ganges, would be able to spare a large number of troops for operations in Germany. But England, though poor compared with the England of our time, was far richer than any country on the Continent. The amount of her revenue, and the resources which she found in her credit, though they may be thought small by a generation which has seen her raise a hundred and thirty millions in a single year, appeared miraculous to the politicians of that age. A very moderate portion of her wealth, expended by an able and economical prince, in a country where prices were low, would be sufficient to equip and maintain a formidable army.

Such was the situation in which Frederic found himself. He saw the whole extent of his peril. He saw that there was still a faint possibility of escape; and, with prudent temerity, he determined to strike the first blow. It was in the month of August 1756, that the great war of the Seven Years commenced. The King demanded of the Empress Queen a distinct explanation of her intentions, and

plainly told her that he should consider a refusal as a declaration of war. "I want," he said, "no answer in the style of an oracle." He received an answer at once haughty and evasive. In an instant the rich electorate of Saxony was overflowed by sixty thousand Prussian troops. Augustus with his army occupied a strong position at Pirna. The Queen of Poland was at Dresden. In a few days Pirna was blockaded and Dresden was taken. The first object of Frederic was to obtain possession of the Saxon State papers; for those papers, he well knew, contained ample proofs that, though apparently an aggressor, he was really acting in self-defence. The Queen of Poland, as well acquainted as Frederic with the importance of those documents, had packed them up, and concealed them in her bed-chamber, and was about to send them off to Warsaw, when a Prussian officer made his appearance. In the hope that no soldier would venture to outrage a lady, a queen, a daughter of an emperor, the mother-in-law of a dauphin, she placed herself before the trunk, and at length sat down on it. But all resistance was vain. The papers were carried to Frederic, who found in them, as he expected, abundant evidence of the designs of the coalition. The most important documents were instantly published, and the effect of the publication was great. It was clear that, of whatever sins the King of Prussia might formerly have been guilty, he was now the injured party, and had merely anticipated a blow intended to destroy him.

The Saxon camp at Pirna was in the meantime closely invested; but the besieged were not without hopes of succour. A great Austrian army under Marshal Brown was about to pour through the passes which separate Bohemia from Saxony. Frederic left at Pirna a force sufficient to deal with the Saxons, hastened into Bohemia, encountered Brown at Lowositz, and defeated him. This battle decided the fate of Saxony. Augustus and his favorite Bruhl fled to Poland. The whole army of the Electorate capitulated. From that time till the end of the war, Frederic treated Saxony as a part of his dominions, or, rather, he acted towards the Saxons in a manner which may serve to illustrate the whole meaning of that tremendous sentence, "*subjectos tanquam suos, viles tanquam alienos.*" Saxony was as much in his power as Brandenburg; and he had no such interest in the welfare of Saxony as he had in the welfare of Brandenburg. He accordingly levied troops and exacted contributions throughout the enslaved province, with far more rigour than in any part of his own dominions. Seventeen thousand men who had been in the camp at Pirna were half compelled, half persuaded to enlist under their conqueror. Thus, within a few weeks from the commencement of hostilities, one of the confederates had been disarmed, and his weapons were now pointed against the rest.

The winter put a stop to military operations. All had hitherto

gone well. But the real tug of war was still to come. It was easy to foresee that the year 1757 would be a memorable era in the history of Europe.

The King's scheme for the campaign was simple, bold, and judicious. The Duke of Cumberland with an English and Hanoverian army was in Western Germany, and might be able to prevent the French troops from attacking Prussia. The Russians, confined by their snows, would probably not stir till the spring was far advanced. Saxony was prostrated. Sweden could do nothing very important. During a few months Frederic would have to deal with Austria alone. Even thus the odds were against him. But ability and courage have often triumphed against odds still more formidable.

Early in 1757 the Prussian arm in Saxony began to move. Through four defiles in the mountains they came pouring into Bohemia. Prague was the King's first mark; but the ulterior object was probably Vienna. At Prague lay Marshal Brown with one great army. Daun, the most cautious and fortunate of the Austrian captains, was advancing with another. Frederic determined to overwhelm Brown before Daun should arrive. On the sixth of May was fought, under those walls which, a hundred and thirty years before, had witnessed the victory of the Catholic league and the flight of the unhappy Palatine, a battle more bloody than any which Europe saw during the long interval between Malplaquet and Eylau. The King and Prince Ferdinand of Brunswick were distinguished on that day by their valour and exertions. But the chief glory was with Schwerin. When the Prussian infantry wavered, the stout old marshal snatched the colors from an ensign, and, waving them in the air, led back his regiment to the charge. Thus at seventy-two years of age he fell in the thickest battle, still grasping the standard which bears the black eagle on the field argent. The victory remained with the King; but it had been dearly purchased. Whole columns of his bravest warriors had fallen. He admitted that he had lost eighteen thousand men. Of the enemy, twenty-four thousand had been killed, wounded, or taken.

Part of the defeated army was shut up in Prague. Part fled to join the troops which, under the command of Daun, were now close at hand. Frederic determined to play over the same game which had succeeded at Lowositz. He left a large force to besiege Prague, and at the head of thirty thousand men he marched against Daun. The cautious Marshal, though he had a great superiority in numbers, would risk nothing. He occupied at Kolin a position almost impregnable, and awaited the attack of the King.

It was the eighteenth of June, a day which, if the Greek superstition still retained its influence, would be held sacred to Nemesis, a day on which the two greatest princes of modern times were taught,

by a terrible experience, that neither skill nor valor can fix the inconstancy of fortune. The battle began before noon; and part of the Prussian army maintained the contest till after the midsummer sun had gone down. But at length the King found that his troops, having been repeatedly driven back with frightful carnage, could no longer be led to the charge. He was with difficulty persuaded to quit the field. The officers of his personal staff were under the necessity of expostulating with him, and one of them took the liberty to say, "Does your Majesty mean to storm the batteries alone?" Thirteen thousand of his bravest followers had perished. Nothing remained for him but to retreat in good order, to raise the siege of Prague, and to hurry his army by different routes out of Bohemia.

This stroke seemed to be final. Frederic's situation had at best been such, that only an uninterrupted run of good luck could save him, as it seemed, from ruin. And now, almost in the outset of the contest he had met with a check which, even in a war between equal powers, would have been felt as serious. He had owed much to the opinion which all Europe entertained of his army. Since his accession, his soldiers had in many successive battles been victorious over the Austrians. But the glory had departed from his arms. All whom his malevolent sarcasms had wounded, made haste to avenge themselves by scoffing at the scoffer. His soldiers had ceased to confide in his star. In every part of his camp his dispositions were severely criticised. Even in his own family he had detractors. His next brother, William, heir-presumptive, or rather, in truth, heir-apparent to the throne, and great-grandfather of the present King, could not refrain from lamenting his own fate and that of the House of Hohenzollern, once so great and so prosperous, but now, by the rash ambition of its chief, made a by-word to all nations. These complaints, and some blunders which William committed during the retreat from Bohemia, called forth the bitter displeasure of the inexorable King. The prince's heart was broken by the cutting reproaches of his brother; he quitted the army, retired to a country seat, and in a short time died of shame and vexation.

It seemed that the King's distress could hardly be increased. Yet at this moment another blow not less terrible than that of Kolin fell upon him. The French under Marshal D'Estrées had invaded Germany. The Duke of Cumberland had given them battle at Hastenbeck, and had been defeated. In order to save the Electorate of Hanover from entire subjugation, he had made, at Closter Seven, an arrangement with the French Generals, which left them at liberty to turn their arms against the Prussian dominions.

That nothing might be wanted to Frederic's distress, he lost his mother just at this time; and he appears to have felt the loss more than was to be expected from the hardness and severity of his

character. In truth, his misfortunes had now cut to the quick. The mocker, the tyrant, the most rigorous, the most imperious, the most cynical of men, and was very unhappy. His face was so haggard, and his form so thin, that when on his return from Bohemia he passed through Leipsic, the people hardly knew him again. His sleep was broken; the tears, in spite of himself, often started into his eyes; and the grave began to present itself to his agitated mind as the best refuge from misery and dishonor. His resolution was fixed never to be taken alive, and never to make peace on condition of descending from his place among the powers of Europe. He saw nothing left for him except to die; and he deliberately chose his mode of death. He always carried about with him a sure and speedy poison in a small glass case; and to the few in whom he placed confidence, he made no mystery of his resolution.

But we should very imperfectly describe the state of Frederic's mind, if we left out the view the laughable peculiarities which contrasted so singularly with the gravity, energy, and harshness of his character. It is difficult to say whether the tragic or the comic predominated in the strange scene which was then acting. In the midst of all the great King's calamities, his passion for writing indifferent poetry grew stronger and stronger. Enemies all round him, despair in his heart, pills of corrosive sublimate hidden in his clothes, he poured forth hundreds upon hundreds of lines, hateful to gods and men, the insipid dregs of Voltaire's Hippocrene, the faint echo of the lyre of Chaulieu. It is amusing to compare what he did during the last months of 1757, with what he wrote during the same time. It may be doubted whether any equal portion of the life of Hannibal, of Cæsar, or of Napoleon, will bear a comparison with that short period, the most brilliant in the history of Prussia and of Frederic. Yet at this very time the scanty leisure of the illustrious warrior was employed in producing odes and epistles, a little better than Cibber's, and a little worse than Hayley's. Here and there a manly sentiment which deserves to be in prose makes its appearance in company with Prometheus and Orpheus, Elysium and Acheron, the Plaintive Philomel, the poppies of Morpheus, and all the other frippery which, like a robe tossed by a proud beauty to her waiting woman, has long been contemptuously abandoned by genius to mediocrity. We hardly know any instance of the strength and weakness of human nature so striking, and so grotesque, as the character of this haughty, vigilant, resolute, sagacious blue-stockings, half Mithridates and half Trissotin, bearing up against a world in arms, with an ounce of poison in one pocket and a quire of bad verses in the other.'

Frereric had some time before made advances towards a reconciliation with Voltaire; and some civil letters had passed between them.

After the battle of Kolin their epistolary intercourse became, at least in seeming, friendly and confidential. We do not know any collection of Letters which throws so much light on the darkest and most intricate parts of human nature, as the correspondence of these strange beings after they had exchanged forgiveness. Both felt that the quarrel had lowered them in the public estimation. They admired each other. They stood in need of each other. The great King wished to be handed down to posterity by the great Writer. The great Writer felt himself exalted by the homage of the great King. Yet the wounds which they had inflicted on each other were too deep to be effaced, or even perfectly healed. Not only did the scars remain; the sore places often festered and bled afresh. The letters consisted for the most part of compliments, thanks, offers of service, assurances of attachment. But if anything brought back to Frederic's recollection the cunning and mischievous pranks by which Voltaire had provoked him, some expression of contempt and displeasure broke forth in the midst of eulogy. It was much worse when anything recalled to the mind of Voltaire the outrages which he and his kinswoman had suffered at Frankfort. All at once his flowing panegyric was turned into invective. "Remember how you behaved to me. For your sake I have lost the favor of my native King. For your sake I am an exile from my country. I loved you. I trusted myself to you. I had no wish but to end my life in your service. And what was my reward? Stripped of all that you had bestowed on me, the key, the order, the pension, I was forced to fly from your territories. I was hunted as if I had been a deserter from your grenadiers. I was arrested, insulted, plundered. My niece was dragged through the mud of Frankfort by your soldiers, as if she had been some wretched follower of your camp. You have great talents. You have good qualities. But you have one odious vice. You delight in the abasement of your fellow-creatures. You have brought disgrace on the name of philosopher. You have given some color to the slanders of the bigots, who say that no confidence can be placed in the justice or humanity of those who reject the Christian faith." Then the King answers, with less heat but equal severity—"You know that you behaved shamefully in Prussia. It was well for you that you had to deal with a man so indulgent to the infirmities of genius as I am. You richly deserved to see the inside of a dungeon. Your talents are not more widely known than your faithfulness and your malevolence. The grave itself is no asylum from your spite. Maupertuis is dead; but you still go on calumniating and deriding him, as if you had not made him miserable enough while he was living. Let us have no more of this. And, above all, let me hear no more of your niece. I am sick to death

of her name. I can bear with your faults for the sake of your merits: but she has not written Mahomet or Merope."

An explosion of this kind, it might be supposed, would necessarily put an end to all amicable communication. But it was not so. After every outbreak of ill humor this extraordinary pair became more loving than before, and exchanged compliments and assurances of mutual regard with a wonderful air of sincerity.

It may well be supposed that men who wrote thus to each other, were not very guarded in what they said of each other. The English ambassador, Mitchell, who knew that the King of Prussia was constantly writing to Voltaire with the greatest freedom on the most important subjects, was amazed to hear his Majesty designate this highly favored correspondent as a bad-hearted fellow, the greatest rascal on the face of the earth. And the language which the poet held about the King was not much more respectful.

It would probably have puzzled Voltaire himself to say what was his real feeling towards Frederic. It was compounded of all sentiments, from enmity to friendship, and from scorn to admiration; and the proportions in which these elements were mixed, changed every moment. The old patriarch resembled the spoiled child who screams, stamps, cuffs, laughs, kisses, and cuddles within one quarter of an hour. His resentment was not extinguished; yet he was not without sympathy for his old friend. As a Frenchman, he wished success to the arms of his country. As a philosopher, he was anxious for the stability of a throne on which a philosopher sat. He longed both to save and to humble Frederic. There was one way, and only one, in which all his conflicting feelings could at once be gratified. If Frederic were preserved by the interference of France, if it were known that for that interference he was indebted to the mediation of Voltaire, this would indeed be delicious revenge; this would indeed be to heap coals of fire on that haughty head. Nor did the vain and restless poet think it impossible that he might, from his hermitage near the Alps, dictate peace to Europe. D'Estré had quitted Hanover, and the command of the French army had been intrusted to the Duke of Richelieu, a man whose chief distinction was derived from his success in gallantry. Richelieu was in truth the most eminent of that race of seducers by profession, who furnished Crébillon the younger and La Clos with models for their heroes. In his earlier days the royal house itself had not been secure from his presumptuous love. He was believed to have carried his conquests into the family of Orleans; and some suspected that he was not unconcerned in the mysterious remorse which embittered the last hours of the charming mother of Lewis the Fifteenth. But the Duke was now sixty years old. With a heart deeply corrupted by vice, a head long accustomed to think only on trifles, an impaired constitution,

an impaired fortune, and, worst of all, a very red nose, he was entering on a dull, frivolous, and unrespected old age. Without one qualification for military command, except that personal courage which was common between him and the whole nobility of France, he had been placed at the head of the army of Hanover; and in that situation he did his best to repair, by extortion and corruption, the injury which he had done to his property by a life of dissolute profusion.

The Duke of Richelieu to the end of his life hated the philosophers as a sect, not for those parts of their system which a good and wise man would have condemned, but for their virtues, for their spirit of free inquiry, and for their hatred of those social abuses of which he was himself the personification. But he, like many of those who thought with him, excepted Voltaire from the list of proscribed writers. He frequently sent flattering letters to Ferney. He did the patriarch the honor to borrow money of him, and even carried this condescending friendship so far as to forget to pay the interest. Voltaire thought that it might be in his power to bring the Duke and the King of Prussia into communication with each other. He wrote earnestly to both; and he so far succeeded that a correspondence between them was commenced.

But it was to very different means that Frederic was to owe his deliverance. At the beginning of November, the net seemed to have closed completely round him. The Russians were in the field, and were spreading devastation through his eastern provinces. Silesia was overrun by the Austrians. A great French army was advancing from the west under the command of Marshal Soubise, a prince of the great Armorican house of Rohan. Berlin itself had been taken and plundered by the Croats. Such was the situation from which Frederic extricated himself, with dazzling glory, in the short space of thirty days.

He marched first against Soubise. On the fifth of November the armies met at Rosbach. The French were two to one; but they were ill-disciplined, and their general was a dunce. The tactics of Frederic, and the well-regulated valor of the Prussian troops obtained a complete victory. Seven thousand of the invaders were made prisoners. Their guns, their colors, their baggage, fell into the hands of the conquerors. Those who escaped fled as confusedly as a mob scattered by cavalry. Victorious in the West, the King turned his arms towards Silesia. In that quarter everything seemed to be lost. Breslau had fallen; and Charles of Lorraine, with a mighty power, held the whole province. On the fifth of December, exactly one month after the battle of Rosbach, Frederic, with forty thousand men, and Prince Charles, at the head of not less than sixty thousand, met at Leuthen, hard by Breslau. The King, who was, in

general, perhaps too much inclined to consider the common soldier as a mere machine, resorted, on this great day, to means resembling those which Bonaparte afterwards employed with such signal success for the purpose of stimulating military enthusiasm. The principal officers were convoked. Frederic addressed them with great force and pathos; and directed them to speak to their men as he had spoken to them. When the armies were set in battle array, the Prussian troops were in a state of fierce excitement; but their excitement showed itself after the fashion of a grave people. The columns advanced to the attack chanting, to the sound of drums and fifes, the rude hymns of the old Saxon Sternholds. They had never fought so well; nor had the genius of their chief ever been so conspicuous. "That battle," said Napoleon, "was a masterpiece. Of itself it is sufficient to entitle Frederic to a place in the first rank among generals." The victory was complete. Twenty-seven thousand Austrians were killed, wounded, or taken; fifty stand of colors, a hundred guns, four thousand wagons, fell into the hands of the Prussians. Breslau opened its gates; Silesia was reconquered; Charles of Lorraine retired to his shame and sorrow at Brussels; and Frederic allowed his troops to take some repose in winter quarters, after a campaign, to the vicissitudes of which it will be difficult to find any parallel in ancient or modern history.

The King's fame filled all the world. He had during the last year, maintained a contest, on terms of advantage, against three powers, the weakest of which had more than three times his resources. He had fought four great pitched battles against superior forces. Three of these battles he had gained: and the defeat of Kolin, repaired as it had been, rather raised than lowered his military renown. The victory of Leuthen is, to this day, the proudest on the roll of Prussian fame. Leipsic indeed, and Waterloo, produced consequences more important to mankind. But the glory of Leipsic must be shared by the Prussians with the Austrians and Russians; and at Waterloo the British infantry bore the burden and heat of the day. The victory of Rosbach was, in a military point of view, less honorable than that of Leuthen; for it was gained over an incapable general, and a disorganized army; but the moral effect which it produced was immense. All the preceding triumphs of Frederic had been triumphs over Germans, and could excite no emotions of national pride among the German people. It was impossible that a Hessian or a Hanoverian could feel any patriotic exultation at hearing that Pomeranians had slaughtered Moravians, or that Saxon banners had been hung in the churches of Berlin. Indeed, though the military character of the Germans justly stood high throughout the world, they could boast of no great day which belonged to them as a people; of no Agincourt, of no Bannockburn. Most of their victories had

been gained over each other; and their most splendid exploits against foreigners had been achieved under the command of Eugene, who was himself a foreigner. The news of the battle of Rosbach stirred the blood of the whole of the mighty population from the Alps to the Baltic, and from the borders of Courland to those of Lorraine. Westphalia and Lower Saxony had been deluged by a great host of strangers, whose speech was unintelligible, and whose petulant and licentious manners had excited the strongest feelings of disgust and hatred. That great host had been put to flight by a small band of German warriors, led by a prince of German blood on the side of father and mother, and marked by their fair hair and the clear blue eye of Germany. Never since the dissolution of the empire of Charlemagne, had the Teutonic race won such a field against the French. The tidings called forth a general burst of delight and pride from the whole of the great family which spoke the various dialects of the ancient language of Arminius. The fame of Frederic began to supply, in some degree, the place of a common government and of a common capital. It became a rallying point for all true Germans, a subject of mutual congratulation to the Bavarian and the Westphalian, to the citizen of Frankfort, and to the citizen of Nuremberg. Then first it was manifest that the Germans were truly a nation. Then first was discernible that patriotic spirit which, in 1813, achieved the great deliverance of central Europe, and which still guards, and long will guard, against foreign ambition the old freedom of the Rhine.

Nor were the effects produced by that celebrated day merely political. The greatest masters of German poetry and eloquence have admitted that, though the great King neither valued nor understood his native language, though he looked on France as the only seat of taste and philosophy, yet, in his own despite, he did much to emancipate the genius of his countrymen from the foreign yoke; and that, in the act of vanquishing Soubise, he was, unintentionally, rousing the spirit which soon began to question the literary precedence of Boileau and Voltaire. So strangely do events confound all the plans of man. A prince who read only French, who wrote only French, who aspired to rank as a French classic, became, quite unconsciously, the means of liberating half the Continent from the dominion of that French criticism of which he was himself, to the end of his life, a slave. Yet even the enthusiasm of Germany in favor of Frederic hardly equalled the enthusiasm of England. The birthday of our ally was celebrated with as much enthusiasm as that of our own sovereign; and at night the streets of London were in a blaze with illuminations. Portraits of the Hero of Rosbach, with his cocked hat and long pigtail, were in every house. An attentive observer will, at this day, find in the parlors of old-fashioned inns, and in the

portfolios of print-sellers, twenty portraits of Frederic for one of George the Second. The sign-painters were everywhere employed in touching up Admiral Vernon into the King of Prussia. This enthusiasm was strong among religious people, and especially among the Methodists, who knew that the French and Austrians were Papists, and supposed Frederic to be the Joshua or Gideon of the Reformed Faith. One of Whitfield's hearers, on the day on which thanks for the battle of Leuthen were returned at the Tabernacle, made the following exquisitely ludicrous entry in a diary, part of which has come down to us: "The Lord stirred up the King of Prussia and his soldiers to pray. They kept three fast days, and spent about an hour praying and singing psalms before they engaged the enemy. O! how good it is to pray and fight!" Some young Englishmen of rank proposed to visit Germany as volunteers, for the purpose of learning the art of war under the greatest of commanders. This last proof of British attachment and admiration, Frederic politely but firmly declined. His camp was no place for amateur students of military science. The Prussian discipline was rigorous even to cruelty. The officers, while in the field, were expected to practise an abstemiousness and self-denial such as was hardly surpassed by the most rigid monastic orders. However noble their birth, however high their rank in the service, they were not permitted to eat from anything better than pewter. It was a high crime even in a count and field-marshal to have a single silver spoon among his baggage. Gay young Englishmen of twenty thousand a year, accustomed to liberty and luxury, would not easily submit to these Spartan restraints. The King could not venture to keep them in order as he kept his own subjects in order. Situated as he was with respect to England, he could not well imprison or shoot refractory Howards and Cavendishes. On the other hand, the example of a few fine gentlemen, attended by chariots and livery servants, eating in plates, and drinking champagne and Tokay, was enough to corrupt his whole army. He thought it best to make a stand at first, and civilly refused to admit such dangerous companions among his troops.

The help of England was bestowed in a manner far more useful and more acceptable. An annual subsidy of near seven hundred thousand pounds enabled the King to add probably more than fifty thousand men to his army. Pitt, now at the height of power and popularity, undertook the task of defending Western Germany against France, and asked Frederic only for the loan of a general. The general selected was Prince Ferdinand of Brunswick, who had attained high distinction in the Prussian service. He was put at the head of an army, partly English, partly Hanoverian, partly composed of mercenaries hired from the petty princes of the empire.

He soon vindicated the choice of the two allied Courts, and proved himself the second general of the age.

Frederic passed the winter at Breslau, in reading, writing, and preparing for the next campaign. The havoc which the war had made among his troops was rapidly repaired; and in the spring of 1758 he was again ready for the conflict. Prince Ferdinand kept the French in check. The King in the meantime, after attempting against the Austrians some operations which led to no very important result, marched to encounter the Russians, who, slaying, burning, and wasting wherever they turned, had penetrated into the heart of his realm. He gave them battle at Zorndorf, near Frankfort on the Oder. The fight was long and bloody. Quarter was neither given nor taken; for the Germans and Scythians regarded each other with bitter aversion, and the sight of the ravages committed by the half savage invaders, had incensed the King and his army. The Russians were overthrown with great slaughter; and for a few months no further danger was to be apprehended from the east.

A day of thanksgiving was proclaimed by the King, and was celebrated with pride and delight by his people. The rejoicings in England were not less enthusiastic or less sincere. This may be selected as the point of time at which the military glory of Frederic reached the zenith. In the short space of three quarters of a year he had won three great battles over the armies of three mighty and warlike monarchies, France, Austria, and Russia.

But it was decreed that the temper of that strong mind should be tried by both extremes of fortunes in rapid succession. Close upon this series of triumphs came a series of disasters, such as would have blighted the fame and broken the heart of almost any other commander. Yet Frederic, in the midst of his calamities, saw still an object of admiration to his subjects, his allies, and his enemies. Overwhelmed by adversity, sick of life, he still maintained the contest, greater in defeat, in flight, and in what seemed hopeless ruin, than on the fields of his proudest victories.

Having vanquished the Russians, he hastened into Saxony to oppose the troops of the Empress Queen, commanded by Daun, the most cautious, and Laudohn, the most inventive and enterprising of her generals. These two celebrated commanders agreed on a scheme, in which the prudence of the one and the vigor of the other seem to have been happily combined. At dead of night they surprised the King in his camp at Hochkirchen. His presence of mind saved his troops from destruction; but nothing could save them from defeat and severe loss. Marshal Keith was among the slain. The first roar of the guns roused the noble exile from his rest, and he was instantly in the front of the battle. He received a dangerous wound, but refused

to quit the field, and was in the act of rallying his broken troops, when an Austrian bullet terminated his chequered and eventful life.

The misfortune was serious. But of all generals Frederic understood best how to repair defeat, and Daun understood least how to improve victory. In a few days the Prussian army was as formidable as before the battle. The prospect was, however, gloomy. An Austrian army under General Harsch had invaded Silesia, and invested the fortress of Neisse. Daun, after his success at Hochkirchen, had written to Harsch in very confident terms:—"Go on with your operations against Neisse. Be quite at ease as to the King. I will give a good account of him." In truth, the position of the Prussians was full of difficulties. Between them and Silesia lay the victorious army of Daun. It was not easy for them to reach Silesia at all. If they did reach it, they left Saxony exposed to the Austrians. But the vigor and activity of Frederic surmounted every obstacle. He made a circuitous march of extraordinary rapidity, passed Daun, hastened into Silesia, raised the siege of Neisse, and drove Harsch into Bohemia. Daun availed himself of the King's absence to attack Dresden. The Prussians defended it desperately. The inhabitants of that wealthy and polished capital begged in vain for mercy from the garrison within, and from the besiegers without. The beautiful suburbs were burned to the ground. It was clear that the town, if won at all, would be won street by street by the bayonet. At this conjuncture came news, that Frederic, having cleared Silesia of his enemies, was returned by forced marches into Saxony. Daun retired from Dresden, and fell back into the Austrian territories. The King, over heaps of ruins, made his triumphant entry into the unhappy metropolis, which had so cruelly expiated the weak and perfidious policy of its sovereign. It was now the twentieth of November. The cold weather suspended military operations; and the King again took up his winter quarters at Breslau.

The third of the seven terrible years were over; and Frederic still stood his ground. He had been recently tried by domestic as well as by military disasters. On the fourteenth of October, the day on which he was defeated at Hochkirchen, the day on the anniversary of which, forty-eight years later, a defeat far more tremendous laid the Prussian monarchy in the dust, died Wilhelmina, Margravine of Bareuth. From the accounts which we have of her, by her own hand, and by the hands of the most discerning of her contemporaries, we should pronounce her to have been coarse, indelicate, and a good hater, but not destitute of kind and generous feelings. Her mind, naturally strong and observant, had been highly cultivated; and she was, and deserved to be, Frederic's favourite sister. He felt the loss as much as it was in his iron nature to feel the loss of anything but a province or a battle.

At Breslau, during the winter, he was indefatigable in his poetical labours. The most spirited lines, perhaps, that he ever wrote, are to be found in a bitter lampoon on Lewis and Madame de Pompadour, which he composed at this time, and sent to Voltaire. The verses were, indeed, so good, that Voltaire was afraid that he might himself be suspected of having written them, or at least of having corrected them; and partly from fright, partly, we fear, from love of mischief, sent them to the Duke of Choiseul, then prime minister of France. Choiseul very wisely determined to encounter Frederic at Frederic's own weapons, and applied for assistance to Palissot, who had some skill as a versifier, and some little talent for satire. Palissot produced some very stinging lines on the moral and literary character of Frederic, and these lines the Duke sent to Voltaire. This war of couplets, following close on the carnage of Zorndorf and the conflagration of Dresden, illustrates well the strangely compounded character of the King of Prussia.

At this moment he was assailed by a new enemy. Benedict the Fourteenth, the best and wisest of the two hundred and fifty successors of St. Peter, was no more. During the short interval between his reign and that of his disciple Ganganelli, the chief seat in the Church of Rome was filled by Rezzonico, who took the name of Clement the Thirteenth. This absurd priest determined to try what the weight of his authority could effect in favour of the orthodox Maria Theresa against a heretic king. At the high mass on Christmas-day, a sword with a rich belt and scabbard, a hat of crimson velvet lined with ermine, and a dove of pearls, the mystic symbol of the Divine Comforter, were solemnly blessed by the supreme pontiff, and were sent with great ceremony to Marshal Daun, the conqueror of Kolin and Hochkirchen. This mark of favour had more than once been bestowed by the Popes on the great champions of the faith. Similar honours had been paid, more than six centuries earlier, by Urban the Second to Godfrey of Bouillon. Similar honours had been conferred on Alba for destroying the liberties of the Low Countries, and on John Sobiesky after the deliverance of Vienna. But the presents which were received with profound reverence by the Baron of the Holy Sepulchre in the eleventh century, and which had not wholly lost their value even in the seventeenth century, appeared inexpressibly ridiculous to a generation which read Montesquieu and Voltaire. Frederic wrote sarcastic verses on the gifts, the giver, and the receiver. But the public wanted no prompter; and an universal roar of laughter from Petersburg to Lisbon reminded the Vatican that the age of crusades was over.

The fourth campaign, the most disastrous of all the campaigns of this fearful war, had now opened. The Austrians filled Saxony and menaced Berlin. The Russians defeated the King's generals on the

Oder, threatened Silesia, effected a junction with Laudohn, and intrenched themselves strongly at Kunersdorf. Frederic hastened to attack them. A great battle was fought. During the earlier part of the day everything yielded to the impetuosity of the Prussians, and to the skill of their chief. The lines were forced. Half the Russian guns were taken. The King sent off a courier to Berlin with two lines, announcing a complete victory. But in the meantime, the stubborn Russians, defeated yet unbroken, had taken up their stand in an almost impregnable position, on an eminence where the Jews of Frankfort were wont to bury their dead. Here the battle recommenced. The Prussian infantry, exhausted by six hours of hard fighting under a sun which equalled the tropical heat, were yet brought up repeatedly to the attack, but in vain. The King led three charges in person. Two horses were killed under him. The officers of his staff fell all round him. His coat was pierced by several bullets. All was in vain. His infantry was driven back with frightful slaughter. Terror began to spread fast from man to man. At that moment, the fiery cavalry of Laudohn, still fresh, rushed on the wavering ranks. Then followed an universal rout. Frederic himself was on the point of falling into the hands of the conquerors, and was with difficulty saved by a gallant officer, who, at the head of a handful of Hussars, made good diversion for a few minutes. Shattered in body, shattered in mind, the King reached that night a village which the Cossacks had plundered; and there, in a ruined and deserted farm-house, flung himself on a heap of straw. He had sent to Berlin a second despatch very different from the first:—"Let the royal family leave Berlin. Send the archives to Potsdam. The town may make terms with the enemy."

The defeat was, in truth, overwhelming. Of fifty thousand men who had that morning marched under the black eagles, not three thousand remained together. The King bethought him again of his corrosive sublimate, and wrote to bid adieu to his friends, and to give directions as to the measures to be taken in the event of his death:—"I have no resource left"—such is the language of one of his letters—"all is lost. I will not survive the ruin of my country. Farewell for ever."

But the mutual jealousies of the confederates prevented them from following up their victory. They lost a few days in loitering and squabbling; and a few days, improved by Frederic, were worth more than the years of other men. On the morning after the battle, he had got together eighteen thousand of his troops. Very soon his force amounted to thirty thousand. Guns were procured from the neighbouring fortresses; and there was again an army. Berlin was for the present safe; but calamities came pouring on the King in uninterrupted succession. One of his generals, with a large body of troops, was taken at Maxen; another was defeated at Meissen; and when

at length the campaign of 1759 closed, in the midst of a rigorous winter, the situation of Prussia appeared desperate. The only consoling circumstance was, that in the West, Ferdinand of Brunswick had been more fortunate than his master; and by a series of exploits, of which the battle of Minden was the most glorious, had removed all apprehension of danger on the side of France.

The fifth year was now about to commence. It seemed impossible that the Prussian territories, repeatedly devastated by hundreds of thousands of invaders, could longer support the contest. But the King carried on war as no European power has ever carried on war, except the Committee of Public Safety during the great agony of the French Revolution. He governed his kingdom as he would have governed a besieged town, not caring to what extent property was destroyed, or the pursuits of civil life suspended, so that he did but make head against the enemy. As long as there was a man left in Prussia, that man might carry a musket; as long as there was a horse left, that horse might draw artillery. The coin was debased, the civil functionaries were left unpaid; in some provinces civil government altogether ceased to exist. But there was still rye-bread and potatoes; there was still lead and gunpowder; and, while the means of sustaining and destroying life remained, Frederic was determined to fight it out to the very last.

The earliest part of the campaign of 1760 was unfavourable to him. Berlin was again occupied by the enemy. Great contributions were levied on the inhabitants, and the royal palace was plundered. But at length, after two years of calamity, victory came back to his arms. At Lignitz he gained a great battle over Laudohn; at Torgau, after a day of horrible carnage, he triumphed over Daun. The fifth year closed, and still the event was in suspense. In the countries where the war had raged, the misery and exhaustion were more appalling than ever; but still there left men and beasts, arms and food, and still Frederic fought on. In truth he had now been baited into savageness. His heart was ulcerated with hatred. The implacable resentment with which his enemies persecuted him, though originally provoked by his own unprincipled ambition, excited in him a thirst for vengeance which he did not even attempt to conceal. "It is hard," he says in one of his letters, "for a man to bear what I bear. I begin to feel that, as the Italians say, revenge is a pleasure for the gods. My philosophy is worn out by suffering. I am no saint, like those of whom we read in the legends; and I will own that I should die content if only I could first inflict a portion of the misery which I endure."

Borne up by such feelings, he struggled with various success, but constant glory, through the campaign of 1761. On the whole the result of this campaign was disastrous to Prussia. No great battle was gained by the enemy; but, in spite of the desperate bounds of the

hunted tiger, the circle of pursuers was fast closing round him. Laudohn had surprised the important fortress of Schweidnitz. With that fortress half of Silesia, and the command of the most important defiles through the mountains had been transferred to the Austrians. The Russians had overpowered the King's generals in Pomerania. The country was so completely desolated that he began, by his own confession, to look round him with blank despair, unable to imagine where recruits, horses, or provisions were to be found.

Just at this time, two great events brought on a complete change in the relations of almost all the powers of Europe. One of those events was the retirement of Mr. Pitt from office; the other was the death of the Empress Elizabeth of Russia.

The retirement of Pitt seemed to be an omen of utter ruin to the House of Brandenburg. His proud and vehement nature was incapable of anything that looked like either fear or treachery. He had often declared that, while he was in power, England should never make a peace of Utrecht, should never, for any selfish object, abandon an ally even in the last extremity of distress. The Continental war was his own war. He had been bold enough, he who in former times had attacked, with irresistible power of oratory, the Hanoverian policy of Cartaret, and the German subsidies of Newcastle, to declare that Hanover ought to be as dear to us as Hampshire, and that he would conquer America in Germany. He had fallen; and the power which he had exercised, not always with discretion, but always with vigour and genius, had devolved on a favourite who was the representative of the Tory party, of the party which had thwarted William, which had persecuted Marlborough, which had given up the Catalans to the vengeance of Philip of Anjou. To make peace with France, to shake off, with all, or more than all, the speed compatible with decency, every Continental connection, these were among the chief objects of the new Minister. The policy then followed inspired Frederic with an unjust, but deep and bitter aversion to the English name, and produced effects which are still felt throughout the civilised world. To that policy it was owing that, for some years later, England could not find on the whole Continent a single ally to stand by her, in her extreme need, against the House of Bourbon. To that policy it was owing that Frederic, alienated from England, was compelled to connect himself closely, during his later years, with Russia, and was induced to assist in that great crime, the fruitful parent of other great crimes, the first partition of Poland.

Scarcely had the retreat of Mr. Pitt deprived Prussia of her only friend, when the death of Elizabeth produced an entire revolution in the politics of the North. The Grand Duke Peter, her nephew, who now ascended the Russian throne, was not merely free from the prejudices which his aunt had entertained against Frederic, but was a

worshipper, a servile imitator of the great King. The days of the new Czar's government were few and evil, but sufficient to produce a change in the whole state of Christendom. He set the Prussian prisoners at liberty, fitted them out decently, and sent them back to their master; he withdrew his troops from the provinces which Elizabeth had decided on incorporating with her dominions; and he absolved all those Prussian subjects, who had been compelled to swear fealty to Russia, from their engagements.

Not content with concluding peace on terms favourable to Prussia, he solicited rank in the Prussian service, dressed himself in a Prussian uniform, wore the Black Eagle of Prussia on his breast, made preparations for visiting Prussia, in order to have an interview with the object of his idolatry, and actually sent fifteen thousand excellent troops to reinforce the shattered army of Frederic. Thus strengthened, the King speedily repaired the losses of the preceding year, reconquered Silesia, defeated Daun at Buckersdorf, invested and retook Schweidnitz, and, at the close of the year, presented to the forces of Maria Theresa a front as formidable as before the great reverses of 1759. Before the end of the campaign, his friend, the Emperor Peter, having, by a series of absurd insults to the institutions, manners, and feelings of his people, united them in hostility to his person and government, was deposed and murdered. The Empress, who, under the title of Catherine the Second, now assumed the supreme power, was by no means partial to Frederic, and refused to permit her troops to remain under his command. But she observed the peace made by her husband; and Prussia was no longer threatened by danger from the East.

England and France at the same time paired off together. They concluded a treaty, by which they bound themselves to observe neutrality with respect to the German war. Thus the coalitions on both sides were dissolved; and the original enemies, Austria and Prussia, remained alone confronting each other.

Austria had undoubtedly far greater means than Prussia, and was less exhausted by hostilities; yet it seemed hardly possible that Austria could effect alone what she had in vain attempted to effect when supported by France on the one side, and by Russia on the other. Danger also began to menace the Imperial house from another quarter. The Ottoman Porte held threatening language, and a hundred thousand Turks were mustered on the frontiers of Hungary. The proud and revengeful spirit of the Empress Queen at length gave way; and, in February 1763, the peace of Hubertsburg put an end to the conflict which had, during seven years, devastated Germany. The King ceded nothing. The whole Continent in arms had proved unable to tear Silesia from that iron grasp.

The war was over. Frederic was safe. His glory was beyond the

reach of envy. If he had not made conquests as vast as those of Alexander, of Cæsar, and of Napoleon, if he had not, on fields of battle, enjoyed the constant success of Marlborough and Wellington, he had yet given an example unrivalled in history of what capacity and resolution can effect against the greatest superiority of power, and the utmost spirit of fortune. He entered Berlin in triumph, after an absence of more than six years. The streets were brilliantly lighted up; and, as he passed along in an open carriage, with Ferdinand of Brunswick at his side, the multitude saluted him with loud praises and blessings. He was moved by those marks of attachment, and repeatedly exclaimed "Long live my dear people! Long live my children!" Yet, even in the midst of that gay spectacle, he could not but perceive everywhere the traces of destruction and decay. The city had been more than once plundered. The population had considerably diminished. Berlin, however, had suffered little when compared with most parts of the kingdom. The ruin of private fortunes, the distress of all ranks, was such as might appal the firmest mind. Almost every province had been the seat of war, and of war conducted with merciless ferocity. Clouds of Croats had descended on Silesia. Tens of thousands of Cossacks had been let loose on Pomerania and Brandenburg. The mere contributions levied by the invaders amounted, it was said, to more than a hundred millions of dollars; and the value of what they extorted was probably much less than the value of what they destroyed. The fields lay uncultivated. The very seed-corn had been devoured in the madness of hunger. Famine, and contagious maladies produced by famine, had swept away the herds and flocks; and there was reason to fear that a great pestilence among the human race was likely to follow in the train of that tremendous war. Near fifteen thousand houses had been burned to the ground. The population of the kingdom had in seven years decreased to the frightful extent of ten per cent. A sixth of the males capable of bearing arms had actually perished on the field of battle. In some districts, no labourers, except women, were seen in the fields at harvest-time. In others, the traveller passed shuddering through a succession of silent villages, in which not a single inhabitant remained. The currency had been debased; the authority of laws and magistrates had been suspended; the whole social system was deranged. For, during that convulsing struggle, everything that was not military violence was anarchy. Even the army was disorganized. Some great generals, and a crowd of excellent officers, had fallen, and it had been impossible to supply their place. The difficulty of finding recruits had, towards the close of the war, been so great, that selection and rejection was impossible. Whole battalions were composed of deserters or of prisoners. It was hardly to be hoped that thirty years of repose and industry would repair the ruin produced by seven years of havoc. One

consolatory circumstance, indeed, there was. No debt had been incurred. The burdens of the war had been terrible, almost insupportable; but no arrear was left to embarrass the finances in time of peace.

Here, for the present, we must pause. We have accompanied Frederick to the close of his career as a warrior. Possibly, when these *Memoirs* are completed, we may resume the consideration of his character, and give some account of his domestic and foreign policy, and of his private habits, during the many years of tranquillity which followed the Seven Years' War.

ESSAYS BY CARDINAL JOHN HENRY NEWMAN

(John Henry Newman, English Cardinal, son of a banker was born in 1801. Educated at a private school, at Trinity College and at Oxford, he was elected Fellow of the Oriel and later became a tutor. Losing his position because of disputes, he travelled abroad, returning to England and became leader of the Oxford Movement. He was a big influence in Oxford in the later years. Doubting the position of the Anglican Church, he joined the Roman communion in 1845. Ordained priest, he held various positions in England and became rector of the Catholic University, in Dublin, 1854. He wrote various works and finally was made cardinal, 1879. He died in the year 1890).

THE SCOPE AND NATURE UNIVERSITY EDUCATION

DISCOURSE I

THEOLOGY A BRANCH OF KNOWLEDGE

IN addressing myself, gentlemen, to the consideration of a question which has excited so much interest, and elicited so much discussion at the present day, as that of University Education, I feel some explanation is due from me for supposing, after such high ability and wide experience have been brought to bear upon it, that any field remains for the additional labours either of a disputant or of an inquirer. If, nevertheless, I still venture to ask permission to continue the discussion, already so protracted, it is because the subject of Liberal Education, and of the principles on which it must be conducted, has ever had a hold upon my own mind; and because I have lived the greater part of my life in a place which has all that time been occupied in a series of controversies among its inmates and with strangers, and of measures, experimental or definitive, bearing upon it. About fifty years since, the Protestant University, of which I was so long a member, after a century of inactivity, at length was roused, at a time when (as I may say) it was giving no education at all to the youth committed to its keeping, to a sense of the responsibilities which its profession and its station involved, and it presents to us the singular example of an heterogeneous and an independent body of men, setting

about a work of self-reformation, not from any pressure of public opinion, but because it was fitting and right to undertake it. Its initial efforts, begun and carried on amid many obstacles, were met from without, as often happens in such cases, by ungenerous and jealous criticisms, which, at the very moment that they were urged, were beginning to be unjust. Controversy did but bring out more clearly to its own apprehension the views on which its reformation was proceeding, and throw them into a philosophical form. The course of beneficial changes made progress, and what was at first but the result of individual energy and an act of the academical corporation, gradually became popular, and was taken up and carried out by the separate collegiate bodies, of which the University is composed. This was the first stage of the controversy. Years passed away, and then political adversaries arose against it, and the system of education which it had established was a second time assailed; but still, since that contest was conducted for the most part through the medium, not of political acts, but of treatises and pamphlets, it happened as before that the threatened dangers, in the course of their repulse, did but afford fuller development and more exact delineation to the principles of which the University was the representative.

In the former of these two controversies the charge brought against its studies was their remoteness from the occupations and duties of life, to which they are the formal introduction, or, in other words, their inutility; in the latter, it was their connection with a particular form of belief, or, in other words, their religious exclusiveness.

Living then so long as a witness, though hardly as an actor, in these scenes of intellectual conflict, I am able, gentlemen, to bear witness to views of University Education, without authority indeed in themselves, but not without value to a Catholic, and less familiar to him, as I conceive, than they deserve to be. And, while an argument originating in the controversies to which I have referred, may be serviceable at this season to that great cause in which we are here so especially interested, to me personally it will afford satisfaction of a peculiar kind; for, though it has been my lot for many years to take a prominent, sometimes a presumptuous, part in theological discussions, yet the natural turn of my mind carries me off to trains of thought like those which I am now about to open, which, important though they be for Catholic objects, and admitting of a Catholic treatment, are sheltered from the extreme delicacy and peril which attach to disputations directly bearing on the subject-matter of Divine Revelation.

There are several reasons why I should open the discussion with a reference to the lesson with which past years have supplied me. One reason is this: It would concern me, gentlemen, were I supposed to have got up my opinions for the occasion. This, indeed, would have

been no reflection on me personally, supposing I were persuaded of their truth, when at length addressing myself to the inquiry; but it would have destroyed, of course, the force of my testimony, and deprived such arguments, as I might adduce, of that moral persuasiveness which attends on tried and sustained conviction. It would have made me seem the advocate, rather than the cordial and deliberate maintainer and witness, of the doctrines which I was to support; and, though it might be said to evidence the faith I reposed in the practical judgment of the Church, and the intimate concurrence of my own reason with the course she had authoritatively sanctioned, and the devotion with which I could promptly put myself at her disposal, it would have cast suspicion on the validity of reasonings and conclusions which rested on no independent inquiry, and appealed to no past experience. In that case it might have been plausibly objected by opponents that I was the serviceable expedient of an emergency, and never could be more than ingenious and adroit in the management of an argument which was not my own, and which I was sure to forget again as readily as I had mastered it. But this is not so. The views to which I have referred have grown into my whole system of thought, and are, as it were, part of myself. Many changes has my mind gone through: here it has known no variation or vacillation of opinion, and though this by itself is no proof of truth, it puts a seal upon conviction and is a justification of earnestness and zeal. The principles, which I am now to set forth under the sanction of the Catholic Church, were my profession at that early period of my life, when religion was to me more a matter of feeling and experience than of faith. They did but take greater hold upon me, as I was introduced to the records of Christian Antiquity, and approached in sentiment and desire to Catholicism; and my sense of their truth has been increased with the events of every year since I have been brought within its pale.

And here I am brought to a second and more important reason for referring, on this occasion, to the conclusions at which Protestants have arrived on the subject of Liberal Education; and it is as follows: Let it be observed, then, that the principles on which I would conduct it are attainable, as I have already implied, by the mere experience of life. They do not come simply of theology; they imply no supernatural discernment; they have no special connection with Revelation; they almost arise out of the nature of the case; they are dictated by merely human prudence and wisdom, though a divine illumination be absent, and they are recognised by common sense, even where self-interest is not present to quicken it; and, therefore, though true, and just, and good in themselves, they imply nothing whatever as to the religious procession of those who maintain them. They may be held by Protestants as well as by Catholics; nay, there is reason to anticipate that in certain times and places they will be more thoroughly in-

vestigated, and better understood, and held more firmly by protestants than by ourselves.

It is natural to expect this from the very circumstance that the philosophy of Education is founded on truths in the natural order. Where the sun shines bright, in the warm climate of the south, the natives of the place know little of safeguards against cold and wet. They have, indeed, bleak and piercing blasts; they have chill and pouring rain, but only now and then, for a day or a week; they bear the inconvenience as they best may, but they have not made it an art to repel it; it is not worth their while; the science of calefaction and ventilation is reserved for the north. It is in this way that Catholics stand relatively to Protestants in the science of Education; Protestants depending on human means solely, are led to make the most of them: the sole resource is to use what they have; "Knowledge is" their "power" and nothing else; they are the anxious cultivators of a rugged soil. It is otherwise with us; "*funes ceciderunt mihi in præclaris.*" We have a goodly inheritance. This is apt to cause us (I do not mean to rely too much on prayer, and the Divine Blessing, for that is impossible; but) we sometimes forget that we shall please Him best, and get most from Him, when, according to the Fable, we "put our shoulder to the wheel," when we use what we have by nature to the utmost, at the same time that we look out for what is beyond nature in the confidence of faith and hope. However, we are sometimes tempted to let things take their course, as if they would in one way or another turn up right at last for certain; and so we go on, living from hand to mouth, getting into difficulties and getting out of them, succeeding certainly on the whole, but with failure in detail which might be avoided, and with much of imperfection or inferiority in our appointments and plans, and much disappointment, discouragement, and collision of opinion in consequence. If this be in any measure the state of the case, there is certainly so far a reason for availing ourselves of the investigations and experience of those who are not Catholics, when we have to address ourselves to the subject of Liberal Education.

Nor is there surely anything derogatory to the position of a Catholic in such a proceeding. The Church has ever appealed and deferred to witnesses and authorities external to herself, in those matters in which she thought they had means of forming a judgment: and that on the principle, *Cuique in sua arte credendum*. She has even used unbelievers and pagans in evidence of her truth, as far as their testimony went. She avails herself of scholars, critics, and antiquarians, who are not of her communion. She has worded her theological teaching in the phraseology of Aristotle; Aquila, Symmachus, Theodotian, Origen, Eusebius, and Apollinaris, all more or less heterodox, have supplied materials for primitive exegetics. St. Cyprian called Ter-

tullian his master; St. Augustin refers to Ticonius; Bossuet, in modern times, complimented the labours of the Anglican Bull; the Benedictine editors of the Fathers are familiar with the labours of Fell, Ussher, Pearson, and Beveridge. Pope Benedict XIV. cites according to the occasion the works of Protestants without reserve, and the late French collection of Christian Apologists contains the writings of Locke, Burnet, Tillotson, and Paley. If, then, I come forward in any degree as borrowing the views of certain Protestant schools on the point which is to be discussed, I do so, gentlemen, as believing, first, that the Catholic Church has ever, in the plenitude of her divine illumination, made use of whatever truth or wisdom she has found in their teaching or their measures; and next, that in particular times or places her children are likely to profit from external suggestions or lessons, which cannot be considered necessary for herself.

And here I may mention a third reason for appealing at the outset to the proceedings of Protestant bodies in regard to Liberal Education. It will serve to intimate the mode in which I propose to handle my subject altogether. Observe then, gentlemen, I have no intention, in anything I shall say, of bringing into the argument the authority of the Church, or any authority at all; but I shall consider the question simply on the grounds of human reason and human wisdom. I am investigating in the abstract, and am determining what is in itself right and true. For the moment I know nothing, so to say, of history. I take things as I find them; I have no concern with the past; I find myself here; I set myself to the duties I find here; I set myself to further, by every means in my power, doctrines and views, true in themselves, recognised by Catholics as such, familiar to my own mind; and to do this quite apart from the consideration of questions which have been determined without me and before me. I am here the advocate and the minister of a certain great principle; yet not merely advocate and minister, else had I not been here at all. It has been my previous keen sense and hearty reception of that principle, that has been at once the cause, as I must suppose, of my selection, and the ground of my acquiescence. I am told on authority that a principle is necessary, which I have ever felt to be true. And I argue in its behalf on its own merits, the authority, which brings me here, being my reason for arguing, but not the ground of my argument itself.

And a fourth reason is here suggested for consulting the history of Protestant institutions, when I am going to speak of the object and nature of University Education. It will serve to remind you, gentlemen, that I am concerned with questions, not of immutable truth, but of practice and expedience. It would ill have become me to undertake a subject, on which points of dispute have arisen among persons so far above me in authority and name, in relation to a state of society, about which I have so much to learn, if it involved an appeal to sacred

truth, or the determination of some imperative rule of conduct. It would have been presumptuous in me so to have acted, nor am I so acting. Even the question of the union of Theology with the secular Sciences, which is its religious side, simple as it is of solution in the abstract, has, according to difference of circumstances, been at different times differently decided. Necessity has no law, and experience is often one form of necessity. It is no principle with sensible men, of whatever cast of opinion, to do always what is abstractedly best. Where no direct duty forbids, we may be obliged to do, as being best under circumstances, what we murmur and rise against, while we do it. We see that to attempt more is to effect less; that we must accept so much, or gain nothing; and so perforce we reconcile ourselves to what we would have far otherwise, if we could. Thus a system of what is called Mixed Education, in which Theology and the Sciences are taught separately, may, in a particular place or time, be the least of evils; it may be of long standing; it may be dangerous to meddle with; it may be professedly a temporary arrangement; it may be under a process of improvement; its disadvantages may be neutralised by the persons by whom, or the provisions under which, it is administered.

Hence it was, that in the early ages the Church allowed her children to attend the heathen schools for the acquisition of secular accomplishments, where, as no one can doubt, evils existed, at least as great as can attend on Mixed Education now. The gravest Fathers recommend for Christian youth the use of Pagan masters; the most saintly Bishop and most authoritative Doctors had been sent in their adolescence by Christian parents to Pagan lecture halls. And, not to take other instances, at this very time, and in this very country, as regards at least the poorer classes of the community, whose secular acquirements ever must be limited, it has seemed best to the Irish Bishops, under the circumstances, to suffer the introduction into the country of a system of Mixed Education in the schools called National. Such a state of things, however, is passing away; as regards University education at least, the highest authority has now decided that the plan, which is abstractedly best, is in this time and country also most expedient.

This is the branch of my subject of which I propose first to enter, and I do so without further delay. It is one of the two questions, on which the Protestant controversies turned to which I have alluded. The earlier of them was the inutility of Oxford education, the latter was its exclusiveness; in the former it was debated whether Liberal Knowledge should have the foremost place in University teaching; in the latter, whether Theology should be excluded. I am to begin with the latter.

It is the fashion just now, gentlemen, as you very well know, to erect so-called Universities, without making any provision in them at all for Theological chairs. Institutions of this kind exist both here and in England. Such a procedure, though defended by writers of the generation just passed with much plausible argument and not a little wit, seems to me an intellectual absurdity; and my reason for saying so runs, with whatever abruptness, into the form of a syllogism:—A University, I should lay down, by its very name professes to teach universal knowledge: Theology is surely a branch of knowledge: how then is it possible to profess all branches of knowledge, and yet to exclude not the meanest, nor the narrowest, of the number? I do not see that either premiss of this argument is open to exception.

As to the range of University teaching, certainly the very name is inconsistent with restrictions of any kind. Whatever was the original reason of its adoption, which is unknown, I am only putting on its popular, its recognised sense, when I say that a University should teach universal knowledge. That there is a real necessity for this universal teaching in the highest schools of intellect, I will show by-and-by; here it is sufficient to say that such universality is considered by writers on the subject as the very characteristic of a University, as contrasted with other seats of learning. Thus Johnson, in his Dictionary, defines it to be “a school where all arts and faculties are taught;” and Mosheim, writing as an historian, says that, before the rise of the University of Paris,—for instance, at Padua, or Salamanca, or Cologne,—“the whole circle of sciences then known was not taught;” but that the school of Paris, “which exceeded all others in various respects, as well as in the number of teachers and students, was the first to embrace all the arts and sciences, and therefore first became a University.”

If, with other authors, we consider the word to be derived from the invitation which is held out by a University to students of every kind, the result is the same; for, if certain branches of knowledge were excluded, those students of course would be excluded also, who desired to pursue them.

Is it, then, logically consistent in a seat of learning to call itself a University, and to exclude Theology from the number of its studies? And again, is it wonderful that Catholics, even in the view of reason, putting aside faith or religious duty, should be dissatisfied with existing institutions, which profess to be Universities, and refuse to teach Theology; and that they should in consequence desire to possess seats of learning, which are, not only more Christian, but more philosophical in their construction, and larger and deeper in their provisions?

But this, of course, is to assume that Theology is a science, and an important one: so I will throw my argument into another form. I say, then, that if a University be, from the nature of the case, a

place of instruction, where universal knowledge is professed, and if in a certain University, so called, the subject of Religion is excluded, one of two conclusions is inevitable,—either, on the one hand, that the province of Religion is very barren of real knowledge, or, on the other hand, that in such University one special and important branch of knowledge is omitted. I say the advocate of such an institution must say this, or he must say that; he must own, either that little or nothing is known about the Supreme Being, or that his seat of learning calls itself what it is not. This is the thesis which I lay down, and on which I shall insist in the remainder of this Discourse. I repeat, such a compromise between religious parties, as is involved in the establishment of a University which makes no religious profession, implies that those parties severally consider,—not indeed that their own respective opinions are trifles in a moral and practical point of view—of course not; but certainly as much as this, that they are not knowledge. Did they in their hearts believe that their private views of religion, whatever they are, were absolutely and objectively true, it is inconceivable that they would so insult them as to consent to their omission in an Institution which is bound, from the nature of the case—from its idea and its name—to make a profession of all sorts of knowledge whatever.

I think this will be found to be no matter of words. I allow then fully, that, when men combine together for any common object, they are obliged, as a matter of course, in order to secure the advantages accruing from united action, to sacrifice many of their private opinions and wishes and to drop the minor differences, as they are commonly called, which exist between man and man. No two persons perhaps are to be found, however intimate, however congenial in tastes and judgments, however eager to have one heart and one soul, but must deny themselves, for the sake of each other, much which they like or desire, if they are to live together happily. Compromise, in a large sense of the word, is the first principle of combination; and any one who insists on enjoying his rights to the full, and his opinions without toleration for his neighbour's and his own way in things, will soon have all things altogether to himself, and no one to share them with him. But most true as this confessedly is. Still there is an obvious limit, on the other hand, to these compromises, necessary as they are; and this is found in the *proviso*, that the differences surrendered should be but “minor,” or that there should be no sacrifice of the main object of the combination, in the concessions which are mutually made. Any sacrifice which compromises that object is destructive of the principle of the combination, and no one who would be consistent can be a party to it.

Thus, for instance, if men of various religious denominations join together for the dissemination of what are called “evangelical” tracts,

it is under the belief that, the object of their uniting, as recognised on all hands, being the spiritual benefit of their neighbours, no religious exhortation, whatever be its character, can essentially interfere with that benefit, which is founded upon the Lutheran doctrine of Justification. If, again, they agree together in printing and circulating the Protestant Bible, it is because they, one and all, hold to the principle, that, however serious be their differences of religious sentiment, such differences fade away before one great principle, which that circulation symbolises—that the Bible, the whole Bible, and nothing but the Bible, is the religion of Protestants. On the contrary, if the committee of some such association inserted tracts into the copies of the said Bible which they sold, and tracts in recommendation of the Athanasian Creed or the merit of good works, I conceive any subscribing member would have a just right to complain of a proceeding, which compromised both the principle of Private Judgment and the doctrine of justification by Faith only. These instances are sufficient to illustrate my general position, that coalitions and comprehensions for an object, have their life in the prosecution of that object, and cease to have any meaning as soon as that object is compromised or disparaged.

When, then, a number of persons come forward, not as politicians, not as diplomatists, lawyers, traders, or speculators, but with the one object of advancing Universal Knowledge, much we may allow them to sacrifice—ambition, reputation, leisure, comfort, gold, one thing they may not sacrifice,—Knowledge itself. Knowledge being their object, they need not of course insist on their own private views about ancient or modern history, or national prosperity, or the balance of power; they need not of course shrink from the co-operation of those who hold the opposite views; but stipulate they must that Knowledge itself is not compromised;—and as to those views, of whatever kind, which they do allow to be dropped, it is plain they consider such to be opinions, and nothing more, however dear, however important to themselves personally; opinions ingenious, admirable, pleasurable, beneficial, expedient, but not worthy the name of Knowledge of Science. Thus no one would insist on the Malthusian teaching being a *sine quâ non* in a seat of learning, who did not think it simply ignorance not to be a Malthusian; and no one would consent to drop the Newtonian theory, who thought it to be proved true, in the same sense as the existence of the sun and moon is true. If, then, in an Institution which professes all knowledge, nothing is professed, nothing is taught about the Supreme Being, it is fair to infer that every individual in the number of those who advocate that Institution, supposing him consistent, distinctly holds that nothing is known for certain about the Supreme Being; nothing such, as to have any claim to be regarded as an accession to the stock of general

knowledge existing in the world. If, on the other hand, it turns out that something considerable is known about the Supreme Being, whether from Reason or Revelation, then the Institution in question professes every science, and yet leaves out the foremost of them. In a word, strong as may appear the assertion, I do not see how I can avoid making it, and bear with me, gentlemen, while I do so, viz., such an Institution cannot be what it professes, if there be a God. I do not wish to declaim; but by the very force of the terms, it is very plain, that a Divine Being and such a University cannot co-exist.

Still, however, this may seem to many an abrupt conclusion, and will not be acquiesced in: what answer, gentlemen, will be made to it? Perhaps this:—It will be said, that there are different kinds of spheres of Knowledge, human, divine, sensible, intellectual, and the like; and that a University certainly takes in all varieties of knowledge in its own line, but still that it has a line of its own. It contemplates, it occupies a certain order, a certain platform, of Knowledge. I understand the remark; but I own to you, gentlemen, I do not understand how it can be made to apply to the matter in hand. I cannot so construct my definition of the subject-matter of University Knowledge, and so draw my boundary lines around it, as to include therein the other sciences commonly studied at Universities, and to exclude the science of Religion. Are we to limit our idea of University Knowledge by the evidence of our senses? then we exclude history; by testimony? we exclude metaphysics; by abstract reasoning? we exclude physics. Is not the being of a God reported to us by testimony, handed down by history, inferred by an inductive process, brought home to us by metaphysical necessity, urged on us by the suggestions of our conscience? It is a truth in the natural order, as well as in the supernatural. So much for its origin; and, when obtained, what is it worth? Is it a great truth or a small one? Is it a comprehensive truth? Say that no other religious idea whatever were given but it, and you have enough to fill the mind; you have at once a whole dogmatic system. The word "God" is a Theology in itself, indivisibly one, inexhaustibly various, from the vastness and the simplicity of its meaning. Admit a God, and you introduce among the subjects of your knowledge, a fact encompassing, closing in upon, absorbing, every other fact conceivable. How can we investigate any part of any order of Knowledge, and stop short of that which enters into every order? All true principles run over with it, all phenomena converge to it; it is truly the First and the Last. In word indeed, and in idea, it is easy enough to divide Knowledge into human and divine, secular and religious, and to lay down that we will address ourselves to the one without interfering with the other; but it is impossible in fact. Granting that divine truth differs in kind

from human, so do human truths differ in kind one from another. If the knowledge of the Creator is in a different order from knowledge of the creature, so, in like manner, metaphysical science is in a different order from physical, physics from history, history from ethics. You will soon break up into fragments the whole circle of secular knowledge, if you begin the mutilation with divine.

I have been speaking simply of Natural Theology; my argument of course is stronger when I go on to Revelation. Let the doctrine of the Incarnation be true: is it not at once of the nature of an historical fact, and of a metaphysical? Let it be true that there are Angels; how is this not a point of knowledge in the same sense as the naturalist's asseveration, that there are myriads of living things on the point of a needle? That the Earth is to be burned by fire, is, if true, as large a fact as that huge monsters once played amid its depths; that Antichrist is to come, is as categorical a heading to a chapter of history, as that Nero or Julian was Emperor of Rome; that a divine influence moves the will, is a subject of thought not more mysterious than the result of volition on the animal frame, which we admit as a fact in metaphysics.

I do not see how it is possible for a philosophical mind, first, to believe these religious facts to be true; next, to consent to put them aside; and thirdly, in spite of this, to go on to profess to be teaching all the while *de omni scibili*. No; if a man thinks in his heart that these religious facts are short of truth, are not true in the sense in which the fall of a stone to the earth is true, I understand his excluding Religion from his University, though he professes other reasons for its exclusion. In that case the varieties of religious opinion under which he shelters his conduct, are not only his apology for publicly ignoring Religion, but a cause of his privately disbelieving it. He does not think that anything is known or can be known for certain, about the origin of the world or the end of man.

This, I fear, is the conclusion to which intellects, clear, logical, and consistent, have come, or are coming, from the nature of the case; and, alas! in addition to this *primâ facie* suspicion, there are actual tendencies in the same direction in Protestantism, viewed whether in its original idea, or again in the so-called Evangelical movement in these islands during the last century. The religious world, as it is styled, holds, generally speaking, that Religion consists, not in knowledge, but in feeling or sentiment. The old Catholic notion, which still lingers in the Established Church, was, that Faith was an intellectual act, its object truth, and its result knowledge. Thus if you look into the Anglican Prayer Book, you will find definite *credenda*, as well as definite *agenda*; but in proportion as the Lutheran leaven spread, it became fashionable to say that Faith was, not an acceptance of revealed doctrine, not an act of the in-

tellect, but a feeling, an emotion, an affection, an appetency; and, as this view of Faith obtained, so was the connection of Faith with Truth and knowledge more and more either forgotten or denied. At length the identity of this (so-called) spirituality of heart and the virtue of Faith was acknowledged on all hands. Some men indeed disapproved the pietism in question, others admired it; but whether they admired or disapproved, both the one party and the other found themselves in agreement on the main point, viz.—in considering that this really was in substance Religion, and nothing else; that Religion was based, not on argument, but on taste and sentiment, that nothing was objective, everything subjective, in doctrine. I say, even those who saw through the affectation in which the religious school of which I am speaking clad itself, still came to think that religion, as such, consisted in something short of intellectual exercises, viz., in the affections, in the imagination, in inward persuasions and consolations, in pleasurable sensations, sudden changes, and sublime fancies. They learned to believe and to take it for granted, that Religion was nothing beyond a supply of the wants of human nature, not an external fact and a work of God. There was, it appeared, a demand for Religion, and therefore there was a supply; human nature could not do without Religion, any more than it could do without bread; a supply was absolutely necessary, good or bad, and, as in the case of the articles of daily sustenance, an article which was really inferior was better than none at all. Thus Religion was useful, venerable, beautiful, the sanction of order, the stay of government, the curb of self-will and self-indulgence, which the laws cannot reach: but, after all, on what was it based? Why, that was a question delicate to ask, and imprudent to answer; but if the truth must be spoken, however reluctantly, the long and the short of the matter was this, that Religion was based on custom, on prejudice, on law, on education, on habit, on loyalty, on feudalism, on enlightened expedience, on many, many things, but not at all on reason; reason was neither its warrant, nor its instrument, and science had as little connection with it as with the fashions, or the state of the weather.

You see, gentlemen, how a theory or philosophy, which began with the religious changes of the sixteenth century, has led to conclusions, which the authors of those changes would be the first to denounce, and has been taken up by that large and influential body which goes by the name of Liberal or Latitudinarian; and how, where it prevails, it is as unreasonable of course to demand for Religion a chair in a University, as to demand one for fine feeling, sense of honour, patriotism, gratitude, maternal affection, or good companionship, proposals which would be simply unmeaning.

Now, in illustration of what I have been saying, I will appeal, in the first place, to a statement, but not merely so, to no mere politician,

no trader in places, or votes, or the stock market, but to a philosopher, to an orator, to one whose profession, whose aim, has ever been to cultivate the fair, the noble, and the generous. I cannot forget the celebrated discourse of the celebrated man to whom I am alluding; a man who is first in his peculiar walk; and who, moreover (which is much to my purpose), has had a share, as much as any one alive, in effecting the public recognition in these Islands of the principle of separating secular and religious knowledge. This brilliant thinker, during the years in which he was exerting himself in its behalf, made a speech or discourse, on occasion of a public solemnity; and in reference to the bearing of general knowledge upon religious belief, he spoke as follows:—

“As men,” he said, “will no longer suffer themselves to be led blindfold in ignorance, so will they no more yield to the vile principle of judging and treating their fellow-creatures, not according to the intrinsic merit of their actions, but according to the accidental and involuntary coincidence of their opinions. The great truth has finally gone forth to all the ends of the earth,” and he prints it in capital letters, “that man shall no more render account to man for his belief, over which he has himself no control. Henceforward, nothing shall prevail upon us to praise or to blame any one for that which he can no more change, than he can the hue of his skin or the height of his stature.” You see, gentlemen, if this philosopher is to decide the matter, religious ideas are just as far from being real, or representing anything beyond themselves, are as truly peculiarities, idiosyncrasies, accidents of the individual, as his having the stature of a Patagonian, of the features of a Negro.

But perhaps this was the rhetoric of an excited moment. Far from it, gentlemen, or I should not have fastened on the words of a fertile mind, uttered so long ago. What Mr. Brougham laid down as a principle in 1825, resounds on all sides of us, with ever-growing confidence and success, in 1852. I open the Minutes of the Committee of Council on Education for the years 1848-50, presented to both House of Parliament by command of Her Majesty, and I find one of Her Majesty’s Inspectors of Schools, at p. 467 of the second volume, dividing “the topics usually embraced in the better class of primary schools” into four:—the knowledge of signs, as reading and writing; of facts, as geography and astronomy; of relations and laws, as mathematics; and lastly sentiment, such as poetry and music. Now, on first catching sight of this division, it occurred to me to ask myself, before ascertaining the writer’s own resolution of the matter, under which of these four heads would fall Religion, or whether it fell under any of them. Did he put it aside as a thing too delicate and sacred to be enumerated with earthly studies? or did he distinctly contemplate it when he made his division? Anyhow, I could really

find a place for it under the first head, or the second, or the third;—for it has to do with facts, since it tells of the Self-subsisting; it has to do with relations, for it tells of the Creator; it has to do with signs, for it tells of the due manner of speaking of Him. There was just one head of the division to which I could not refer it, viz., to sentiment; for, I suppose, music and poetry, which are the writer's own examples of sentiment, have not much to do with Truth, which is the main object of Religion. Judge then my surprise, gentlemen, when I found the fourth was the very head selected by the writer of the Report in question, as the special receptacle of religious topics. "The inculcation of sentiment," he says, "embraces reading in its higher sense, poetry, music, together with moral and religious education." What can be clearer than that, in this writer's idea (whom I am far from introducing for his own sake, because I have no wish to hurt the feelings of the gentleman, who is but exerting himself zealously in the discharge of anxious duties; I do but introduce him as an illustration of the wide-spreading school of thought to which he belongs), what, I say, can more clearly prove than a candid avowal like this, that, in the view of that school, Religion is not knowledge, has nothing whatever to do with knowledge, and is excluded from a University course of instruction, not simply because the exclusion cannot be helped, from political or social obstacles, but because it has no business there at all, because it is to be considered a mere taste, sentiment, opinion, and nothing more?

The writer avows this conclusion himself, in the explanation into which he presently enters, in which he says: "According to the classification proposed, the essential idea of all religious Education will consist in the direct cultivation of the feelings." What we contemplate, then, what we aim at, when we give a religious Education, is, it seems, not to impart any knowledge whatever, but to satisfy anyhow desires which will arise after the Unseen in spite of us, to provide the mind with a means of self-command, to impress on it the beautiful ideas which saints and sages have struck out, to embellish it with the bright hues of a celestial piety, to teach it the poetry of devotion, the music of well-ordered affections, and the luxury of doing good. As for the intellect, its exercise happens to be unavoidable, whenever moral impressions are made, from the constitution of the human mind, and it varies in its conclusions with the peculiarities of the individual. Something like this seems to be the writer's meaning, but we need not pry into its finer issues in order to gain a distinct view of its general bearing; and taking it, as I think we fairly may take it, as a specimen of the philosophy of the day, as adopted by those who are not conscious unbelievers, or open scoffers, I consider it amply explains how it comes to pass that this day's philosophy sets up a system of universal knowledge, and teaches of

plants, and earth, and creeping things, and beasts, and gases, about the crust of the earth and the changes of the atmosphere, about sun, moon, and stars, about man and his doings, about the history of the world, about sensation, memory, and the passions, about duty, about cause and effect, about all things imaginable, except one—and that is, about Him that made all things, about God. I say the reason is plain because they consider knowledge, as regards the creature, is illimitable, but impossible or helpless as regards the being and attributes and works of the Creator.

Here, however, it may be objected to me that this representation is certainly extreme, for the school in question does, in fact, lay great stress on the evidence afforded by the creation, to the Being and Attributes of the Creator. I may be referred, for instance, to the words of one of the speakers on a memorable occasion. At the very time of laying the first stone of the University of London, I confess it, a learned person, since elevated to the Protestant See of Durham, which he still fills, opened the proceedings with prayer. He addressed the Deity, as the authoritative Report informs us, "the whole surrounding assembly standing uncovered in solemn silence." "Thou," he said, in the name of all present, "Thou hast constructed the vast fabric of the universe in so wonderful a manner, so arranged its motions, and so formed its productions, that the contemplation and study of Thy works exercise at once the mind in the pursuit of human science, and lead it onwards to Divine truth." Here is apparently a distinct recognition that there is such a thing as Truth in the province of Religion; and, did the passage stand by itself, and were it the only means we possessed of ascertaining the sentiments of the powerful body whom this distinguished person there represented, it would, as far as it goes, be satisfactory. I admit it; and I admit also the recognition of the Being and certain Attributes of the Deity, contained in the writings of the gifted person whom I have already quoted, whose genius, versatile and multiform as it is, in nothing has been so constant, as in its devotion to the advancement of knowledge, scientific and literary. He then, in his "Discourse of the objects, advantages, and pleasures of science," after variously illustrating what he terms its "gratifying treats," crowns the catalogue with mention of "the highest of all our gratifications in the contemplation of science," which he proceeds to explain thus:—

"We are raised by them," says he, "to an understanding of the infinite wisdom and goodness which the Creator has displayed in all His works. Not a step can be taken in any direction," he continues, "without perceiving the most extraordinary traces of design; and the skill, everywhere conspicuous, is calculated in so vast a proportion of instances to promote the happiness of living creatures, and especially of ourselves, that we can feel no hesitation in concluding, that,

if we know the whole scheme of Providence, every part would be in harmony with a plan of absolute benevolence. Independent, however, of this most consoling inference, the delight is inexpressible, of being able to follow, as it were, with our eyes, the marvellous works of the Great Architect of Nature, to trace the unbounded power and exquisite skill which are exhibited in the most minute, as well as the mightiest parts of His system. The pleasure derived from this study is unceasing, and so various, that it never tires the appetite. But it is unlike the low gratifications of sense in another respect: it elevates and refines our nature, while those hurt the health, debase the understanding, and corrupt the feelings; it teaches us to look upon all earthly objects as insignificant and below our notice, except the pursuit of knowledge and the cultivation of virtue, that is to say, the strict performance of our duty in every relation of society; and it gives a dignity and importance to the enjoyment of life, which the frivolous and the grovelling cannot even comprehend."

Such are the words of this prominent champion of Mixed Education. If logical inference be, as it undoubtedly is, an instrument of truth, surely, it may be answered to me, in admitting the possibility of inferring the Divine Being and Attributes from the phenomena of nature, he distinctly admits a basis of truth for the doctrines of Religion.

I wish, gentlemen, to give these representations their full weight, both from the gravity of the question, and the consideration due to the persons whom I am arraigning; but, before I can feel sure I understand them, I must ask an abrupt question. When I am told, then, by the partisans of Universities without Theological teaching, that human science leads to belief in a Supreme Being, without denying the fact, nay, as a Catholic, with full conviction of it, nevertheless I am obliged to ask the statement means in their mouths, what they, the speakers, understand by the word "God." Let me not be thought offensive, if I question, whether it means the same thing on the two sides of the controversy. With us Catholics, as with the first race of Protestants, as with Mahometans, and all Theists, the word contains, as I have already said, a theology in itself. At the risk of anticipating what I shall have occasion to insist upon in my next Discourse, let me say that, according to the teaching of Monotheism, God is an Individual, Self-dependent, All-perfect, Unchangeable Being; intelligent, living personal, and present; almighty, all-seeing, all-remembering; between whom and His creatures there is an infinite gulf; who has no origin, who is all-sufficient for Himself; who created and upholds the universe; who will judge every one of us, sooner or later, according to that Law of right and wrong which He has written on our hearts. He is One who is sovereign over, operative amidst, independent of, the appointments which He has made; One in whose

hands are all things, who has a purpose in every event, and a standard for every deed, and thus has relations of His own towards the subject-matter of each particular science which the book of knowledge unfolds; who has with an adorable, never-ceasing energy mixed Himself up with all the history of creation, the constitution of nature, the course of the world, the origin of society, the fortunes of nations, the action of the human mind; and who thereby necessarily becomes the subject-matter of a science, far wider and more noble than any of those which are included in the circle of secular Education.

This is the doctrine which belief in a God implies: if it means anything, it means all this, and cannot keep from meaning all this, and a great deal more; and, even though there were nothing in the religious tenets of the last three centuries to disparage dogmatic truth, still, even then, I should have difficulty in believing that a doctrine so mysterious, so peremptory, approved itself as a matter of course to educated men of this day, who gave their minds attentively to consider it. Rather, in a state of society such as ours, in which authority, prescription, tradition, habit, moral instinct, and the divine influences go for nothing, in which patience of thought, and depth and consistency of view, are scorned as subtle and scholastic, in which free discussion and fallible judgment are prized as the birthright of each individual, I must be excused if I exercise towards this age, as regards its belief in this doctrine, some portion of that scepticism which it exercises itself towards every received but unscrutinised assertion whatever. I cannot take it for granted, I must have it brought home to me by tangible evidence, that the spirit of the age means by the Supreme Being what Catholics mean. Nay, it would be a relief to my mind to gain some ground of assurance, that the parties influenced by that spirit had, I will not say, a true apprehension of God, but even so much as the idea of what a true apprehension is.

Nothing is easier than to use the word, and mean nothing by it. The heathens used to say, "God wills," when they meant "Fate"; "God provides," when they meant "Chance"; "God acts," when they meant "Instinct" or "Sense"; and "God is everywhere," when they meant "the Soul of Nature." The Almighty is something infinitely different from a principle, or a centre of action, or a quality, or a generalisation of phenomena. If, then, by the word, you do but mean a Being who has contrived the world and keeps it in order, who acts in it, but only in the way of general Providence, who acts towards us but only through what are called laws of Nature, who is more certain not to act at all than to act independent of those laws, who is known and approached indeed, but only through the medium of those laws; such a God it is not difficult for any one to conceive, not difficult for any one to endure. If, I say, as you would revolutionise society, so you would revolutionise heaven, if you have changed the divine

sovereignty into a sort of constitutional monarchy, in which the Throne has honour and ceremonial enough, but cannot issue the most ordinary command except through legal forms and precedents, and with the counter-signature of a minister, then belief in a God is no more than an acknowledgment of existing, sensible powers and phenomena, which none but an idiot can deny. If the Supreme Being is powerful or skillful, just so far forth as the telescope shows power, and the microscope shows skill, if His moral law is to be ascertained simply by the physical processes of the animal frame, or His will gathered from the immediate issues of human affairs, if His Essence is just as high and deep and broad and long as the universe, and no more; if this be the fact, then will I confess that there is no specific science about God, that Theology is but a name, and a protest in its behalf an hypocrisy. Then is He but coincident with the laws of the universe; then is He but a function, or correlative, or subjective reflection and mental impression of each phenomenon of the material or moral world, as it flits before us. Then, pious as it is to think of Him, while the pageant of experiment or abstract reasoning passes by, still, such piety is nothing more than a poetry of thought or an ornament of language, and has not even an infinitesimal influence upon philosophy or science, of which it is rather the parasitical production. I understand, in that case, why Theology should require no specific teaching, for there is nothing to mistake about; why it is powerless against scientific anticipations, for it merely is one of them; why it is simply absurd in its denunciations of heresy, for heresy does not lie in the region of fact and experiment. I understand, in that case, how it is that the religious sense is but a "sentiment," and its exercise a "gratifying treat," for it is like the sense of the beautiful or the sublime. I understand how the contemplation of the universe "leads onwards to divine truth," for divine truth is not something separate from Nature, but it is Nature a divine glow upon it. I understand the zeal expressed for Natural Theology, for this study is but a mode of looking at Nature, a certain view taken of Nature, private and personal, which one man has, and another has not, which gifted minds strike out, which others see to be admirable and ingenious, and which all would be the better for adopting. It is but the theology of Nature, just as we talk of the philosophy or the romance of history, or the poetry of childhood, or the picturesque, or the sentimental, or the humorous, or any other abstract quality, which the genius or the caprice of the individual, or the fashion of the day, or the consent of the world, recognises in any set of objects which are subjected to its contemplation.

Such ideas of religion seem to me short of Monotheism; I do not impute them to this or that individual who belongs to the school which gives them currency; but what I read about the "gratification" of

keeping pace in our scientific researches with "the Architect of Nature"; about the said gratification "giving a dignity and importance to the enjoyment of life," and teaches us that knowledge and our duties to society are the only earthly objects worth our notice, all this, I own it, gentlemen, frightens me; nor is Dr. Maltby's address to the Deity sufficient to reassure me. I do not see much difference between avowing that there is no God, and implying that nothing definite can for certain be known about Him; and when I find Religious Education treated as the cultivation of sentiment, and Religious Belief as the accidental hue or posture of the mind, I am reluctantly but forcibly reminded of a very unpleasant page of Metaphysics, viz., of the relations between God and Nature insinuated by such philosophers as Hume. This acute, though most low-minded of speculators, in his inquiry concerning the Human Understanding, introduces, as is well known, Epicurus, that is, a teacher of atheism, delivering an harangue to the Athenian people, not indeed in defence, but in extenuation of that opinion. His object is to show that, whereas the atheistic view is nothing else than the repudiation of theory, and an accurate representation of phenomenon and fact, it cannot be dangerous, unless phenomenon and fact be dangerous. Epicurus is made to say, that the paralogism of philosophy has ever been that of arguing from Nature in behalf of something beyond Nature, greater than Nature; whereas God, as he maintains, being known only through the visible world, our knowledge of Him is absolutely commensurate with our knowledge of it—is nothing distinct from it—is but a mode of viewing it. Hence it follows that, provided we admit, as we cannot help admitting, the phenomena of Nature and the world, it is only a question of words whether or not we go on to the hypothesis of a second Being, not visible but immaterial, parallel and coincident with Nature, to whom we give the name of God. "Allowing," he says, "the gods to be the authors of the existence or order of the universe, it follows that they possess that precise degree of power, intelligence, and benevolence, which appears in their workmanship; but nothing further can be proved, except we call in the assistance of exaggeration and flattery to supply the defects of argument and reasoning. So far as the traces of any attributes, at present, appear, so far may we conclude these attributes to exist. The supposition of further attributes is mere hypothesis; much more the supposition that, in distant periods of place and time, there has been, or will be, a more magnificent display of these attributes, and a scheme of administration more suitable to such imaginary virtues."

Here is a reasoner, who would not hesitate to deny that there is any distinct science of philosophy possible concerning the Supreme Being; since every single thing we know of Him is this or that of the other phenomenon, material or moral, which already falls under this

or that natural science.' In him then it would be only consistent to drop Theology in a course of University Education: but how is it consistent in any one who shrinks from his companionship? I am glad to see that the author, several times mentioned, is in opposition to Hume, in one sentence of the quotation I have made from his Discourse upon Science, deciding, as he does, that the phenomena of the material world are insufficient for the full exhibition of the Divine Attributes, and implying that they require a supplemental process to complete and harmonise their evidence. But is not this supplemental process a science? and if so, why not acknowledge its existence! If God is more than Nature, Theology claims a place among the sciences: but, on the other hand, if you are not sure of as much as this, how do you differ from Hume or Epicurus?

I end then as I began: religious doctrine is knowledge. This is the important truth, little entered into at this day, which I wish that all who have honored me with their presence here would allow me to beg them to take away with them. I am not catching at sharp arguments, but laying down grave principles. Religious doctrine is knowledge, in as full a sense as Newton's doctrine is knowledge. University Education without Theology is simply unphilosophical. Theology has at least as good a right to claim a place there as Astronomy.

EMERSON'S ESSAYS

(Ralph Waldo Emerson, our own philosopher and poet was born in Boston, May 25, 1803. He was the son of Rev. William Emerson, a Unitarian clergyman. Studying at the Boston Latin School he later graduated from Harvard, where he had been the class poet. After teaching school in Boston he studied for the ministry and was later elected minister of the Second Unitarian Church in Boston. Resigning he travelled abroad where he met Landor, Coleridge and other noted men, becoming intimate with Thomas Carlyle. Returning to America he settled in Concord, Massachusetts, where he prepared his famous lectures. His "Nature", 1836 was rewarded as an important work and his later works. "Concord Hymn", and "The American Scholar" increased his reputation. His later works further increased his reputation and popularity and when he died in 1882, he was regarded as one of America's leading poets and essayists.)

NATURE

A subtle chain of countless rings
The next unto the farthest brings;
The eye reads omens where it goes,
And speaks all languages the rose;
And, striving to be man, the worm
Mounts through all the spires of form.

INTRODUCTION

OUR age is retrospective. It builds the sepulchres of the fathers. It writes biographies, histories, and criticism. The foregoing generations beheld God and nature face to face; we, through their eyes. Why should not we also enjoy an original relation to the universe? Why should not we have a poetry and philosophy of insight and not of tradition, and a religion by revelation to us, and not the history of theirs? Embosomed for a season in nature, whose floods of life stream around and through us, and invite us by the powers they supply, to action proportioned to nature, why should we grope among the dry bones of the past, or put the living generation into masquerade out of its faded wardrobe? The sun shines to-day also. There is more wool and flax in the fields. There are new lands, new men, new thoughts. Let us demand our own works and laws and worship.

Undoubtedly we have no questions to ask which are unanswerable. We must trust the perfection of the creation so far, as to believe that whatever curiosity the order of things has awakened in our minds, the order of things can satisfy. Every man's condition is a solution in hieroglyphic to these inquiries he would put. He acts it as life, before he apprehends it as truth. In like manner, nature is already, in its forms and tendencies, describing its own design. Let us interrogate the great apparition, that shines so peacefully around us. Let us inquire to what end is nature?

All science has one aim, namely, to find a theory of nature. We have theories of races and of functions, but yet a remote approach to an idea of creation. We are now so far from the road to truth that religious teachers dispute and hate each other, and speculative men are esteemed unsound and frivolous. But to a sound judgment, the most abstract truth is the most practical. Whenever a true theory appears, it will be its own evidence. Its test is, that it will explain all phenomena. Now many are thought not only unexplained but inexplicable; as language, sleep, madness, dreams, beasts, sex.

Philosophically considered, the universe is composed of Nature and the Soul. Strictly speaking, therefore, all that is separate from us, all which Philosophy distinguishes as the NOT ME, that is, both nature and art, all other men and my own body, must be ranked under this name, NATURE. In enumerating the values of nature and casting up their sum, I shall use the word in both senses—in its common and in its philosophical import. In inquiries so general as our present one, the inaccuracy is not material; no confusion of thought will occur. Nature, in the common sense, refers to essences unchanged by man; space, the air, the river, the leaf. Art is applied to the mixture of his will with the same things, as in a house, a canal, a statue, a picture. But his operations taken together are so insignificant, a little chipping, baking, patching, and washing, that in an impression so grand as that of the world on the human mind, they do not vary the result.

I.—NATURE

To go into solitude, a man needs to retire as much from his chamber as from society. I am not solitary whilst I read and write, though nobody is with me. But if a man would be alone, let him look at the stars. The rays that come from those heavenly worlds, will separate between him and what he touches. One might think the atmosphere was made transparent with this design, to give man, in the heavenly bodies, the perpetual presence of the sublime. Seen in the streets of cities, how great they are! If the stars should appear one night in a thousand years, how would men believe and

adore; and preserve for many generations the remembrance of the city of God which had been shown! But every night come out these envoys of beauty, and light the universe with their admonishing smile.

The stars awaken a certain reverence, because, though always present, they are inaccessible; but all natural objects make a kindred impression, when the mind is open to their influence. Nature never wears a mean appearance. Neither does the wisest man extort her secret, and lose his curiosity by finding out all her perfection. Nature never became a toy to a wise spirit. The flowers, the animals, the mountains, reflected the wisdom of his best hour, as much as they had delighted the simplicity of his childhood.

When we speak of nature in this manner, we have a distinct but most poetical sense in the mind. We mean the integrity of impression made by manifold natural objects. It is this which distinguishes the stick of timber of the wood-cutter, from the tree of the poet. The charming landscape which I saw this morning, is indubitably made up of some twenty or thirty farms. Miller owns this field, Locke that, and Manning the woodland beyond. But none of them owns the landscape. There is a property in the horizon which no man has but he whose eye can integrate all the parts, that is, the poet. This is the best part of these men's farms, yet to this their warranty-deeds give no title.

To speak truly, few adult persons can see nature. Most persons do not see the sun. At least they have a very superficial seeing. The sun illuminates only the eye of the man, but shines into the eye and the heart of the child. The lover of nature is he whose inward and outward senses are still truly adjusted to each other; who has retained the spirit of infancy even into the era of manhood. His intercourse with heaven and earth becomes part of his daily food. In the presence of nature, a wild delight runs through the man, in spite of real sorrows. Nature says,—he is my creature, and maugre all his impertinent griefs, he shall be glad with me. Not the sun or the summer alone, but every hour and season yields its tribute of delight: for every hour and change corresponds to and authorises a different state of the mind, from breathless noon to grimmest midnight. Nature is a setting that fits equally well a comic or a mourning piece. In good health, the air is a cordial of incredible virtue. Crossing a bare common, in snow puddles, at twilight, under a clouded sky, without having in my thoughts any occurrence of special good fortune, I have enjoyed a perfect exhilaration. I am glad to the brink of fear. In the woods too, a man casts off his years, as the snake his slough, and at what period soever of life, is always a child. In the woods is perpetual youth. Within these plantations of God, a decorum and sanctity reign, a perennial festival is dressed, and the guest sees

not how he should tire of them in a thousand years. In the woods, we return to reason and faith. There I feel that nothing can befall me in life—no disgrace, no calamity (leaving me my eyes), which nature cannot repair. Standing on the bare ground—my head bathed by the blithe air, and uplifted into infinite space—all mean egotism vanishes. I become a transparent eye-ball; I am nothing; I see all; the currents of the Universal Being circulate through me; I am part or parcel of God. The name of the nearest friend sounds then foreign and accidental: to be brothers, to be acquaintances—master or servant, is then a trifle and a disturbance. I am the lover of uncontained and immortal beauty. In the wilderness, I find something more dear and connate than in streets or villages. In the tranquil landscape, and especially in the distant line of the horizon, man beholds somewhat as beautiful as his own nature.

The greatest delight which the fields and woods minister, is the suggestion of an occult relation between man and the vegetable. I am not alone and unacknowledged. They nod to me, and I to them. The waving of the boughs in the storm, is new to me and old. It takes me by surprise, and yet is not unknown. Its effect is like that of a higher thought or a better emotion coming over me, when I deemed I was thinking justly or doing right.

Yet it is certain that the power to produce this delight does not reside in nature, but in man, or in harmony of both. It is necessary to use these pleasures with great temperance. For, nature is not always tricked in holiday attire, but the same scene which yesterday breathed perfume and glittered as for the frolic of the nymphs, is overspread with melancholy today. Nature always wears the colours of the spirit. To a man labouring under calamity, the heat of his own fire hath sadness in it. Then, there is a kind of contempt of the landscape felt by him who has just lost by death a dear friend. The sky is less grand as it shuts down over less worth in the population.

II.—COMMODITY

WHOEVER considers the final cause of the world, will discern a multitude of uses that enter as parts into that result. They all admit of being thrown into one of the following classes: Commodity; Beauty; Language; and Discipline.

Under the general name of commodity, I rank all those advantages which our senses owe to nature. This, of course, is a benefit which is temporary and mediate, not ultimate, like its service to the soul. Yet, although low, it is perfect in its kind, and is the only use of nature which all men apprehend. The misery of man appears like childish petulance, when we explore the steady and prodigal provision that has been made for his support and delight on this green

ball which floats him through the heavens. What angels invented these splendid ornaments, these rich conveniences, this ocean of air above, this ocean of water beneath, this firmament of earth between? this zodiac of lights, this tent of dropping clouds, this striped coat of climates, this fourfold year? Beasts, fire, water, stones, and corn, serve him. The field is at once his floor, his work-yard, his play-ground, his garden, and his bed.

"More servants wait on man
Than he'll take notice of."

Nature, in its ministry to man, is not only the material, but is also the process and the result. All the parts incessantly work into each other's hands for the profit of man. The wind sows the seed; the sun evaporates the sea; the wind blows the vapour to the field; the ice, on the other side of the planet, condenses rain on this; the rain feeds the plant; the plant feeds the animal: and thus the endless circulations of the divine charity nourish man.

The useful arts are reproductions or new combinations by the wit of man, of the same natural benefactors. He no longer waits for favouring gales, but by means of steam, he realises the fable of Æolus's bag, and carries the two and thirty winds in the boiler of his boat. To diminish friction, he paves the road with iron bars, and, mounting a coach with a ship-load of men, animals, and merchandise behind him, he darts through the country, from town to town, like an eagle or a swallow through the air. By the aggregate of these aids, how is the face of the world changed, from the era of Noah to that of Napoleon! The private poor man hath cities, ships, canals, bridges, built for him. He goes to the post-office, and the human race run on his errands; to the book-shop, and the human race read and write of all that happens, for him; to the court-house, and nations repair his wrongs. He sets his house upon the road, and the human race go forth every morning, and shovel out the snow, and cut a path for him.

But there is no need of specifying particulars in this class of uses. The catalogue is endless, and the examples so obvious, that I shall leave them to the reader's reflection, with the general remark, that this mercenary benefit is one which has respect to a farther good. A man is fed, not that he may be fed, but that he may work.

III.—BEAUTY

A NOBLER want of man is served by nature, namely, the love of Beauty.

The ancient Greeks called the world *κοσμος*, beauty. Such is the constitution of all things, or such the plastic power of the human

eye, that the primary forms, as the sky, the mountain, the tree, the animal, give us a delight in and for themselves; a pleasure arising from outline, colour, motion, and grouping. This seems partly owing to the eye itself. The eye is the best of artists. By the mutual action of its structure and of the laws of light, perspective is produced, which integrates every mass of objects, of what character soever, into a well-coloured and shaded globe, so that where the particular objects are mean and unaffecting, the landscape which they compose is round and symmetrical. And as the eye is the best composer, so light is the first of painters. There is no object so foul that intense light will not make beautiful. And the stimulus it affords to the sense, and a sort of infinitude which it hath, like space and time, makes all matter gay. Even the corpse has its own beauty. But besides this general grace diffused over nature, almost all the individual forms are agreeable to the eye, as is proved by our endless imitations of some of them, as the acorn, the grape, the pine-cone, the wheat-ear, the egg, the wings and forms of most birds, the lion's claw, the serpent, the butterfly, seashells, flames, clouds, buds, leaves, and the forms of many trees, as the palm.

For better consideration, we may distribute the aspects of Beauty in a threefold manner.

1. First, the simple perception of natural forms is a delight. The influence of the forms and actions in nature is so needful to man, that, in its lowest functions, it seems to lie on the confines of commodity and beauty. To the body and mind which have been cramped by noxious work or company, nature is medicinal and restores their tone. The tradesman, the attorney, comes out of the din and craft of the streets, and sees the sky and the woods, and is a man again. In their eternal calm he finds himself. The health of the eye seems to demand a horizon. We are never tired, so long as we can see far enough.

But in other hours, Nature satisfies by its loveliness, and without any mixture of corporeal benefit. I see the spectacle of morning from the hill-top over against my house, from daybreak to sunrise, with emotions which an angel might share. The long slender bars of cloud float like fishes in the sea of crimson light. From the earth, as a shore, I look out into that silent sea. I seem to partake its rapid transformations: the active enchantment reaches my dust, and I dilate and conspire with the morning wind. How does Nature deify us with a few and cheap elements! Give me health and a day, and I will make the pomp of emperors ridiculous. The dawn is my Assyria; the sunset and moonrise by Paphos, and unimaginable realms of faerie; broad noon shall be my England of the senses and the understanding; the night shall be my Germany of mystic philosophy and dreams.

Not less excellent, except for our less susceptibility in the afternoon, was the charm, last evening, of a January sunset. The western clouds divided and subdivided themselves into pink flakes modulated with tints of unspeakable softness; and the air had so much life and sweetness, that it was a pain to come within doors. What was it that nature would say? Was there no meaning in the live repose of the valley behind the mill, and which Homer or Shakespeare could not re-form for me in words? The leafless trees become spires of flame in the sunset, with the blue east for their background, and the stars of the dead calices of flowers, and every withered stem and stubble rimmed with forest, contribute something to the mute music.

The inhabitants of cities suppose that the country landscape is pleasant only half the year. I please myself with the graces of the winter scenery, and believe that we are as much touched by it as by the genial influences of summer. To the attentive eye, each moment of the year has its own beauty; and in the same field, it beholds, every hour, a picture which was never seen before, and which shall never be seen again. The heavens change every moment, and reflect their glory or gloom on the plains beneath. The state of the crop in the surrounding farms alters the expression of the earth from roadsides, which makes the silent clock by which time tells the summer hours, will make even the divisions of the day sensible to a keen observer. The tribes of birds and insects, like the plants, punctual to their time, follow each other, and the year has room for all. By week to week. The succession of native plants in the pastures and water-courses the variety is greater. In July, the blue pontederia or pickerel-weed blooms in large beds in the shallow parts of our pleasant river, and swarms with yellow butterflies in continual motion. Art cannot rival this pomp of purple and gold. Indeed the river is a perpetual gala, and boasts each month a new ornament.

But this beauty of Nature which is seen and felt as beauty, is the least part. The shows of day, the dewy morning, the rainbow, mountains, orchards in blossom, stars, moonlight, shadows in still water and the like, if too eagerly hunted, become shows merely, and mock us with their unreality. Go out of the house to see the moon, and 'tis mere tinsel; it will not please as when its light shines upon your necessary journey. The beauty that shimmers in the yellow afternoons of October, who ever could clutch it? Go forth to find it, and it is gone; 'tis only a mirage as you look from the windows of diligence.

2. The presence of a higher, namely, of the spiritual element is essential to its perfection. The high and divine beauty which can be loved without effeminacy, is that which is found in combination with the human will. Beauty is the mark God sets upon virtue. Every natural action is graceful. Every heroic act is also decent, and

causes the place and the bystanders to shine. We are taught by great actions that the universe is the property of every individual in it. Every rational creature has all nature for his dowry and estate. It is his, if he will. He may divest himself of it; he may creep into a corner, and abdicate his kingdom, as most men do, but he is entitled to the world by his constitution. In proportion to the energy of his thought and will, he takes up the world into himself. "All those things for which men plough, build, or sail, obey virtue," said Sallust. "The winds and waves," said Gibbon, "are always on the side of the ablest navigators." So are the sun and moon and all the stars of heaven. When a noble act is done,—perchance in a scene of great natural beauty; when Leonidas and his three hundred martyrs consume one day in dying, and the sun and moon come each and look at them once in the steep defile of Thermopylæ; when Arnold Winkelried, in the high Alps, under the shadow of the avalanche, gathers in his side a sheaf of Austrian spears to break the line for his comrades; are not these heroes entitled to add the beauty of the scene to the beauty of the deed? When the bark of Columbus nears the shore of America;—before it, the beach lined with savages, fleeing out of all their huts of cane; the sea behind; and the purple mountains of the Indian Archipelago around, can we separate the man from the living picture? Does not the New World clothe his form with her palm-groves and savannahs as fit drapery? Ever does natural beauty steal in like air, and envelope great actions. When Sir Harry Vane was dragged up the Tower Hill, sitting on a sled, to suffer death, as the champion of the English laws, one of the multitude cried out to him, "You never sate on so glorious a seat." Charles II., to intimidate the citizens of London, caused the patriot Lord Russell to be drawn in an open coach, through the principal streets of the city, on his way to the scaffold. "But," his biographer says, "the multitude imagined they saw liberty and virtue sitting by his side." In private places, among sordid objects, an act of truth or heroism seems at once to draw to itself the sky as its temple, the sun as its cradle. Nature stretches out her arms to embrace man, only let his thoughts be of equal greatness. Willingly does she follow his steps with the rose and the violet, and bend her lines of grandeur and grace to the decoration of her darling child. Only let his thoughts be of equal scope, and the frame will suit the picture. A virtuous man is in unison with her works, and makes the central figure of the visible sphere. Homer, Pindar, Socrates, Phocion, associate themselves fitly in our memory with the geography and climate of Greece. The visible heavens and earth sympathise with Jesus. And in common life, whosoever has seen a person of powerful character and happy genius, will have remarked how easily he took all things along with

him,—the persons, the opinions, and the day, and nature became ancillary to a man.

3. There is still another aspect under which the beauty of the world may be viewed, namely, as it become an object of the intellect. Beside the relation of things to virtue, they have a relation of thought. The intellect searches out the absolute order of things as they stand in the mind of God, and without the colours of affection. The intellectual and the active powers seem to succeed each other, and the exclusive activity of the one, generates the exclusive activity of the other. There is something unfriendly in each to the other, but they are like the alternate periods of feeding and working in animals; each prepares and will be followed by the other. Therefore does beauty, which, in relation to actions, as we have seen, comes unsought, and comes because it is unsought, remain for the apprehension and pursuit of the intellect; and then again, in its turn, of the active power. Nothing divine dies. All good is eternally reproductive. The beauty of nature re-forms itself in the mind, and not for barren contemplation, but for new creation.

All men are in some degree impressed by the face of the world; some men even to delight. This love of beauty is Taste. Others have the same love in such excess, that, not content with admiring, they seek to embody it in new forms. Their creation of beauty is Art.

The production of a work of art throws a light upon the mystery of humanity. A work of art is an abstract or epitome of the world. It is the result or expression of nature, in miniature. For, although the works of nature are innumerable and all different, the result or the expression of them all is similar and single. Nature is a sea of forms radically alike and even unique. A leaf, a sun-beam, a landscape, the ocean, make an analogous impression on the mind. What is common to them all,—that perfectness and harmony, is beauty. The standard of beauty is the entire circuit of natural forms,—the totality of nature; which the Italians expressed by defining beauty "*il piu nell' uno*." Nothing is quite beautiful alone: nothing but is beautiful in the whole. A single object is only so far beautiful as it suggests this universal grace. The poet, the painter, the sculptor, the musician, the architect, seek each to concentrate this radiance of the world on one point, and each in his several work to satisfy the love of beauty which stimulates him to produce. Thus is Art, a nature passed through the alembic of man. Thus in art, does nature work through the will of a man filled with the beauty of her first works.

The world thus exists to the soul to satisfy the desire of beauty. This element I call an ultimate end. No reason can be asked or given why the soul seeks beauty. Beauty, in its largest and profoundest sense, is one expression for the universe. God is the all-fair. Truth,

and goodness, and beauty, are but different faces of the same All. But beauty in nature is not ultimate. It is the herald of inward and eternal beauty, and is not alone a solid and satisfactory good. It must stand as a part and not as yet the last or highest expression of the final cause of Nature.

IV.—LANGUAGE

LANGUAGE is a third use which Nature subserves to man. Nature is the vehicle of thought, and in a simple, double, and threefold degree.

1. Words are signs of natural facts.
2. Particular natural facts are symbols of particular spiritual facts.

3. Nature is the symbol of spirit.

1. Words are signs of natural facts. The use of natural history is to give us aid in supernatural history: the use of the outer creation, to give us language for the beings and changes of the inward creation. Every word which is used to express a moral or intellectual fact, if traced to its root, is found to be borrowed from some material appearance. Right means straight; wrong means twisted. Spirit primarily means wind; transgression, the crossing of a line; supercilious, the raising of the eyebrow. We say the heart to express emotion, the head to denote thought; and thought and emotion are words borrowed from sensible things, and now appropriated to spiritual nature. Most of the process by which this transformation is made, is hidden from us in the remote time when language was framed; but the same tendency may be daily observed in children. Children and savages use only nouns or names of things, which they convert into verbs, and apply to analogous mental acts.

2. But this origin of all words that convey a spiritual import,—so conspicuous a fact in the history of language,—is our least debt to nature. It is not words only that are emblematic; it is things which are emblematic. Every natural fact is a symbol of some spiritual fact. Every appearance in nature corresponds to some state of the mind, and that state of the mind can only be described by presenting that natural appearance as its picture. An enraged man is a lion, a cunning man is a fox, a firm man is a rock, a learned man is a torch. A lamb is innocence; a snake is subtle spite; flowers express to us the delicate affections. Light and darkness are our familiar expression for knowledge and ignorance; and heat for love. Visible distance behind and before us, is respectively our image of memory and hope.

Who looks upon a river in a meditative hour, and is not reminded of the flux of all things? Throw a stone into the stream, and the circles that propagate themselves are the beautiful type of all in-

fluence. Man is conscious of a universal soul within or behind his individual life, wherein, as in a firmament, the natures of Justice, Truth, Love, Freedom, arise and shine. This universal soul, he calls Reason: it is not mine, or thine, or his, but we are its; we are its property and men. And the blue sky in which the private earth is buried, the sky with its eternal calm, and full of everlasting orbs, is the type of Reason. That which, intellectually considered, we call Reason, considered in relation to nature, we call Spirit. Spirit is the Creator. Spirit hath life in itself. And man in all ages and countries, embodies it in his language, as the Father.

It is easily seen that there is nothing lucky or capricious in these analogies, but that they are constant, and pervade nature. These are not the dreams of a few poets, here and there, but man is an analogist, and studies relations in all objects. He is placed in the centre of beings, and a ray of relation passes from every other being to him. And neither can man be understood without these objects, nor these objects without man. All the facts in natural history, taken by themselves, have no value, but are barren, like a single sex. But marry it to human history, and it is full of life. Whole Floras, all Linnæus' and Buffon's volumes, are dry catalogues of facts; but the most trivial of these facts, the habit of a plant, the organs, of work, or noise of an insect, applied to the illustration of a fact in intellectual philosophy, or, in any way associated to human nature, affects us in the most lively and agreeable manner. The seed of a plant,—to what affecting analogies in the nature of man is that little fruit made use of, in all discourse, up to the voice of Paul, who calls the human corpse a seed,—“It is sown a natural body; it is raised a spiritual body.” The motion of the earth round its axis, and round the sun, makes the day, and the year. These are certain amounts of brute light and heat. But is there no intent of an analogy between man's life and the seasons? And do the seasons gain no grandeur or pathos from that analogy? The instincts of the ant are very unimportant, considered as the ant's: but the moment a ray of relation is seen to extend from it to man, and the little drudge is seen to be a monitor, a little body with a mighty heart, then all its habits, even that said to be recently observed, that it never sleeps, become sublime.

Because of this radical correspondence between visible things and human thoughts, savages, who have only what is necessary, converse in figures. As we go back in history, language becomes more picturesque, until its infancy, when it is all poetry; or all spiritual facts are represented by natural symbols. The same symbols are found to make the original elements of all languages. It has moreover been observed, that the idioms of all languages approach each other in passages of the greatest eloquence and power. And as this is the first language, so is it the last. This immediate dependence of lan-

guage upon nature, this conversion of an outward phenomenon into a type of somewhat in human life, never loses its power to affect us. It is this which gives that piquancy to the conversation of a strong-natured farmer or backwoodsman, which all men relish.

A man's power to connect his thought with its proper symbol, and so to utter it, depends on the simplicity of his character, that is, upon his love of truth, and his desire to communicate it without loss. The corruption of man is followed by the corruption of language. When simplicity of character and the sovereignty of ideas is broken up by the prevalence of secondary desires, the desire of riches, of pleasure, of power, and of praise—and duplicity and falsehood take place of simplicity and truth, the power over nature as an interpreter of the will, is in a degree lost; new imagery ceases to be created, and old words are perverted to stand for things which are not; a paper currency is employed, when there is no bullion in the vaults. In due time, the fraud is manifest, and words lose all power to stimulate the understanding or the affections. Hundreds of writers may be found in every long-civilised nation, who for a short time believe, and make others believe, that they see and utter truths, who do not of themselves clothe one thought in its natural garment, but who feed unconsciously on the language created by the primary writers of the country, those, namely, who hold primarily on nature.

But wise men pierce this rotten diction and fasten words again to visible things; so that picturesque language is at once a commanding certificate that he who employs it, is a man in alliance with truth and God. The moment our discourse rises above the ground line of familiar facts, and is inflamed with passion or exalted by thought, it clothes itself in images. A man conversing in earnest, if he watch his intellectual processes, will find that a material image, more or less luminous, arises in his mind, contemporaneous with every thought; which furnishes the vestment of the thought. Hence, good writing and brilliant discourse are perpetual allegories. This imagery is spontaneous. It is the blending of experience with the present action of the mind. It is proper creation. It is the working of the Original Cause through the instruments he has already made.

These facts may suggest the advantage which the country life possesses for a powerful mind, over the artificial and curtailed life of cities. We know more from nature than we can at will communicate. Its light flows into the mind evermore, and we forget its presence. The poet, the orator, bred in the woods, whose senses have been nourished by their fair and appeasing changes, year after year, without design and without heed—shall not lose their lesson altogether, in the roar of cities or the broil of politics. Long thereafter, amidst agitation and terror in national councils—in the hour of revolution—these solemn images shall reappear in their morning lustre, as fit

symbols and words of the thoughts which the passing events shall awaken. At the call of a noble sentiment, again the woods wave, the pines murmur, the river rolls and shines, and the cattle low upon the mountains, as he saw and heard them in his infancy. And with these forms, the spells of persuasion, the keys of power, are put into his hands.

3. We are thus assisted by natural objects in the expression of particular meanings. But how great a language to convey such pepper-corn informations! Did it need such noble races of creatures, this profusion of forms, this host of orbs in heaven, to furnish man with the dictionary and grammar of his municipal speech? Whilst we use this grand cipher to expedite the affairs of our pot and kettle, we feel that we have not yet put it to its use, neither are able. We are like travellers using the cinders of a volcano to roast their eggs. Whilst we see that it always stands ready to clothe what we would say, we cannot avoid the question, whether the characters are not significant of themselves. Have mountains, and waves, and skies no significance but what we consciously give them, when we employ them as emblems of our thoughts? The world is emblematic. Parts of speech are metaphors, because the whole of nature is a metaphor of the human mind. The laws of moral nature answer to those of matter as face to face in a glass. "The visible world and the relation of its parts, is the dial plate of the invisible." The axioms of physics translate the laws of ethics. Thus, "the whole is greater than its part;" "reaction is equal to action;" "the smallest weight may be made to lift the greatest, the difference in weight being compensated by time;" and many the like propositions, which have an ethical as well as physical sense. These propositions have a much more intensive and universal sense when applied to human life, than brute confined to technical use.

In like manner, the memorable words of history, and the pathos of nations, consist usually of a natural fact, selected as a pictorial parable of a moral truth. Thus: A rolling stone gathers no moss; A bird in the hand is worth two in the bush; A cripple in the moni-way, will beat a racer in the wrong; Make hay while the sun sh; that 'Tis hard to carry a full cup even; Vinegar is the son of wine; e. last ounce broke the camel's back; Long-lived trees make roots; and —and the like. In their primary sense, these are trivial facts, but we repeat them for the value of their analogical import. What is pictorial of proverbs, is true of all fables, parables, and allegories.

This relation between the mind and matter is not fancied by sound poet, but stands in the will of God, and so is free to be known to all men. It appears to men, or does not appear. When in fortunate hours we ponder this miracle, the wise man doubts, if, at all of the times, he is not blind and deaf;

"Can these things be,
And overcome us like a summer's cloud,
Without our special wonder?"

for the universe becomes transparent, and the light of higher laws than its own shines through it. It is the standing problem which has exercised the wonder and the study of every fine genius since the world began; from the era of the Egyptians and the Brahmins, to that of Pythagoras, of Plato, of Bacon, of Leibnitz, of Swedenborg. There sits the Sphinx at the road-side, and from age to age, as each prophet comes by, he tries his fortune at reading her riddle. There seems to be a necessity in spirit to manifest itself in material forms; and day and night, river and storm, beast and bird, acid and alkali, pre-exist in necessary Ideas in the mind of God, and are what they are by virtue of preceding affections, in the world of spirit. A Fact is the end or last issue of spirit. The visible creation is the terminus or the circumference of the invisible world. "Material objects," said a French philosopher, "are necessarily kind of *scoriæ* of the substantial thoughts of the Creator, which must always preserve an exact relation to their first origin; in other words, visible nature must have a spiritual and moral side."

This doctrine is abstruse, and though the images of "garment," "*scoriæ*," "mirror," etc., may stimulate the fancy, we must summon the aid of subtler and more vital expositors to make it plain. "Every scripture is to be interpreted by the same spirit which gave it forth," and this is the fundamental law of criticism. A life in harmony with nature, and love of truth and of virtue, will purge the eyes to understand her of fame. By degrees we may come to know the primitive sense of the it clothed. By degrees we may come to know the primitive sense of the his intelligent objects of nature, so that the world shall be to us an less lurid book, and every form significant of its hidden life and final which new interest surprises us, whilst, under the view now suggested, and by contemplate the fearful extent and multitude of objects; since spontaneous object rightly seen, unlocks a new faculty of the soul." That of the Cause was unconscious truth, becomes, when interpreted and defined The object, a part of the domain of knowledge,—a new weapon in sessions magazine of power.

V.—DISCIPLINE

Its li view of the significance of nature, we arrive at once at a new The (that nature is a discipline. This use of the world includes the nour; eding uses, as parts of itself. out space, time, society, labour, climate, food, locomotion, the animals, in the mechanical forces, give us sincerest lessons, day by day, whose agit; aning is unlimited. They educate both the Understanding and the —th

Reason. Every property of matter is a school for the understanding,—its solidity or resistance, its inertia, its extension, its figure, its divisibility. The understanding adds, divides, combines, measures, and finds nutriment and room for its activity in this worthy scene. Meantime, Reason transfers all these lessons into its own world of thought, by perceiving the analogy that marries Matter and Mind.

1. Nature is a discipline of the understanding in intellectual truths. Our dealing with sensible objects is a constant exercise in the necessary lessons of difference, of likeness, of order, of being and seeming, of progressive arrangement; of assent from particular to general; of combination to one end of manifold forces. Proportioned to the importance of the organ to be formed, is the extreme care with which its tuition is provided,—a care pretermitted in no single case. What tedious training, day after day, year after year, never ending, to form the common sense; what continual reproduction of annoyances, inconveniences, dilemmas; what rejoicing over us of little men; what disputing of prices, what reckonings of interest,—and all to form the Hand of the mind;—to instruct us that “good thoughts are no better than good dreams, unless they be executed!”

The same good office is performed by Property and its filial systems of debt and credit. Debt, grinding debt, whose iron face the widow, the orphan, and the sons of genius fear and hate;—debt, which consumes so much time, which so cripples and disheartens a great spirit with cares that seem so base, is a preceptor whose lessons cannot be foregone, and is needed most by those who suffer from it most. Moreover, property, which has been well compared to snow,—“if it fall level today, it will be blown into drifts to-morrow,”—is the surface action of internal machinery, like the index on the face of a clock. Whilst now it is the gymnastics of the understanding, it is having in the foresight of the spirit, experience in profounder laws.

The whole character and fortune of the individual are affected by the least inequalities in the culture of the understanding; for example, in the perception of differences. Therefore is Space, and therefore Time, that man may know that things are not huddled and lumped, but sundered and individual. A bell and a plough have each their use, and neither can do the office of the other. Water is good to drink, coal to burn, wool to wear; but wool cannot be drunk, nor water spun, nor coal eaten. The wise man shows his wisdom in separation, in gradation, and his scale of creatures and of merits is as wide as nature. The foolish have no range in their scale, but suppose every man is as every other man. What is not good they call the worst, and what is not hateful, they call the best.

In like manner, what good heed nature forms in us! She pardons no mistakes. Her yea is yea, and her nay, nay.

The first steps in Agriculture, Astronomy, Zoölogy (those first

steps which the farmer, the hunter, and the sailor take), teach that nature's dice are always loaded; that in her heaps and rubbish are concealed sure and useful results. •

How calmly and genially the mind apprehends one after another the laws of physics! What noble emotions dilate the mortal as he enters into the counsels of the creation, and feels by knowledge the privilege to Be! His insight refines him. The beauty of nature shines in his own breast. Man is greater that he can see this, and the universe less, because Time and Space relations vanish as laws are known.

Here again we are impressed and even daunted by the immense Universe to be explored. "What we know, is a point to what we do not know." Open any recent journal of science, and weigh the problems suggested concerning Light, Heat, Electricity, Magnetism, Physiology, Geology, and judge whether the interest of natural science is likely to be soon exhausted.

Passing by many particulars of the discipline of nature, we must not omit to specify two.

The exercise of the Will or the lesson of power is taught in every event. From the child's successive possession of his several senses up to the hour when he saith, "Thy will be done!" he is learning the secret, that he can reduce under his will, not only particular events, but great classes, nay the whole series of events, and so conform all facts to his character. Nature is thoroughly mediate. It is made to serve. It receives the dominion of man as meekly as the ass on which the Saviour rode. It offers all its kingdoms to man as the raw material which he may mould into what is useful. Man is never weary of working it up. He forges the subtle and delicate air into wise and melodious words, and gives them wing as angels of persuasion and command. One after another, his victorious thought comes up with and reduces all things, until the world becomes, at last, only a realised will,—the double of the man.

2. Sensible objects conform to the premonitions of Reason and reflect the conscience. All things are moral; and in their boundless changes have an unceasing reference to spiritual nature. Therefore is nature glorious with form, colour, and motion, that every globe in the remotest heaven; every chemical change from the rudest crystal up to the laws of life; every change of vegetation from the first principle of growth in the eye of a leaf, to the tropical forest and antediluvian coal-mine; every animal function from the sponge up to Hercules, shall hint or thunder to man the laws of right and wrong, and echo the Ten Commandments. Therefore is nature ever the ally of Religion: lends all her pomp and riches to the religious sentiment. Prophet and priest, David, Isaiah, Jesus, have drawn deeply from this source. This ethical character so penetrates the

bone and marrow of nature, as to seem the end for which it was made. Whatever private purpose is answered by any members or part, this is its public and universal function, and is never omitted. Nothing in nature is exhausted in its first use. When a thing has served an end to the uttermost, it is wholly new for an ulterior service. In God, every end is converted into a new means. Thus the use of commodity, regarded by itself, is mean and squalid. But it is to the mind an education in the doctrine of Use, namely, that a thing is good only so far as it serves; that a conspiring of parts and efforts to the production of an end, is essential to any being. The first and gross manifestation of this truth, is our inevitable and hated training in values and wants, in corn and meat.

It has already been illustrated, that every natural process is a version of a moral sentence. The moral law lies at the centre of nature and radiates to the circumference. It is the pith and marrow of every substance, every relation, and every process. All things with which we deal, preach to us. What is a farm but a mute gospel? The chaff and the wheat, weeds and plants, blight, rain, insects, sun,—it is a sacred emblem from the first furrow of spring to the last stack which the snow of winter overtakes in the fields. But the sailor, the shepherd, the miner, the merchant, in their several resorts, have each an experience precisely parallel, and leading to the same conclusion: because all organisations are radically alike. Nor can it be doubted that this moral sentiment which thus scents the air, grows in the grain, and impregnates the waters of the world, is caught by man and sinks into his soul. The moral influence of nature upon every individual is that amount of truth which it illustrates to him. Who can estimate this? Who can guess how much firmness the seabeaten rock has taught the fisherman? how much tranquillity has been reflected to man from the azure sky, over whose unspotted deeps the winds for evermore drive flocks of stormy clouds, and leave no wrinkle or stain? how much industry and providence and affection we have caught from the pantomime of brutes? What a searching preacher of self-command is the varying phenomenon of Health!

Herein is especially apprehended the unity of Nature,—the unity of variety,—which meets us everywhere. All the endless variety of things make an identical impression. Xenophanes complained in his old age, that, look where he would, all things hastened back to Unity. He was weary of seeing the same entity in the tedious variety of forms. The fable of Proteus has a cordial truth. A leaf, a drop, a crystal, a moment of time is related to the whole, and partakes of the perfection of the whole. Each particle is a microcosm, and faithfully renders the likeness of the world.

Not only resemblances exist in things whose analogy is obvious, as when we detect the type of the human hand in the flipper of the

fossil saurus, but also in objects wherein there is great superficial unlikeness. Thus architecture is called "frozen music," by De Stael and Goethe. Vitruvius thought an architect should be a musician. "A Gothic church," said Coleridge, "is a petrified religion." Michael Angelo maintained, that, to an architect, a knowledge of anatomy is essential. In Haydn's oratorios, the notes present to the imagination not only motions, as, of the snake, the stag, and the elephant, but colours also; as the green grass. The law of harmonic sounds reappears in the harmonic colours. The granite is differenced in its laws only by the more or less of heat, from the river that wears it away. The river, as it flows, resembles the air that flows over it; the air resembles the light which traverses it with more subtle currents; the light resembles the heat which rides with it through Space. Each creature is only a modification of the other; the likeness in them is more than the difference, and their radical law is one and the same. A rule of one art, or a law of one organisation, holds true throughout nature. So intimate is this Unity, that, it is easily seen, it lies under the undermost garment of nature, and betrays its source in Universal Spirit. For, it pervades Thought also. Every universal truth which we express in words, implies or supposes every other truth. *Omne verum vero consonat*. It is like a great circle on a sphere, comprising all possible circles; which, however, may be drawn, and comprise it, in like manner. Every such truth is the absolute Ens seen from one side. But it has innumerable sides.

The central Unity is still more conspicuous in actions. Words are finite organs of the infinite mind. They cannot cover the dimensions of what is in truth. They break, chop, and impoverish it. An action is the perfection and publication of thought. A right action seems to fill the eye, and to be related to all nature. "The wise man, in doing one thing, does all; or, in the one thing he does rightly, he sees the likeness of all which is done rightly."

Words and actions are not the attributes of brute nature. They introduce us to the human form, of which all other organisations appear to be degradations. When this appears among so many that surround it, the spirit prefers it to all others. It says, "From such as this, have I drawn joy and knowledge; in such as this, have I found and beheld myself; I will speak to it; it can speak again; it can yield me thought already formed and alive." In fact, the eye,—the mind,—is always accompanied by these forms, male and female; and these are incomparably the richest informations of the power and order that lie at the heart of things. Unfortunately, every one of them bears the marks as of some injury; is marred and superficially defective. Nevertheless, far different from the deaf and dumb nature around them, these all rest like fountain-pipes on the unfathomed sea

of thought and virtue whereto they alone, of all organisations, are the entrances.

It were a pleasant inquiry to follow into detail their ministry to our education, but where would it stop? We are associated in adolescent and adult life with some friends, who, like skies and waters, are co-extensive with our idea; who, answering each to a certain affection of the soul, satisfy our desire on that side; whom we lack power to put at such focal distance from us, that we can mend or even analyse them. We cannot choose but love them. When much intercourse with a friend has supplied us with a standard of excellence, and has increased our respect for the resources of God who thus sends a real person to outgo our ideal; when he has, moreover, become an object of thought, and, whilst his character retains all its unconscious effect, is converted in the mind into solid and sweet wisdom,—it is a sign to us that his office is closing, and he is commonly withdrawn from our sight in a short time.

VI.—IDEALISM

THUS is the unspeakable but intelligible and practicable meaning of the world conveyed to man, the immortal pupil in every object of sense. To this one end of Discipline, all parts of nature conspire.

A noble doubt perpetually suggests itself, whether this end be not the Final Cause of the Universe; and whether nature outwardly exists. It is a sufficient account of that Appearance we call the World, that God will teach a human mind, and so makes it the receiver of a certain number of congruent sensations, which we call sun and moon, man and woman, house and trade. In my utter impotence to test the authenticity of the report of my senses, to know whether the impressions they make on me correspond with outlying objects, what difference does it make, whether Orion is up there in heaven, or some god paints the image in the firmament of the soul? The relations of parts and the end of the whole remaining the same, what is the difference, whether land and sea interact, and worlds revolve and intermingle without number or end,—deep yawning under deep, and galaxy balancing galaxy, throughout absolute space,—or, whether, without relations of time and space, the same appearances are inscribed in the constant faith of man? Whether nature enjoy a substantial existence without, or is only in the apocalypse of the mind, it is alike useful and alike venerable to me. Be it what it may, it is ideal to me, so long as I cannot try the accuracy of my senses.

The frivolous make themselves merry with the Ideal theory, as if its consequences were burlesque; as if it affected the stability of nature. It surely does not. God never jests with us, and will not compromise the end of nature, by permitting any inconsequence in its procession. Any distrust of the permanence of laws, would paralyse

the faculties of man. Their permanence is sacredly respected, and his faith therein is perfect. The wheels and springs of man are all set to the hypothesis of the permanence of nature. We are not built like a ship to be tossed, but like a house to stand. It is a natural consequence of this structure, that, so long as the active powers predominate over the reflective, we resist with indignation any hint that nature is more short-lived or mutable than spirit. The broker, the wheelwright, the carpenter, the toll-man are much displeased at the intimation.

But whilst we asquiesce entirely in the permanence of natural laws, the question of the absolute existence of nature still remains open. It is the uniform effect of culture on the human mind, not to shake our faith in the stability of particular phenomena, as of heat, water, azote; but to lead us to regard nature as phenomenon, not a substance; to attribute necessary existence to spirit; to esteem nature as an accident and an effect.

To the senses and the renewed understanding belongs a sort of instinctive belief in the absolute existence of nature. In their view, man and nature are indissolubly joined. Things are ultimates, and they never look beyond their sphere. The presence of reason mars this faith. The first effort of thought tends to relax this despotism of the senses, which binds us to nature as if we were a part of it, and shows us nature aloof, and, as it were, afloat. Until this higher agency intervened, the animal eye sees, with wonderful accuracy, sharp outlines and coloured surfaces. When the eye of Reason opens, to outline and surface are at once added grace and expression. These proceed from imagination and affection, and abate somewhat of the angular distinctness of objects. If the Reason be stimulated to more earnest vision, outlines and surfaces become transparent, and are no longer seen; causes and spirits are seen through them. The best moments of life are these delicious awakenings of the higher powers, and the reverential withdrawing of nature before its God.

Let us proceed to indicate the effects of culture. 1. Our first institution in the Ideal philosophy is a hint from nature herself.

Nature is made to conspire with spirit to emancipate us. Certain mechanical changes, a small alteration in our local position, apprises us of a dualism. We are strangely affected by seeing the shore from a moving ship, from a balloon, or through the tints of an unusual sky. The last change in our point of view gives the whole a pictorial air. A man who seldom rides, needs only to get into a coach and traverse his own town, to turn the street into a puppet-show. The men, the women,—talking, running, bartering, fighting,—the earnest mechanic, the loungee, the beggar, the boys, the dogs, are unrealised at once, or, at least, wholly detached from all relation to the observer, and seen as apparent, not substantial beings. What new thoughts are

suggested by seeing a face of country quite familiar, in the rapid movement of the railroad car! Nay, the most wonted objects (make a very slight change in the point of vision) please us most. In a camera obscura, the butcher's cart, and the figure of one of our own family, amuse us. So a portrait of a well-known face gratifies us. Turn the eyes upside down, by looking at the landscape through your legs, and how agreeable is the picture, though you have seen it any time these twenty years!

In these cases, by mechanical means, is suggested the difference between the observer and the spectacle,—between man and nature. Hence arises a pleasure mixed with awe; I may say, a low degree of the sublime is felt from the fact, probably, that man is hereby apprised, that, whilst the world is a spectacle, something in himself is stable.

2. In a higher manner, the poet communicates the same pleasure. By a few strokes he delineates, as on air, the sun, the mountain, the camp, the city, the hero, the maiden, not different from what we know them, but only lifted from the ground and afloat before the eye. He unfixes the land and the sea, makes them revolve around the axis of his primary thought, and disposes them anew. Possessed himself by a heroic passion, he uses matter as symbols of it. The sensual man conforms thoughts to things; the poet conforms things to his thoughts. The one esteems nature as rooted and fast; the other, as fluid, and impresses his being thereon. To him, the refractory world is ductile and flexible; he invests dust and stones with humanity, and makes them the words of the Reason. The Imagination may be defined to be, the use which the Reason makes of the material world. Shakespeare possesses the power of subordinating nature for the purposes of expression, beyond all poets. His imperial muse tosses the creation like a bauble from hand to hand, and uses it to embody any caprice of thought that is uppermost in his mind. The remotest spaces of nature are visited, and the farthest sundered things are brought together, by a subtile spiritual connection. We are made aware that magnitude of material things is relative, and all objects shrink and expand to serve the passion of the poet. Thus, in his sonnets, the lays of birds, the scents and dyes of flowers, he finds to be the shadow of his beloved; time, which keeps her from him, is his chest; the suspicion she has awakened, is her ornament;

The ornament of beauty is Suspect,
A crow which flies in heaven's sweetest air.

His passion is not the fruit of chance; it swells, as he speaks to a city, or a state.

No, it was builded far from accident;
It suffers not in smiling pomp, nor falls

Under the brow of thralling discontent;
It fears not policy, that heretic,
That works on leases of short numbered hours,
But all alone stands hugely politic.

In the strength of his constancy, the Pyramids seem to him recent and transitory. The freshness of youth and love dazzles him with its resemblance to morning.

Take those lips away
Which so sweetly were forsworn:
And those eyes,—the break of day,
Lights that do mislead the morn.

The wild beauty of this hyperbole, I may say, in passing, it would not be easy to match in literature.

This transfiguration which all material objects undergo through the passion of the poet,—this power which he exerts to dwarf the great, to magnify the small,—might be illustrated by a thousand examples from his Plays. I have before me the *Tempest*, and will cite only these few lines.

PROSPERO. The strong based promontory
Have I made shake, and by the spurs plucked up
The pine and cedar.

Prospero calls for music to soothe the frantic Alonso, and his companions;

A solemn air, and the best comforter
To an unsettled fancy, cure thy brains
Now useless, boiled within thy skull.

Again;

The charm dissolves apace,
And, as the morning steals upon the night
Melting the darkness, so their rising senses
Begin to chase the ignorant fumes that mantle
Their clearer reason.

Their understanding
Begins to swell: and the approaching tide
Will shortly fill the reasonable shore
That now lies foul and muddy.

The perception of real affinities between events (that is to say, of Ideal affinities, for those only are real), enables the poet thus to make free with the most imposing forms and phenomena of the world, and to assert the predominance of the soul.

3. Whilst thus the poet animates nature with his thoughts, he differs from the philosopher only herein, that the one proposes Beauty as his main end; the other Truth. But the philosopher, not less than the poet, postpones the apparent order and relations of things to the empire of thought. "The problem of philosophy," according to Plato, "is, for all that exists conditionally, to find a ground unconditioned and absolute." It proceeds on the faith that a law determines all phenomena, which being known, the phenomena can be predicted. That law, when in the mind, is an idea. Its beauty is infinite. The true philosopher and the true poet are one, and a beauty, which is truth, and a truth, which is beauty, is the aim of both. Is not the charm of one of Plato's or Aristotle's definitions, strictly like that of the *Antigone* of Sophocles? It is, in both cases, that a spiritual life has been imparted to nature; that the solid seeming block of matter has been pervaded and dissolved by a thought; that this feeble human being has penetrated the vast masses of nature with an informing soul, and recognised itself in their harmony, that is, seized their law. In physics, when this attained, the memory disburthens itself of its cumbrous catalogues of particulars, and carries centuries of observation in a single formula.

Thus even in physics, the material is degraded before the spiritual. The astronomer, the geometer, rely on their irrefragable analysis, and disdain the results of observation. The sublime remark of Euler on his law of arches, "This will be found contrary to all experience, yet is true;" had already transferred nature into the mind, and left matter like an outcast corpse.

4. Intellectual science has been observed to beget invariably a doubt of the existence of matter. Turgot said, "He that has never doubted the existence of matter, may be assured he has no aptitude for metaphysical inquiries." It fastens the attention upon immortal necessary uncreated natures, that is, upon Ideas; and in their presence, we feel that the outward circumstance is a dream and a shade. Whilst we wait in this Olympus of gods, we think of nature as an appendix to the soul. We ascend into their region, and know that these are the thoughts of the Supreme Being. "These are they who were set up from everlasting, from the beginning, or ever the earth was. When he prepared the heavens, they were there; when he established the clouds above, when he strengthened the fountains of the deep. Then they were by him, as one brought up with him. Of them took he counsel."

Their influence is proportionate. As objects of science, they are accessible to few men. Yet all men are capable of being raised by piety or by passion, into their region. And no man touches these divine natures, without becoming, in some degree, himself divine. Like a new soul, they renew the body. We become physically nimble and

lightsome; we tread on air; life is no longer irksome, and we think it will never be so. No man fears age or misfortune or death, in their serene company, for he is transported out of the district of change. Whilst we behold unveiled the nature of Justice and Truth, we learn the difference between the absolute and the conditional or relative. We apprehend the absolute. As it were, for the first time, we exist. We become immortal, for we learn that time and space are relations of matter; that, with a perception of truth, or a virtuous will, they have no affinity.

5. Finally, religion and ethics, which may be fitly called,—the practice of ideas, or the introduction of ideas into life,—have an analogous effect with all lower culture, in degrading nature and suggesting its dependence on spirit. Ethics and religion differ herein; that the one is the system of human duties commencing from man; the other, from God. Religion includes the personality of God; Ethics does not. They are one to our present design. They both put nature under foot. The first and last lesson of religion is, "The things that are seen are temporal; the things that are unseen are eternal." It puts an affront upon nature. It does that for the unschooled, which philosophy does for Berkeley and Viasa. The uniform language that may be heard in the churches, of the most ignorant seats, is,—"*Contemn the unsubstantial shows of the world; they are vanities, dreams, shadows, unrealities: seek the realities of religion.*" The devotee flouts nature. Some theosophists have arrived at a certain hostility and indignation towards matter, as the Manichean and Plotinus. They distrusted in themselves any looking back to these fleshpots of Egypt. Plotinus was ashamed of his body. In short, they might all say of matter, what Michael Angelo said of external beauty, "*It is the frail and weary weed, in which God dresses the soul, which he has called into time.*"

It appears that motion, poetry, physical and intellectual science, and religion, all tend to affect our convictions of the reality of the external world. But I own there is something ungrateful in expanding too curiously the particulars of the general proposition, that all culture tends to imbue us with idealism. I have no hostility to nature, but a child's love to it. I expand and live in the warm day like corn and melons. Let us speak her fair. I do not wish to fling stones at my beautiful mother, nor soil my gentle nest. I only wish to indicate the true position of nature in regard to man, wherein to establish man, all right education tends; as the ground which to attain is the object of human life, that is, of man's connection with nature. Culture inverts the vulgar views of nature, and brings the mind to call that apparent, which it uses to call real, and that real, which it uses to call visionary Children, it is true, believe in the external world. The

belief that it appears only, is an afterthought, but with culture, this faith will as surely arise in the mind as did the first.

The advantages of the ideal theory over the popular faith, is this, that it presents the world in precisely that view which is most desirable to the mind. It is, in fact, the view which Reason, both speculative and practical, that is, philosophy and virtue, take. For, seen in the light of thought, the world always is phenomenal; and virtue subordinates it to the mind. Idealism sees the world in God. It beholds the whole circle of persons and things, of actions and events, of country and religion, not as painfully accumulated, atom after atom, act after act, in an aged creeping Past, but as one vast picture, which God paints on the instant eternity, for the contemplation of the soul. Therefore the soul holds itself off from a too trivial and microscopic study of the universal tablet. It respects the end too much, to immerse itself in the means. It sees something more important in Christianity, than the scandals of ecclesiastical history, or the niceties of criticism; and, very incurious concerning persons or miracles, and not at all disturbed by chasms of historical evidence, it accepts from God the phenomenon, as it finds it, as the pure and awful form of religion in the world. It is not hot and passionate at the appearance of what it calls its own good or bad fortune, at the union or opposition of other persons. No man is its enemy. It accepts whatsoever befalls, as part of its lesson. It is a watcher more than a doer, and it is a doer, only that it may the better watch.

VII.—SPIRIT

It is essential to a true theory of nature and of man, that it should contain somewhat progressive. Uses that are exhausted or that may be, and facts that end in the statement, cannot be all that is true of this brave lodging wherein man is harboured, and wherein all his faculties find appropriate and endless exercise. And all the uses of nature admit of being summed in one, which yields the activity of man an infinite scope. Through all its kingdoms, to the suburbs and outskirts of things, it is faithful to the cause whence it had its origin. It always speaks of Spirit. It suggests the absolute. It is a perpetual effect. It is a great shadow pointing always to the sun behind us.

The aspect of nature is devout. Like the figure of Jesus, she stands with bended head, and hands folded upon the breast. The happiest man is he who learns from nature the lesson of worship.

Of that ineffable essence which we call Spirit, he that thinks most, will say least. We can foresee God in the coarse, and, as it were, distant phenomena of matter; but when we try to define and describe himself, both language and thought desert us, and we are as helpless as fools and savages. That essence refuses to be recorded in proposi-

tions, but when man has worshipped him intellectually, the noblest ministry of nature is to stand as the apparition of God. It is the organ through which the universal spirit speaks to the individual, and strives to lead back the individual to it.

When we consider Spirit we see that the views already presented do not include the whole circumference of man. We must add some related thoughts.

Three problems are put by nature to the mind; What is matter? Whence is it? and Whereto? The first of these questions only, the ideal theory answers. Idealism saith: matter is a phenomenon, not a substance. Idealism acquaints us with the total disparity between the evidence of our own being, and the evidence of the world's being. The one is perfect; the other, incapable of any assurance; the mind is a part of the nature of things; the world is a divine dream, from which we may presently awake to the glories and certainties of day. Idealism is a hypothesis to account for nature by other principles than those of carpentry and chemistry. Yet, if it only deny the existence of matter, it does not satisfy the demands of the spirit. It leaves God out of me. It leaves me in the splendid labyrinth of my perceptions, to wander without end. Then the heart resists it, because it baulks the affections in denying substantive being to men and women. Nature is so pervaded with human life, that there is something of humanity in all, and in every particular. But this theory makes nature foreign to me, and does not account for that consanguinity which we acknowledge to it.

Let it stand, then, in the present state of our knowledge, merely as a useful introductory hypothesis, serving to apprise us of the eternal distinction between the soul and the world.

But when, following the invisible steps of thought, we come to inquire, Whence is matter? and Whereto? many truths arise to us out of the recesses of consciousness. We learn that the highest is present to the soul of man, that the dread universal essence, which is not wisdom, or love, or beauty, or power, but all in one, and each entirely, is that for which all things exist, and that by which they are; that spirit creates; that behind nature, throughout nature, spirit is present; one and not compound, it does not act upon us from without, that is, in space and time, but spiritually, or through ourselves: therefore, that spirit, that is, the Supreme Being, does not build up nature around us, but puts it forth through us, as the life of the tree puts forth new branches and leaves through the pores of the old. As a plant upon the earth, so a man rests upon the bosom of God; he is nourished by unfailing fountains, and draws, at his need, inexhaustible power. Who can set bounds to the possibilities of man? Once inhale the upper air, being admitted to behold the absolute natures of justice and truth, and we learn that man has access to the

entire mind of the Creator, is himself the creator in the finite. This view, which admonishes me where the sources of wisdom and power lie, and points to virtue as to

"The golden key

Which opes the palace of eternity,"

carries upon its face the highest certificate of truth, because it animates me to create my own world through the purification of my soul.

The world proceeds from the same spirit as the body of man. It is a remoter and inferior incarnation of God, a projection of God in the unconscious. But it differs from the body in one important respect. It is not, like that, now subjected to the human will. Its serene order is inviolable by us. It is, therefore, to us, the present expositor of the divine mind. It is a fixed point whereby we may measure our departure. As we degenerate, the contrast between us and our house is more evident. We are as much strangers in nature, as we are aliens from God. We do not understand the notes of birds. The fox and the deer run away from us; the bear and tiger rend us. We do not know the uses of more than a few plants, as corn and the apple, the potato and the vine. Is not the landscape, every glimpse of which hath a grandeur, a face of him? Yet this may show us what discord is between man and nature, for you cannot freely admire a noble landscape, if labourers are digging in the field hard by. The poet finds something ridiculous in his delight, until he is out of the sight of men.

VIII.—PROSPECTS

IN inquiries respecting the laws of the world and the frame of things, the highest reason is always the truest. That which seems faintly possible—it is so refined, is often faint and dim because it is deepest seated in the mind among the eternal verities. Empirical science is apt to cloud the sight, and, by the very knowledge of functions and processes, to bereave the student of the manly contemplation of the whole. The savant becomes unpoetic. But the best read naturalist, who lends an entire and devout attention to truth, will see that there remains much to learn of his relation to the world, and that it is not to be learned by any addition or subtraction or other comparison of known quantities, but is arrived at by untaught sallies of the spirit, by a continual self-recovery, and by entire humility. He will perceive that there are far more excellent qualities in the student than preciseness and infallibility; that a guess is often more fruitful than an indisputable affirmation, and that a dream may let us deeper into the secret of nature than a hundred concerted experi-

ments. For, the problems to be solved are precisely those which the physiologist and the naturalist omit to state. It is not so pertinent to man to know all the individuals of the animal kingdom, as it is to know whence and whereto is this tyrannising unity in his constitution, which evermore separates and classifies things, endeavouring to reduce the most diverse to one form. When I behold a rich landscape, it is less to my purpose to recite correctly the order and superposition of the strata, than to know why all thought of multitude is lost in a tranquil sense of unity. I cannot greatly honour minuteness in details, so long as there is no hint to explain the relation between things and thoughts; no ray upon the metaphysics of conchology, of botany, of the arts, to show the relation of the forms of flowers, shells, animals, architecture, to the mind, and build science upon ideas. In a cabinet of natural history, we become sensible of a certain occult recognition and sympathy in regard to the most unwieldy and eccentric forms of beast, fish, and insect. The American who has been confined, in his own country, to the sight of buildings designed after foreign models, is surprised on entering York Minster or St. Peter's at Rome, by the feeling that these structures are imitations also,—faint copies of an invisible archetype. Nor has science sufficient humanity, so long as the naturalist overlooks that wonderful congruity which subsists between man and the world; of which he is lord, not because he is the most subtle inhabitant, but because he is its head and heart, and finds something of himself in every great and small thing, in every mountain stratum, in every new law of colour, fact of astronomy, or atmospheric influence which observation or analysis lay open. A perception of this mystery inspires the muse of George Herbert, the beautiful psalmist of the seventeenth century. The following lines are part of his little poem on Man.

“Man is all symmetry,
Full of proportions, one limb to another,
And all to all the world besides.
Each part may call the farthest, brother;
For head with foot hath private amity
And both with moons and tides.

“Nothing hath got so far
But man hath caught and kept it as his prey;
His eyes dismount the highest star;
He is in little all the sphere.
Herbs gladly cure our flesh, because that they
Find their acquaintance there.

“For us, the winds do blow,
The earth doth rest, heaven move, and fountains flow;

Nothing we see, but means our good,
 As our delight, or as our treasure;
 The whole is either our cupboard of food,
 Or cabinet of pleasure.

"The stars have us to bed:
 Night draws the curtain; which the sun withdraws.
 Music and light attend our head.
 All things unto our flesh are kind,
 In their descent and being; to our mind,
 In their ascent and cause.

"More servants wait on man
 Than he'll take notice of. In every path,
 He treads down that which doth befriend him
 When sickness makes him pale and wan .
 Oh mighty love! Man is one world, and hath
 Another to attend him."

The perception of this class of truth makes the attraction which draws men to science, but the end is lost sight of in attention to the means. In view of this half-sight of science, we accept the sentence of Plato, that "poetry comes nearer to vital truth than history." Every surmise and vaticination of the mind is entitled to a certain respect, and we learn to prefer imperfect theories, and sentences, which contain glimpses of truth, to digested systems which have no one valuable suggestion. A wise writer will feel that the ends of study and composition are best answered by announcing undiscovered regions of thought, and so communicating, through hope, new activity to the torpid spirit.

I shall therefore conclude this essay with some traditions of man and nature, which a certain poet sang to me; and which, as they have always been in the world, and perhaps reappear to every bard, may be both history and prophecy.

"The foundations of man are not in matter, but in spirit. But the element of spirit is eternity. To it, therefore, the longest series of events, the oldest chronologies, are young and recent. In the cycle of the universal man, from whom the known individuals proceed, centuries are points, and all history is but the epoch of one degradation.

"We distrust and deny inwardly our sympathy with nature. We own and disown our relation to it, by turns. We are, like Nebuchadnezzar, dethroned, bereft of reason, and eating grass like an ox. But who can set limits to the remedial force of spirit?

"A man is a god in ruins. When men are innocent, life shall be longer, and shall pass into the immortal, as gently as we awake from

dreams. Now, the world would be insane and rabid, if these disorganisations should last for hundreds of years. It is kept in check by death and infancy. Infancy is the perpetual Messiah, which comes into the arms of fallen men, and pleads with them to return to paradise.

"Man is the dwarf of himself. Once he was permeated and dissolved by spirit. He filled nature with his overflowing currents. Out from him sprang the sun and moon: from man, the sun; from woman, the moon. The laws of his mind, the periods of his actions, externised themselves into day and night, into the year and the seasons. But, having made for himself this huge shell, his waters retired; he no longer fills the veins and veinlets; he is shrunk to a drop. He sees, that the structure still fits him, but fits him colossally. Say, rather, once it fitted him, now it corresponds to him from far and on high. He adores timidly his own work. Now is man the follower of the sun, and woman the follower of the moon. Yet sometimes he starts in his slumber, and wonders at himself and his house, and muses strangely at the resemblance betwixt him and it. He perceives that if his law is still paramount, if still he have elemental power, if his word is sterling yet in nature, it is not conscious power, it is not inferior but superior to his will. It is Instinct." Thus my Orphic poet sang.

At present, man applies to nature but half his force. He works on the world with his understanding alone. He lives in it, and masters it by a penny-wisdom; and he that works most in it, is but a half-man, and whilst his arms are strong and his digestion good, his mind is imbruted, and he is a selfish savage. His relation to nature, his power over it, is through the understanding; as by manure; the economic use of fire, wind, water, and the mariner's needle; steam, coal, chemical agriculture; the repairs of the human body by the dentist and the surgeon. This is such a resumption of power, as if a banished king should buy his territories inch by inch, instead of vaulting at once into his throne. Meantime, in the thick darkness, there are not wanting gleams of a better light—occasional examples of the action of man upon nature with entire force—with reason as well as understanding. Such examples are; the traditions of miracles in the earliest antiquity of all nations; the history of Jesus Christ; the achievements of a principle, as in religious and political revolutions, and in the abolition of the Slave-trade, the miracles of enthusiasm, as those reported of Swedenborg, Hohenlohe, and the Shakers; man obscure and yet contested facts, now arranged under the name of Animal Magnetism; prayer; eloquence; self-healing; and the wisdom of children. These are examples of Reason's momentary grasp of the sceptre; the exertions of a power which exists not in time or space, but an instantaneous instreaming causing power. The

difference between the actual and the ideal force of man is happily figured by the schoolmen, in saying, that the knowledge of man is an evening knowledge, *vespertina cognitio*, but that of God is a morning knowledge, *matutina cognitio*.

The problem of restoring to the world original and eternal beauty is solved by the redemption of the soul. The ruin or the blank, that we see when we look at nature, is in our own eye. The axis of vision is not coincident with the axis of things, and so they appear not transparent but opaque. The reason why the world lacks unity, and lies broken and in heaps, is, because man is disunited with himself. He cannot be a naturalist, until he satisfies all the demands of the spirit. Love is as much its demand, as perception. Indeed, neither can be perfect without the other. In the uttermost meaning of the words, thought is devout, and devotion is thought. Deep calls unto deep. But in actual life, the marriage is not celebrated. There are innocent men who worship God after the tradition of their fathers, but their sense of duty has not yet extended to the use of all their faculties. And there are patient naturalists, but they freeze their subject under the wintry light of the understanding. Is not prayer also a study of truth—a sally of the soul into the unfound infinite? No man ever prayed heartily, without learning something. But when a faithful thinker, resolute to detach every object from personal relations, and see it in the light of thought, shall, at the same time, kindle science with the fire of the holiest affections, then will God go forth anew into the creation.

It will not need, when the mind is prepared for study, to search for objects. The invariable mark of wisdom is to see the miraculous in the common. What is a day? What is a year? What is summer? What is woman? What is a child? What is sleep? To our blindness, these things seem unaffecting. We make fables to hide the baldness of the fact, and conform it, as we say, to the higher law of the mind. But when the fact is seen under the light of an idea, the gaudy fable fades and shrivels. We behold the real higher law. To the wise, therefore, a fact is true poetry, and the most beautiful of fables. These wonders are brought to our own door. You also are a man. Man and woman, and their social life, poverty, labour, sleep, fear, fortune, are known to you. Learn that none of these things is superficial, but that each phenomenon has its roots in the faculties and affections of the mind. Whilst the abstract question occupies your intellect, nature brings it in the concrete to be solved by your hands. It were a wise inquiry for the closet, to compare, point by point, especially at remarkable crises in life, our daily history, with the rise and progress of ideas in the mind.

So shall we come to look at the world with new eyes. It shall answer the endless inquiry of the intellect—What is truth? and of

the affections—What is good? by yielding itself passive to the educated Will. Then shall come to pass what my poet said; "Nature is not fixed but fluid." Spirit alters, moulds, makes it. The immobility or bruteness of nature, is the absence of spirit; to pure spirit, it is fluid, it is volatile, it is obedient. Every spirit builds itself a house; and beyond its house, a world; and beyond its world, a heaven. Know then, that the world exists for you. For you is the phenomenon perfect. What we are, that only can we see. All that Adam had, all that Cæsar could, you have and can do. Adam called his house, heaven and earth; Cæsar called his house, Rome; you perhaps call yours, a cobbler's trade; a hundred acres of ploughed land; or a scholar's garret. Yet line for line and point for point, your dominion is as great as theirs, though without fine names. Build, therefore, your own world. As fast as you conform your life to the pure idea in your mind, that will unfold its great proportions. A correspondent revolution in things will attend the influx of the spirit. So fast will disagreeable appearances, swine, spiders, snakes, pests, mad-houses, prisons, enemies, vanish; they are temporary and shall be no more seen. The sordor and filths of nature, the sun shall dry up, and the wind exhale. As when the summer comes from the south; the snow-banks melt, and the face of the earth becomes green before it, so shall the advancing spirit create its ornaments along its path, and carry with it the beauty it visits, and the song which enchants; it shall draw beautiful faces, warm hearts, wise discourse, and heroic acts, around its way, until evil is no more seen. The kingdom of man over nature, which cometh not with observation—a dominion such as now is beyond his dream of God—he shall enter without more wonder than the blind man feels who is gradually restored to perfect sight.

THE CONDUCT OF LIFE

IX

FATE

Delicate omens traced in air
To the lone bard true witness bare;
Birds with auguries on their wings
Chanted undeceiving things,
Him to beckon, him to warn;
Well might then the poet scorn
To learn of scribe or courier
Hints writ in vaster character;
And on his mind, at dawn of day,
Soft shadows of the evening lay.
For the prevision is allied
Unto the things so signified;
Or say, the foresight that awaits
Is the same Genius that creates.

It chanced during one winter, a few years ago, that our critics were bent on discussing the theory of the Age. By an odd coincidence, four or five noted men were each reading a discours to the citizens of Boston or New York, on the Spirit of the Times. It so happened that the subject had the same prominence in some remarkable pamphlets and journals issued in London in the same season. To me, however, the question of the times resolved itself into a practical question of the conduct of life. How shall I live? We are incompetent to solve the times. Our geometry cannot span the huge orbits of the prevailing ideas, behold their return, and reconcile their opposition. We can only obey our own polarity. 'Tis fine for us to speculate and elect our course, if we must accept an irresistible dictation.

In our first steps to gain our wishes, we come upon immovable limitations. We are fired with the hope to reform men. After many experiments, we find that we must begin earlier—at school. But the boys and girls are not docile; we can make nothing of them. We decide that they are not of good stock. We must begin our reform earlier still—at generation: that is to say, there is Fate, or laws of the world.

But, if there be irresistible dictation, this dictation understands itself. If we must accept Fate, we are not less compelled to affirm lib-

erty, the significance of the individual, the grandeur of duty, the power of character. This is true, and that other is true. But our geometry cannot span these extreme points, and reconcile them. What to do? By obeying each thought frankly by harping, or, if you will, pounding on each string, we learn at last its power. By the same obedience to other thoughts, we learn theirs, and then comes some reasonable hope of harmonising them. We are sure, that, though we know not how, necessity does comport with liberty, the individual with the world, my polarity with the spirit of the times. The riddle of the age has for each a private solution. If one would study his own time, it must be by this method of taking up in turn each of the leading topics which belong to our scheme of human life, and, by firmly stating all that is agreeable to experience on one, and doing the same justice to the opposing facts in the others, the true limitations will appear. Any excess of emphasis, on one part, would be corrected, and a just balance would be made.

But let us honestly state the facts. Our America has a bad name for superficialness. Great men, great nations, have not been boasters and buffoons, but perceivers of the terror of life, and have manned themselves to face it. The Spartan, embodying his religion in his country, dies before its majesty without a question. The Turk, who believes his doom is written on the iron leaf in the moment when he entered the world, rushes on the enemy's sabre with undivided will. The Turk, the Arab, the Persian, accepts the fore-ordained fate.

"On two days, it steads not to run from thy grave,
The appointed, and the unappointed day;
On the first, neither balm nor physician can save,
Nor thee, on the second, the Universe slay."

The Hindoo, under the wheel, is as firm. Our Calvinists, in the last generation, had something of the same dignity. They felt that the weight of the Universe held them down to their place. What could they do? Wise men feel that there is something which cannot be talked or voted away—a strap or belt which girds the world.

"The Destiny, minister general,
That executeth in the world o'er all,
The purveyance which God hath seen beforne,
So strong it is, that tho' the world had sworn
The contrary of a thing by yea or nay,
Yet sometime it shall fallen on a day
That falleth not oft in a thousand year,
For, certainly, our appetitès here,
Be it of war, or peace, or hate, or love,
All this is ruled by the sight above."

CHAUCER: *The Knight's Tale*.

The Greek Tragedy expressed the same sense: "Whatever is fated, that will take place. The great immense mind of Jove is not to be transgressed."

Savages cling to a local god of one tribe or town. The broad ethics of Jesus were quickly narrowed to village theologies, which preach an election or favouritism. And, now and then, an amiable parson, like Jung Stilling, or Robert Huntington, believes in a pistareen-Providence, which, whenever the good man wants a dinner, makes that somebody shall knock at his door, and leave a half-dollar. But Nature is no sentimentalist—does not cosset or pamper us. We must see that the world is rough and surly, and will not mind drowning a man or a woman; but swallows your ship like a grain of dust. The cold, inconsiderate of persons, tingles your blood, benumbs your feet, freezes a man like an apple. The diseases, the elements, fortune, gravity, lightning, respect no persons. The way of Providence is a little rude. The habit of snake and spider, the snap of the tiger and other leapers and bloody jumpers, the crackle of the bones of his prey in the coil of the anaconda—these are in the system, and our habits are like theirs. You have just dined, and, however scrupulously the slaughter-house is concealed in the graceful distance of miles, there is complicity—expensive races—race living at the expense of race. The planet is liable to shocks from comets, perturbations from planets, rendings from earthquake and volcano, alterations of climate, precessions of equinoxes. Rivers dry up by opening of the forest. The sea changes its bed. Towns and counties fall into it. At Lisbon, an earthquake killed men like flies. At Naples, three years ago, ten thousand persons were crushed in a few minutes. The scurvy at sea; the sword of the climate in the west of Africa, at Cayenne, at Panama, at New Orleans, cut off men like a massacre. Our western prairie shakes with fever and ague. The cholera, the small-pox, have proved as mortal to some tribes, as a frost to the crickets, which, having filled the summer with noise, are silenced by a fall of the temperature of one night. Without uncovering what does not concern us, or counting how many species of parasites hang on a bombyx; or groping after intestinal parasites, or infusory biters, or the obscurities of alternate generation;—the forms of the shark, the *labrus*, the jaw of the sea-wolf payed with crushing teeth, the weapons of the grampus, and other warriors hidden in the sea—are hints of ferocity in the interiors of nature. Let us not deny it up and down. Providence has a wild, rough, incalculable road to its end, and it is of no use to try to white-wash its huge, mixed instrumentalities, or to dress up that terrific benefactor in a clean shirt and white neckcloth of a student in divinity.

Will you say, the disasters which threaten mankind are exceptional, and one need not lay his account for cataclysms every day? Ay, but

what happens once, may happen again, and so long as these strokes are not to be parried by us, they must be feared.

But these shocks and ruins are less destructive to us, than the stealthy power of other laws which act on us daily. An expense of ends to means is fate;—organisation tyrannising over character. The menagerie, or forms and powers of the spine, is a book of fate: the bill of the bird, the skull of the snake, determines tyrannically its limits. So is the scale of races, of temperaments; so is sex; so is climate; so is the reaction of talents imprisoning the vital power in certain directions. Every spirit makes its house; but afterwards the house confines the spirit.

The gross lines are legible to the dull: the cabman is phrenologist so far: he looks in your face to see if his shilling is sure. A dome of brow denotes one thing; a pot-belly another; a squint, a pug-nose, mats of hair, the pigment of the epidermis, betray character. People seem sheathed in their tough organisation. Ask Spurzheim, ask the doctors, ask Quetelet, if temperaments decide nothing? or if there be anything they do not decide? Read the description in medical books of the four temperaments, and you will think you are reading your own thoughts which you had not yet told. Find the part which black eyes, and which blue eyes, play severally in the company. How shall a man escape from his ancestors, or draw off from his veins the black drop which he drew from his father's or his mother's life? It often appears in a family, as if all the qualities of the progenitors were potted in several jars—some ruling quality in each son or daughter of the house—and sometimes the unmitigated temperament, the rank unmitigated elixir, the family vice, is drawn off in a separate individual, and the others are proportionally relieved. We sometimes see a change of expression in our companion, and say, his father, or his mother, comes to the windows of his eyes, and sometimes a remote relative. In different hours, a man represents each of several of his ancestors, as if there were seven or eight of us rolled up in each man's skin—seven or eight ancestors at least—and they constitute the variety of notes for that new piece of music which his life is. At the corner of the street, you read the possibility of each passenger, in the facial angle, in the complexion, in the depth of his eye. His parentage determines it. Men are what their mothers made them. You may as well ask a loom which weaves huckaback, why it does not make cashmere, as expect poetry from this engineer or a chemical discovery from that jobber. Ask the digger in the ditch to explain Newton's laws: the fine organs of his brains have been pinched by overwork and squalid poverty from father to son, for a hundred years. When each comes forth from his mother's womb, the gate of gifts closes behind him. Let him value his hands and feet, he has but one pair. So he has but one future, and that is already predetermined in

his lobes, and described in that little fatty face, pig-eye, and squat form. All the privilege and all the legislation of the world cannot meddle or help to make a poet or a prince of him.

Jesus said, "When he looketh on her, he hath committed adultery." But he is an adulterer before he has yet looked on the woman, by the superfluity of animal, and the defect of thought, in his constitution. Who meets him, or who meets her, in the street, sees that they are ripe to be each other's victim.

In certain men, digestion and sex absorb the vital force, and the stronger these are, the individual is so much weaker. The more of these drones perish, the better for the hive. If, later, they give birth to some superior individual, with force enough to add to this animal a new aim, and a complete apparatus to work it out, all the ancestors are gladly forgotten. Most men and most women are merely one couple more. Now and then, one has a new cell or camarilla opened in his brain—an architectural, a musical, or a philological knack, some-stray taste or talent for flowers, or chemistry, or pigments, or story-telling, a good hand for drawing, a good foot for dancing, an athletic frame for wide journeying, etc.—which skill nowise alters rank in the scale of nature, but serves to pass the time, the life of sensation going on as before. At last, these hints and tendencies are fixed in one, or in a succession. Each absorbs so much food and force, as to become itself a new centre. The new talent draws off so rapidly the vital force, that not enough remains for the animal functions, hardly enough for health; so that, in the second generation, if the like genius appear, the health is visibly deteriorated, and the generative force impaired.

People are born with the moral or with the material bias;—uterine brothers with this diverging destination: and I suppose with high magnifiers, Mr. Fraunhofer or Dr. Carpenter might come to distinguish in the embryo at the fourth day, this is a Whig, and that a Free-soiler.

It was a poetic attempt to lift this mountain of Fate, to reconcile this despotism of race with liberty, which led the Hindoos to say, "Fate is nothing but the deeds committed in a prior state of existence." I find the coincidence of the extremes of eastern and western speculation in the daring statement of Schelling, "there is in every man a certain feeling, that he has been what he is from all eternity, and by no means became such in time." To say it less sublimely—in the history of the individual is always an account of his condition, and he knows himself to be a party to his present estate.

A good deal of our politics is physiological. Now and then, a man of wealth in the heyday of youth adopts the tenet of broadest freedom. In England, there is always some man of wealth and large connection planting himself, during all his years of health, on the side of progress, who, as soon as he begins to die, checks his forward play, calls in his troops, and becomes conservative. All conservatives are such

from personal defects. They have been effeminated by position or nature, born halt and blind, through luxury of their parents, and can only, like invalids, act on the defensive. But strong natures, backwoodsmen, New Hampshire giants, Napoleons, Burkes, Broughams, Websters, Kossuths, are inevitable patriots, until their life ebbs, and their defects and gout, palsy and money, warp them.

The strongest idea incarnates itself in majorities and nations, in the healthiest and strongest. Probably, the election goes by avoirdupois weight, and, if you could weigh bodily the tonnage of any hundred of the Whig and the Democratic party in a town, on the Dearborn balance, as they passed the hayscales, you could predict with certainty which party would carry it. On the whole, it would be rather the speediest way of deciding the vote, to put the selectmen or the mayor and aldermen at the hayscales.

In science, we have to consider two things: power and circumstance. All we know of the egg, from each successive discovery, is, another vesicle; and if, after five hundred years, you get a better observer, or a better glass, he finds within the last observed another. In vegetable and animal tissue, it is just alike, and all that the primary power or spasm operates, is, still, vesicles, vesicles. Yes—but the tyrannical Circumstance! A vesicle in new circumstances, a vesicle lodged in darkness. Oken thought, became animal; in light, a plant. Lodged in the parent animal, it suffers changes, which end in unsheathing miraculous capability in the unaltered vesicle, and it unlocks itself to fish, bird, or quadruped, head and foot, eye and claw. The Circumstance is Nature. Nature is, what you may do. There is much you may not. We have two things—the circumstance, and the life. Once we thought, positive power was all. Now we learn, that negative power, or circumstance, is half. Nature is the tyrannous circumstance, the thick skull, the sheathed snake, the ponderous, rock-like jaw; necessitated activity; violent direction; the conditions of a tool, like the locomotive, strong enough on its track, but which can do nothing but mischief off it; or skates, which are wings on the ice, but fetters on the ground.

The book of Nature is the book of Fate. She turns the gigantic pages—leaf after leaf—never re-turning one. One leaf she lays down, a floor of granite; then a thousand ages, and a bed of slate; a thousand ages, and a measure of coal; a thousand ages, and a layer of marl and mud; vegetable forms appear; her first misshapen animals, zoo-phyte, trilobium, fish, then, saurians—rude forms, in which she has only blocked her future statue, concealing under these unwieldy monsters the fine type of her coming king. The face of the planet cools and dries, the races meliorate, and man is born. But when a race has lived its term, it comes no more again.

The population of the world is a conditional population; not the

best, but the best that could live now; and the scale of tribes, and the steadiness with which victory adheres to one tribe, and defeat to another, is as uniform as the superposition of strata. We know in history what weight belongs to race. We see the English, French, and Germans, planting themselves on every shore and market of America and Australia, and monopolising the commerce of these countries. We like the nervous and victorious habit of our branch of the family. We follow the step of the Jew, of the Indian, of the Negro. We see how much will has been expended to extinguish the Jew, in vain. Look at the unpalatable conclusions of Knox, in his *Fragment of Races*,—a rash and unsatisfactory writer, but charged with pungent and unforgettable truths. "Nature respects race, and not hybrids." "Every race has its own habitat." "Detach a colony from the race, and it deteriorates to the crab." See the shades of the picture. The German and Irish millions, like the Negro, have a great deal of guano in their destiny. They are ferried over the Atlantic, and carted over America, to ditch and to drudge, to make corn cheap, and then to lie down prematurely to make a spot of green grass on the prairie.

One more fagot of these adamantine bandages, is, the new science of Statistics. It is a rule, that the most casual and extraordinary events—if the basis of population is broad enough—become matter of fixed calculation. It would not be safe to say when a captain like Bonaparte, a singer like Jenny Lind, or a navigator like Bowditch, would be born in Boston: but, on a population of twenty or two hundred millions, something like accuracy may be had.

'Tis frivolous to fix pedantically the date of particular inventions. They have all been invented over and over fifty times. Man is the arch machine, of which all these shifts drawn from himself are toy models. He helps himself on each emergency by copying or duplicating his own structure, just so far as the need is. 'Tis hard to find the right Homer, Zoroaster, or Menu; harder still to find the Tubal Cain, or Vulcan, or Cadmus, or Copernicus, or Fust, or Fulton, the indisputable inventor. There are scores and centuries of them. "The air is full of men." This kind of talent so abounds, this constructive tool-making efficiency, as if it adhered to the chemic atoms, as if the air he breathes were made of Vaucansons, Franklins, and Watts.

Doubtless, in every million there will be an astronomer, a mathematician, a comic poet, a mystic. No one can read the history of astronomy, without perceiving that Copernicus, Newton, Laplace, are not new men, or a new kind of men, but that Thales, Anaximenes, Hipparchus, Empedocles, Aristarchus, Pythagoras, Cœnopides, had anticipated them; each had the same tense geometrical brain, apt for the same vigorous computation and logic, a mind parallel to the movement of the world. The Roman mile probably rested on a measure of a degree of the meridian. Mahometan and Chinese know what we know

of leap-year, of the Gregorian calendar, and of the precession of the equinoxes. As, in every barrel of cowries, brought to New Bedford, there shall be one *orangia*, so there will, in a dozen millions of Malays and Mahometans, be one or two astronomical skulls. In a large city, the most casual things, and things whose beauty lies in their casualty, are produced as punctually and to order as the baker's muffin for breakfast. Punch makes exactly one capital joke a week; and the journals contrive to furnish one good piece of news every day.

And not less work the laws of repression, the penalties of violated functions. Famine, typhus, frost, war, suicide, and effete races, must be reckoned calculable parts of the system of the world.

These are pebbles from the mountain, hints of the terms by which our life is walled up, and which show a kind of mechanical exactness, as of a loom or mill, in what we call casual or fortuitous events.

The force with which we resist these torrents of tendency look so ridiculously inadequate, that it amounts to little more than a criticism or a protest made by a minority of one, under compulsion of millions. I seemed, in the height of a tempest, to see men overboard struggling in the waves, and driven about here and there. They glanced intelligently at each other, but 'twas little they could do for one another; 'twas much if each could keep afloat alone. Well, they had a right to their eye-beams, and all the rest was Fate.

We cannot trifle with this reality, this cropping out in our planted gardens of the core of the world. No picture of life can have any veracity that does not admit the odious facts. A man's power is hooped in by a necessity, which, by many experiments, he touches on every side, until he learns its arc.

The element running through entire nature, which we popularly call Fate, is known to us as limitation. Whatever limits us, we call Fate. If we are brute and barbarous, the fate takes a brute and dreadful shape. As we refine, our checks become finer. If we rise to spiritual culture, the antagonism takes a spiritual form. In the Hindoo fables, Vishnu follows Maya through all her ascending changes, from insect and crawfish up to elephant; whatever form she took, he took the male form of that kind, until she became at last woman and goddess, and he a man and a god. The limitations refine as the soul purifies, but the ring of necessity is always perched at the top.

When the gods in the Norse heaven were unable to bind the Fenris Wolf with steel or with weight of mountains—the one he snapped and the other he spurned with his heel—they put round his foot a limp band softer than silk or cobweb, and this held him: the more he spurned it, the stiffer it drew. So soft and so stanch is the ring of Fate. Neither brandy, nor nectar, nor sulphuric ether, nor hell-fire, nor ichor, nor poetry, nor genius, can get rid of this limp band. For

if we give it the high sense in which the poets use it, even thought itself is not above Fate: that too must act according to eternal laws, and all that is wilful and fantastic in it is in opposition to its fundamental essence.

And, last of all, high over thought, in the world of morals, Fate appears as vindicator, levelling the high, lifting the low, requiring justice in man, and always striking soon or late, when justice is not done. What is useful will last; what is hurtful will sink. "The doer must suffer," said the Greeks: "you would soothe a Deity not to be soothed." "God himself cannot procure good for the wicked," said the Welsh triad. "God may consent, but only for a time," said the bard of Spain. The limitation is impassable by any insight of man. In its last and loftiest ascensions, insight itself, and the freedom of the will, is one of its obedient members. But we must not run into generalisations too large, but show the natural bounds or essential distinctions, and seek to do justice to the other elements as well.

Thus we trace Fate, in matter, mind, and morals—in race, in retardations of strata, and in thought and character as well. It is everywhere bound or limitation. But fate has its lord; limitation its limits; is different seen from above and from below; from within and from without. For, though Fate is immense, so is power, which is the other fact in the dual world, immense. If Fate follows and limits power, power attends and antagonises Fate. We must respect Fate as natural history, but there is more than natural history. For who and what is this criticism that pries into the matter? Man is not order of nature, sack and sack, belly and members, link in a chain, nor any ignominious baggage, but a stupendous antagonism, a dragging together of the poles of the Universe. He betrays his relation to what is below him—thick-skulled, small-brained, fishy, quadrumanous—quadruped ill-disguised, hardly escaped into biped, and has paid for the new powers by loss of some of the old ones. But the lightning which explodes and fashions planets, maker of planets and suns, is in him. On one side, elemental order, sandstone and granite, rock-ledges, peat-bog, forest, sea and shore; and, on the other part, thought, the spirit which composes and decomposes nature—here they are, side by side, god and devil, mind and matter, king and conspirator, belt and spasm, riding peacefully together in the eye and brain of every man.

Nor can he blink the freewill, To hazard the contradiction—freedom is necessary. If you please to plant yourself on the side of Fate, and say, Fate is all; then we say, a part of Fate is the freedom of man. For ever wells up the impulse of choosing and acting in the soul. Intellect annuls Fate. So far as a man thinks, he is free. And though nothing is more disgusting than the crowing about liberty

by slaves, as most men are, and the flippant mistaking for freedom of some paper preamble like a "Declaration of Independence," or the statute right to vote, by those who have never dared to think or to act, yet it is wholesome to man to look not at Fate, but the other way: the practical view is the other. His sound relation to these facts is to use and command, not to cringe to them. "Look not on nature, for her name is fatal," said the oracle. The too much contemplation of these limits induces meanness. They who talk much of destiny, their birth-star, etc., are in a lower dangerous plane, and invite the evils they fear.

I cited the instinctive and heroic races as proud believers in Destiny. They conspire with it; a loving resignation is with the event. But the dogma makes a different impression, when it is held by the weak and lazy. 'Tis weak and vicious people who cast the blame on Fate. The right use of Fate is to bring up our conduct to the loftiness of nature. Rude and invincible except by themselves are the elements. So let man be. Let him empty his breast of his windy conceits, and show his lordship by manners and deeds on the scale of nature. Let him hold his purpose as with the tug of gravitation. No power, no persuasion, no bribe shall make him give up his point. A man ought to compare advantageously with a river, an oak, or a mountain. He shall have not less the flow, the expansion, and the resistance of these.

'Tis the best use of Fate to teach a fatal courage. Go face the fire at sea, or the cholera in your friend's house, or the burglar in your own, or what danger lies in the way of duty, knowing you are guarded by the cherubim of Destiny. If you believe in Fate to your harm, believe it, at least, for your good.

For, if Fate is so prevailing, man also is part of it, and can confront fate with fate. If the Universe have these savage accidents, our atoms are as savage in resistance. We should be crushed by the atmosphere, but for the reaction of the air within the body. A tube made of a film of glass can resist the shock of the ocean, if filled with the same water. If there be omnipotence in the stroke, there is omnipotence of recoil.

1. But Fate against Fate is only parrying and defence: there are, also, the noble creative forces. The revelation of Thought takes man out of servitude into freedom. We rightly say of ourselves, we were born, and afterward we were born again, and many times. We have successive experiences so important, that the new forgets the old, and hence the mythology of the seven or the nine heavens. The day of days, the great day of the feast of life, is that in which the inward eye opens to the Unity in things, to the omnipresence of law;—sees that what is must be, and ought to be, or is the best. This beatitude dips from on high down on us, and we see. It is not in us so

much as we are in it. If the air come to our lungs, we breathe and live; if not, we die. If the light come to our eyes, we see; else not. And if truth come to our mind, we suddenly expand to its dimensions, as if we grew to worlds. We are as lawgivers; we speak for Nature; we prophecy and divine.

This insight throws us on the party and interest of the Universe, against all and sundry; against ourselves, as much as others. A man speaking from insight affirms of himself what is true of the mind: seeing its immortality, he says, I am immortal; seeing its invincibility, he says, I am strong. It is not in us, but we are in it. It is of the maker, not of what is made. All things are touched and changed by it. This uses, and is not used. It distances those who share it, from those who share it not. Those who share it not are flocks and herds. It dates from itself; not from former men or better men—gospel, or constitution, or college, or custom. Where it shines, Nature is no longer intrusive, but all things make a musical or pictorial impression. The world of men show like a comedy without laughter:—populations, interests, government, history;—'tis all toy figures in a toy house. It does not overvalue particular truths. We hear eagerly every thought and word quoted from an intellectual man. But, in his presence, our own mind is roused to activity, and we forget very fast what he says, much more interested in the new play of our own thought, than in any thought of his. 'Tis the majesty into which we have suddenly mounted, the impersonality, the scorn of egotisms, the sphere of laws, that engage us. Once we were stepping a little this way, and a little that way; now, we are as men in a balloon, and do not think so much of the point we have left, or the point we would make, as of the liberty and glory of the way.

Just as much intellect as you add, so much organic power. He who sees through the design, presides over it, and must will that which must be. We sit and rule, and, though we sleep, our dream will come to pass. Our thought, though it were only one hour old, affirms an oldest necessity, not to be separated from thought, and not to be separated from will. They must always have co-existed. It apprises us of its sovereignty and godhead, which refuse to be severed from it. It is not mine or thine, but the will of all mind. It is poured into the souls of all men, as the soul itself which constitutes them men. I know not whether there be, as is alleged, in the upper region of our atmosphere, a permanent westerly current, which carries with it all atoms which rise to that height, but I see, that when souls reach a certain clearness of perception, they accept a knowledge and motive above selfishness. A breath of will blows eternally through the universe of souls in the direction of the Right and Necessary. It is the air which all intellects inhale and exhale, and it is the wind which blows the worlds into order and orbit.

Thought dissolves the material universe, by carrying the mind up into a sphere where all is plastic. Of two men, each obeying his own thought, he whose thought is deepest will be the strongest character. Always one man more than another represents the will of Divine Providence to the period.

2. If thought makes free, so does the moral sentiment. The mixtures of spiritual chemistry refuse to be analysed. Yet we can see that with the preception of truth is joined the desire that it shall prevail. That affection is essential to will. Moreover, when a strong will appears, it usually results from a certain unity of organisation, as if the whole energy of body and mind flowed in one direction. All great force is real and elemental. There is no manufacturing a strong will. There must be a pound to balance a pound. Where power is shown in will, it must rest on the universal force. Alaric and Bonaparte must believe they rest on a truth, or their will can be bought or bent. There is a bribe possible for any finite will. But the pure sympathy with universal ends is an infinite force, and cannot be bribed or bent. Whoever has had experience of the moral sentiment cannot choose but believe in unlimited power. Each pulse from that heart is an oath from the Most High. I know not what the word sublime means, if it be not the intimations in this infant of a terrific force. A text of heroism, a name and anecdote of courage, are not arguments, but sallies of freedom. One of these is the verse of the Persian Hafiz, "'Tis written on the gate of Heaven, 'Woe unto him who suffers himself to be betrayed by Fate!'" Does the reading of history make us fatalists? What courage does not the opposite opinion show! A little whim of will to be free gallantly contending against the universe of chemistry.

But insight is not will, nor is affection will. Perception is cold, and goodness dies in wishes; as Voltaire said, 'tis the misfortune of worthy people that they are cowards; "*un des plus grands malheurs des honnêtes gens c'est qu'ils sont des lâches.*" There must be a fusion of these two to generate the energy of will. There can be no driving force, except through the conversion of the man into his will, making him the will, and the will him. And one may say boldly, that no man has a right perception of any truth, who has not been re-acted on by it, so as to be ready to be its martyr.

The one serious and formidable thing in nature is a will. Society is servile from want of will, and therefore the world wants saviours and religions. One way is right to go: the hero sees it, and moves on that aim, and has the world under him for root and support. He is to others as the world. His approbation is honour; his dissent, infamy. The glance of his eye has the force of sunbeams. A personal influence towers up in memory only worthy, and we gladly forget numbers, money, climate, gravitation, and the rest of Fate.

We can afford to allow the limitation, if we know it is the meter of the growing man. We stand against Fate, as children stand up against the wall in their father's house, and notch their height from year to year. But when the boy grows to man, and is master of the house, he pulls down that wall, and builds a new and bigger. 'Tis only a question of time. Every brave youth is in training to ride, and rule this dragon. His science is to make weapons and wings of these passions and retarding forces. Now, whether, seeing these two things, fate and power, we are permitted to believe in unity? The bulk of mankind believe in two gods. They are under one dominion here in the house, as friend and parents, in social circles, in letters, in art, in love, in religion: but in mechanics, in dealing with steam and climate, in trade, in politics, they think they come under another; and that it would be a practical blunder to transfer the method and way of working of one sphere into the other. What good, honest, generous men at home, will be wolves and foxes on change! What pious men in the parlour will vote for what reprobates at the polls! To a certain point, they believe themselves the care of a Providence. But in a steamboat, in an epidemic, in war, they believe a malignant energy rules.

But relation and connection are not somewhere, and sometimes, but everywhere and always. The divine order does not stop where their sight stops. The friendly power works on the same rules, in the next farm and the next planet. But where they have not experience, they run against it, and hurt themselves. Fate, then, is a name for facts not yet passed under the fire of thought—for causes which are unpenetrated.

But every jet of chaos which threatens to exterminate us, is convertible by intellect into wholesome force. Fate is unpenetrated causes. The water drowns ship and sailor, like a grain of dust. But learn to swim, trim your bark, and the wave which drowned it will be cloven by it, and carry it, like its own foam, a plume and a power. The cold is inconsiderate of persons, tingles your blood, freezes a man like a dew-drop. But learn to skate, and the ice will give you a graceful, sweet, and poetic motion. The cold will brace your limbs and brain to genius, and make you foremost men of time. Cold and sea will train an imperial Saxon race, which nature cannot bear to lose, and, after cooping it up for a thousand years in yonder England, gives a hundred Englands, a hundred Mexicos. All the bloods it shall absorb and domineer: and more than Mexicos—the secrets of water and steam, the spasms of electricity, the ductility of metals, the chariot of the air, the ruddered balloon, are awaiting you.

The annual slaughter from typhus far exceeds that of war; but right drainage destroys typhus. The plague in the sea-service from scurvy is healed by lemon juice and other diets portable or procur-

able; the depopulation by cholera and small-pox is ended by drainage and vaccination; and every other pest is not less in the chain of cause and effect, and may be fought off. And, whilst art draws out the venom, it commonly extorts some benefits from the vanquished enemy. The mischievous torrent is taught to drudge for man: the wild beasts he makes useful for food, or dress, or labour; the chemic explosions are controlled like his watch. These are now the steeds on which he rides. Man moves in all modes, by legs of horses, by wings of wind, by steam, by gas of balloon, by electricity, and stands on tiptoe threatening to hunt the eagle in his own element. There is nothing he will not make his carrier.

Steam was, till the other day, the devil which we dreaded. Every pot made by any human potter or brazier had a hole in its cover, to let off the enemy, lest he should lift pot and roof, and carry the house away. But the Marquis of Worcester, Watt, and Fulton bethought themselves that, where was power was not devil, but was God; that it must be availed of, and not by any means let off and wasted. Could he lift pots and roofs and houses so handily? he was the workman they were in search of. He could be used to lift away, chain, and compel other devils, far more reluctant and dangerous, namely, cubic miles of earth, mountains, weight or resistance of water, machinery, and the labours of all men in the world; and time he shall lengthen, and shorten space.

It has not fared much otherwise with higher kinds of steam. The opinion of the million was the terror of the world, and it was attempted, either to dissipate it, by amusing nations, or to pile it over with strata of society—a layer of soldiers; over that, a layer of lords; and a king on the top; with clamps and hoops of castles, garrisons, and police. But, sometimes, the religious principle would get in, and burst the hoops, and rive every mountain laid on top of it. The Fultons and Watts of politics, believing in unity, saw that it was a power, and, by satisfying it (as justice satisfies everybody), through a different disposition of society—grouping it on a level, instead of piling it into a mountain—they have contrived to make of this terror the most harmless and energetic form of a State.

Very odious, I confess, are the lessons of Fate. Who likes to have a dapper phrenologist pronouncing on his fortunes? Who likes to believe that he has hidden in his skull, spine, and pelvis, all the vices of a Saxon or Celtic race, which will be sure to pull him down—with what grandeur of hope and resolve he is fired—into a selfish, huckstering, servile, dodging animal? A learned physician tells us, the fact is invariable with the Neapolitan that, when mature, he assumes the form of the unmistakable scoundrel. That is a little overstated—but may pass.

But these are magazines and arsenals. A man must thank his de-

fects, and stand in some terror of his talents. A transcendent talent draws so largely on his forces, as to lame him; a defect pays him revenues on the other side. The sufferance, which is the badge of the Jew, has made him, in these days, the ruler of the earth. If Fate is ore and quarry, if evil is good in the making, if limitation is power that shall be, if calamities, oppositions, and weights are wings and means—we are reconciled.

Fate involves the melioration. No statement of the universe can have any soundness, which does not admit its ascending effort. The direction of the whole, and of the parts, is toward benefit, and in proportion to the health. Behind every individual closes organization: before him opens liberty—the better, the best. The first and worst races are dead. The second and imperfect races are dying out, or remain for the maturing of higher. In the latest race, in man, every generosity, every new perception, the love and praise he extorts from his fellows, are certificates of advance out of fate into freedom. Liberation of the will from the sheaths and clogs of organisation which he has outgrown, is the end and aim of this world. Every calamity is a spur and valuable hint; and where his endeavours do not yet fully avail, they tell as tendency. The whole circle of animal life—tooth against tooth—devouring war, war for food, a yelp of pain and a grunt of triumph, until, at last, the whole menagerie, the whole chemical mass, is mellowed and refined for higher use—pleases at a sufficient perspective.

But to see how fate slides into freedom, and freedom into fate, observe how far the roots of every creature run, or find, if you can, a point where there is no thread of connection. Our life is consentaneous and far-related. This knot of nature is so well tied, that nobody was ever cunning enough to find the two ends. Nature is intricate, overlapped, interweaved, and endless. Christopher Wren said of the beautiful King's College chapel, "that, if anybody would tell him where to lay the first stone, he would build such another." But where shall we find the first atom in this house of man, which is all consent, inosculation, and balance of parts?

The web of relation is shown in habitat, shown in hybernation. When hybernation was observed, it was found, that, whilst some animals become torpid in winter, others were torpid in summer: hybernation then was a false name. The long sleep is not an effect of cold, but is regulated by the supply of food proper to the animal. It becomes torpid when the fruit or prey it lives on is not in season, and regains its activity when its food is ready.

Eyes are found in light; ears in auricular air; feet on land; fins in water; wings in air; and each creature where it was meant to be, with a mutual fitness. Every zone has its own Fauna There is ad-

justment between the animal and its food, its parasite, its enemy. Balances are kept. It is not allowed to diminish in numbers, nor to exceed. The like adjustments exist for man. His food is cooked when he arrives; his coal in the pit; the house ventilated; the mud of the deluge dried; his companions arrived at the same hour, and awaiting him with love, concert, laughter, and tears. These are coarse adjustments, but the invisible are not less. There are more belongings to every creature than his air and his food. His instincts must be met, and he has predisposing power that bends and fits what is near him to his use. He is not possible until the invisible things are right for him, as well as the visible. Of what changes, then, in sky and earth, and in finer skies and earths, does the appearance of some Dante or Columbus apprise us!

How is this effected? Nature is no spendthrift, but takes the shortest way to her ends. As the general says to his soldiers, "If you want a fort, build a fort," so nature makes every creature do its own work and get its living—is it planet, animal, or tree. The planet makes itself. The animal makes itself;—then, what it wants. Every creature,—wren or dragon,—shall make its own lair. As soon as there is life, there is self-direction, and absorbing and using of material. Life is freedom,—life in the direct ratio of its amount. You may be sure, the new-born man is not inert. Life works both voluntarily and supernaturally in its neighbourhood. Do you suppose he can be estimated by his weight in pounds, or that he is contained in his skin,—this reaching, radiating, jaculating fellow? The smallest candle fills a mile with its rays, and the papillæ of a man run out to every star.

When there is something to be done the world knows how to get it done. The vegetable eye makes leaf, pericarp, root, bark, or thorn, as the need is; the first cell converts itself into stomach, mouth, nose, or nail, according to the want; the world throws its life into a hero or a shepherd; and puts him where he is wanted. Dante and Columbus were Italians in their time: they would be Russians or Americans to-day. Things ripen, new men come. The adaptation is not capricious. The ulterior aim, the purpose beyond itself, the correlation by which planets subside and crystallise, then animate beasts and men, will not stop, but will work into finer particulars, and from finer to finest.

The secret of the world is, the tie between person and event. Person makes event and event person. The "times," "the age," what is that, but a few profound persons and a few active persons who epitomise the times?—Goethe, Hegel, Metternich, Adams, Calhoun, Guizot, Peel, Cobden, Kossuth, Rothschild, Astor, Brunel, and the rest. The same fitness must be presumed between a man and the time, an event, as between the sexes, or between a race of animals and the food it eats, or the inferior races it uses. He thinks his

fate alien, because the copula is hidden. But the soul contains the event that shall befall it, for the event is only the actualisation of its thoughts; and what we pray to ourselves for is always granted. The event is the print of your form. It fits you like your skin. What each does is proper to him. Events are the children of his body and mind. We learn that the soul fate is the soul of us, as Hafiz sings—

“Alas till now I had not known,
My guide and fortunes’s guide are one.”

All the toys that infatuate men, and which they play for,—houses, land, money, luxury, power, fame,—are the selfsame thing, with a new gauze or two of illusion overlaid. And of all the drums and rattles by which men are made willing to have their heads broke, and are led out solemnly every morning to parade,—the most admirable is this by which we are brought to believe that events are arbitrary, and independent of actions. At the conjuror’s we detect the hair by which he moves his puppet, but we have not eyes sharp enough to descry the thread that ties cause and effect.

Nature magically suits the man to his fortunes, by making these the fruit of his character. Ducks take to the water, eagles to the sky, waders to the sea margin, hunters to the forest, clerks to counting-rooms, soldiers to the frontier. Thus events grow on the same stem with persons; are sub-persons. The pleasure of life is according to the man that lives it, and not according to the work or the place. Life is an ecstasy. We know what madness belongs to love,—what power to paint a vile object in hues of heaven. As insane persons are indifferent to their dress, diet, and other accommodations, and, as we do in dreams, with equanimity, the most absurd acts, so, a drop more of wine in our cup of life will reconcile us to strange company and work. Each creature puts forth itself its own condition and sphere, as the slug sweats out its slimy house on the pear-leaf, and the woolly aphides on the apple perspire their own bed, and the fish its shell. In youth, we clothe ourselves with rainbows, and go as brave as the zodiac. In age, we put out another sort of perspiration, —gout, fever, rheumatism, caprice, doubt, fretting, and avarice.

A man’s fortunes are the fruit of his character. A man’s friends are his magnetisms. We go to Herodotus and Plutarch for examples of Fate; but we are examples. “*Quisque suos patimur manes.*” The tendency of every man to enact all that is in his constitution is expressed in the old belief, that the efforts which we make to escape from our destiny only serve to lead us into it: and I have noticed, a man likes better to be complimented on his position, as the proof of the last or total excellence, than on his merits.

A man will see his character emitted in the events that seem to meet, but which exude from and accompany him. Events expand with

the character. As once he found himself among toys, so now he plays a part in colossal systems, and his growth is declared in his ambition, companions, and his performance. He looks like a piece of luck, but is a piece of causation;—the mosaic, angulated and ground to fit into the gap he fills. Hence in each town there is some man who is, in his brain and performance, an explanation of the tillage, production, factories, banks, churches, ways of living, and society, of that town. If you do not chance to meet him, all that you see will leave you a little puzzled: if you see him, it will become plain. We know in Massachusetts who built New Bedford, who built Lynn, Lowell, Lawrence, Clinton, Fitchburg, Holyoke, Portland, and many another noisy mart. Each of these men, if they were transparent, would seem to you not so much men, as walking cities, and, wherever you put them, they would build one.

History is the action and reaction of these two,—Nature and Thought;—two boys pushing each other on the curbstone of the pavement. Everything is pusher or pushed: and matter and mind are in perpetual tilt and balance so. Whilst the man is weak, the earth takes up him. He plants his brain and affections. By-and-by he will take up the earth, and have his gardens and vineyards in the beautiful order and productiveness of his thought. Every solid in the universe is ready to become fluid on the approach of the mind, and the power to flux it is the measure of the mind. If the wall remain adamant, it accuses the want of thought. To a subtler force, it will stream into new forms, expressive of the character of the mind. What is the city in which we sit here, but an aggregate of incongruous materials, which have obeyed the will of some man? The granite was reluctant, but his hands were stronger, and it came. Iron was deep in the ground, and well combined with stone, but could not hide from his fires. Wood, lime, stuffs, fruits, gums, were dispersed over earth and sea, in vain. Here they are, within reach of every man's day-labour,—what he wants of them. The whole world is the flux of matter over the wires of thought to the poles or points where it would build. The races of men rise out of the ground preoccupied with a thought which rules them, and divided into parties ready armed and angry to fight for this metaphysical abstraction. The quality of the thought differences the Egyptian and the Roman, the Austrian and the American. The men who come on the stage at one period are all found to be related to each other. Certain ideas are in the air. We are all impressionable, for we are made of them; all impressionable, but some more than others, and these first express them. This explains the curious contemporaneousness of inventions and discoveries. The truth is in the air, and the most impressionable brain will announce it first, but all will announce it a few min-

utes later. So women, as most susceptible, are the best index of the coming hour. So the great man, that is, the man most imbued with the spirit of the time, is the impressionable man,—of a fibre irritable and delicate, like iodine to light. He feels the infinitesimal attractions. His mind is righter than others, because he yields to a current so feeble as can be felt only by a needle delicately poised.

The correlation is shown in defects. Möller, in his "Essay on Architecture," taught that the building which was fitted accurately to answer its end, would turn out to be beautiful, though beauty had not been intended. I find the like unity in human structures rather virulent and pervasive; that a crudity in the blood will appear in the argument; a hump in the shoulder will appear in the speech and handiwork. If his mind could be seen, the hump would be seen. If a man has a seesaw in his voice, it will run into his sentences, into his poem, into the structure of his fable, into his speculation, into his charity. And, as every man is hunted by his own *dæmon*, vexed by his own disease, this checks all his activity.

So each man, like each plant, has his parasites. A strong, astringent, bilious nature, has more truculent enemies than the slugs and moths that fret my leaves. Such an one has curculios, borers, knife-worms: a swindler ate him first, then a client, then a quack, then a smooth, plausible gentleman, bitter and selfish as Moloch.

This correlation really existing can be divined. If the threads are there, thought can follow and show them. Especially when a soul is quick and docile; as Chaucer sings—

"Or if the soul of proper kind
Be so perfect as men find,
That it wot what is to come,
And that he warneth all and some,
Of every of their adventures,
By previsions or figures;
But that our flesh hath not might
It to understand aright,
For it is warned too darkly."

Some people are made up of rhyme, coincidence, omen, periodicity, and presage: they meet the person they seek: what their companion prepares to say to them, they first say to him; and a hundred signs apprise them of what is about to befall.

Wonderful intricacy in the web, wonderful constancy in the design, this vagabond life admits. We wonder how the fly finds its mate, and yet year after year we find two men, two women, without legal or carnal tie, spend a great part of their best time within a few feet of each other. And the moral is, that what we seek we shall find; what we flee from flees from us; as Goethe said, "what we wish for

in youth, comes in heaps on us in old age," too often cursed with the granting of our prayer: and hence the high caution, that, since we are sure of having what we wish, we beware to ask only for high things.

One key, one solution to the mysteries of human condition, one solution to the old knots of fate, freedom, and foreknowledge, exists, the propounding, namely, of the double consciousness. A man must ride alternately on the horses of his private and his public nature, as the equestrians in the circus throw themselves nimbly from horse to horse, or plant one foot on the back of one, and the other foot on the back of the other. So when a man is the victim of his fate, has sciatica in his loins, and cramp in his mind; a club-foot and a club in his wit; a sour face, and a selfish temper; a strut in his gait, and a conceit in his affection; or is ground to powder by the vice of his race; he is to rally on his relation to the universe which his ruin benefits. Leaving the dæmon who suffers, he is to take sides with the Deity who secures universal benefit by his pain.

To offset the drag of temperament and race, which pulls down, learn this lesson—namely, that by the cunning co-presence of two elements, which is throughout nature, whatever lames or paralyses you, draws in with the divinity, in some form, to repay. A good intention clothes itself with sudden power. When a god wishes to ride, any chip or pebble will bud and shoot out winged feet, and serve him for a horse.

Let us build altars to the Blessed Unity which holds nature and souls in perfect solution, and compels every atom to serve an universal end. I do not wonder at a snow-flake, a shell, a summer landscape, or the glory of the stars; but at the necessity of beauty under which the universe lies; that all is and must be pictorial; that the rainbow, and the curve of the horizon, and the arch of the blue vault, are only results from the organism of the eye. There is no need for foolish amateurs to fetch me to admire a garden of flowers, or a sun-gilt cloud, or a waterfall, when I cannot look without seeing splendour and grace. How idle to choose a random sparkle here or there, when the indwelling necessity plants the rose of beauty on the brow of chaos, and discloses the central intention of nature to be harmony and joy.

Let us build altars to the Beautiful Necessity. If we thought men were free in the sense that in a single exception one fantastical will could prevail over the law of things, it were all one as if a child's hand could pull down the sun. If, in the least particular, one could derange the order of nature,—who would accept the gift of life?

Let us build altars to the Beautiful Necessity, which secures that all is made of one piece; that plaintiff and defendant, friend and enemy, animal and planet, food and eater, are of one kind. In astronomy

is vast space, but no foreign system; in geology, vast time, but the same laws as to-day. Why should we be afraid of nature, which is no other than "philosophy and theology embodied?" Why should we fear to be crushed by savage elements, we who are made up of the same elements? Let us build to the Beautiful Necessity, which makes man brave in believing that he cannot shun a danger that is appointed, nor incur one that is not, to the Necessity which rudely or softly educates him to the perception that there are no contingencies; that Law rules throughout existence, a Law which is not intelligent but intelligence,—not personal nor impersonal,—it disdains words and passes understanding; it dissolves persons; it vivifies nature; yet solicits the pure in heart to draw on all its omnipotence.

X—CULTURE

Can rules or tutors educate
 The semigod whom we await?
 He must be musical,
 Tremulous, impressional,
 Alive to gentle influence
 Of landscape and of sky,
 And tender to the spirit-touch
 Of man's or maiden's eye:
 But, to his native centre fast,
 Shall into Future fuse the Past,
 And the world's flowing fates in his own mould recast.

THE word of ambition at the present day is Culture. Whilst all the world is in pursuit of power, and of wealth as a means of power, culture corrects the theory of success. A man is the prisoner of his power. A topical memory makes him an almanac; a talent for debate, a disputant; skill to get money makes him a miser, that is, a beggar. Culture reduces these inflammations by invoking the aid of other powers against the dominant talent, and by appealing to the rank of powers. It watches success. For performance, Nature has no mercy, and sacrifices the performer to get it done; makes a dropsy or a tympany of him. If she wants a thumb, she makes one at the cost of arms and legs, and any excess of power in one part is usually paid for at once by some defect in a contiguous part.

Our efficiency depends so much on our concentration, that Nature usually in the instances where a marked man is sent into the world, overloads him with bias, sacrificing his symmetry to his working powers. It is said, no man can write but one book; and if a man have a defect, it is apt to leave its impression on all his performances. If she creates a policeman like Fouché, he is made up of suspicions

and of plots to circumvent them. "The air," said Fouché, "is full of poniards." The physician Sanctorius spent his life in a pair of scales, weighing his food. Lord Coke valued Chaucer highly, because the Canon Yeman's Tale Illustrates the statute Hen. V. Chap. 4, against alchemy. I saw a man who believed the principal mischiefs in the English state were derived from the devotion to musical concerts. A freemason, not long since, set out to explain to this country that the principal cause of the success of General Washington was the aid he derived from the freemasons.

But worse than the harping on one string, Nature has secured individualism by giving the private person a high conceit of his weight in the system. The pest of society is egotists. There are dull and bright, sacred and profane, coarse and fine egotists. 'Tis a disease that, like influenza, falls on all constitutions. In the distemper known to physicians as chorea, the patient sometimes turns round, and continues to spin slowly on one spot. Is egotism a metaphysical varioloid of this malady? The man runs round a ring formed by his own talent, falls into an admiration of it, and loses relation to the world. It is a tendency in all minds. One of its annoying forms is a craving for sympathy. The sufferers parade their miseries, tear the lint from their bruises, reveal their indictable crimes, that you may pity them. They like sickness, because physical pain will extort some show of interest from the bystanders, as we have seen children, who, finding themselves of no account when grown people come in, will cough till they choke, to draw attention.

This distemper is the scourge of talent, of artists, inventors, and philosophers. Eminent spiritualists shall have an incapacity of putting their act or word aloof from them, and seeing it bravely for the nothing it is. Beware of the man who says, "I am on the eve of a revelation." It is speedily punished, inasmuch as this habit invites men to humour it, and by treating the patient tenderly, to shut him up in a narrower selfism, and exclude him from the great world of God's cheerful fallible men and women. Let us rather be insulted, whilst we are insultable. Religious literature has eminent examples, and if we run over our private list of poets, critics, philanthropists, and philosophers, we shall find them infected with this dropsy and elephantiasis, which we ought to have tapped.

This goitre of egotism is so frequent among notable persons that we must infer some strong necessity in Nature which it subserves; such as we see in the sexual attraction. The preservation of the species was a point of such necessity, that Nature has secured it at all hazards by immediately overloading the passion, at the risk of perpetual crime and disorder. So egotism has its root in the cardinal necessity by which each individual persists to be what he is.

This individuality is not only inconsistent with culture, but is the

basis of it. Every valuable nature is there in its own right, and the student we speak to must have a mother-wit invincible by his culture, which uses all books, arts, facilities, and elegances of intercourse, but is never subdued and lost in them. He only is a well-made man who has a good determination. And the end of culture is not to destroy this, God forbid! but to train away all impediment and mixture, and leave nothing but pure power. Our student must have a style and determination, and be a master of his own speciality. But, having this, he must put it behind him. He must have a catholicity, a power to see with a free and disengaged look every object. Yet is this private interest and self so overcharged, that, if a man seeks a companion who can look at objects for their own sake, and without affection or self-reference, he will find the fewest who will give him that satisfaction; whilst most men are afflicted with a coldness, an incuriosity, as soon as any object does not connect with their self-love. Though they talk of the object before them, they are thinking of themselves, and their vanity is laying little traps for your admiration.

But after a man has discovered that there are limits to the interest which his private history has for mankind, he still converses with his family, or a few companions,—perhaps with half a dozen personalities that are famous in his neighbourhood. In Boston, the question of life is the names of some eight or ten men. Have you seen Mr. Allston, Doctor Channing, Mr. Adams, Mr. Webster, Mr. Greenough? Have you heard Everett, Garrison, Father Taylor, Theodore Parker? Have you talked with Messieurs Turbinewheel, Summitlevel, and Lacofrupees? Then you may as well die. In New York, the question is of some other eight, or ten, or twenty. Have you seen a few lawyers, merchants, and brokers,—two or three scholars, two or three capitalists, two or three editors of newspapers? New York is a sucked orange. All conversation is at an end, when we have discharged ourselves of a dozen personalities, domestic or imported, which make up our American existence. Nor do we expect anybody to be other than a faint copy of these heroes.

Life is very narrow. Bring any club or company of intelligent men together again after ten years, and if the presence of some penetrating and calming genius could dispose them to frankness, what a confession of insanities would come up! The "causes" to which we have sacrificed, Tariff or Democracy, Whiggism or Abolition, Temperance or Socialism, would show like roots of bitterness and dragons of wrath; and our talents are as mischievous as if each had been seized upon by some bird of prey, which had whisked him away from fortune, from truth, from the dear society of the poets, some zeal, some bias, and only when he was now grey and nerveless was it relaxing its claws, and he awaking to sober perceptions.

Culture is the suggestion from certain best thoughts, that a man has a range of affinities, through which he can modulate the violence of any master-tones that have a droning preponderance in his scale, and succor him against himself. Culture redresses his balance, puts him among his equals and superiors, revives the delicious sense of sympathy, and warns him of the dangers of solitude and repulsion.

'Tis not a compliment but a disparagement to consult a man only on horses, or on steam, or on theatres, or on eating, or on books, and, whenever he appears, considerately to turn the conversation to the bantling he is known to fondle. In the Norse heaven of our forefathers, Thor's house had five hundred and forty floors; and man's house has five hundred and forty floors. His excellence is facility of adaptation and of transition through many related points, to wide contrasts and extremes. Culture kills his exaggeration, his conceit of his village or his city. We must leave our pets at home, when we go into the street, and meet men on broad grounds of good meaning and good sense. No performance is worth loss of geniality. 'Tis a cruel price we pay for certain fancy goods called fine arts and philosophy. In the Norse legend, Allfadir did not get a drink of Mimir's spring (the fountain of wisdom) until he left his eye in pledge. And here is a pedant that cannot unfold his wrinkles, nor conceal his wrath at interruption by the best, if their conversation do not fit his impertinency,—here is he to afflict us with his personalities. 'Tis incident to scholars, that each of them fancies he is pointedly odious in his community. Draw him out of this limbo of irritability. Cleanse with healthy blood his parchment skin. You restore to him his eyes which he left in pledge at Mimir's spring. If you are a victim of your doing, who cares what you do? We can spare your opera, your gazetteer, your chemic analysis, your history, your syllogisms. Your man of genius pays dear for his distinction. His head runs up into a spire, and instead of a healthy man, merry and wise, he is some mad dominie. Nature is reckless of the individual. When she has points to carry, she carries them. To wade in marshes and sea-margins is the destiny of certain birds, and they are so accurately made for this, that they are imprisoned in those places. Each animal out of its habitat would starve. To the physician, each man, each woman, is an amplification of one organ. A soldier, a locksmith, a bank-clerk, and a dancer, could not exchange functions. And thus we are victims of adaptation.

The antidotes against this organic egotism are, the range and variety of attractions, as gained by acquaintance with the world, with men of merit, with classes of society, with travel, with eminent persons, and with the high resources of philosophy, art, and religion: books, travel, society, solitude.

The hardest sceptic who has seen a horse broken, a pointer

trained, or who has visited a menagerie, or the exhibition of the Industrious Fleas, will not deny the validity of education. "A boy," says Plato, "is the most vicious of all wild beasts;" and, in the same spirit, the old English poet, Gascoigne, says, "a boy is better unborn than untaught." The city breeds one kind of speech and manners; the back-country a different style; the sea another; the army a fourth. We know that an army which can be confided in, may be formed by discipline; that by systematic discipline all men may be made heroes: Marshal Lannes said to a French officer, "Know, Colonel, that none but a poltroon will boast that he never was afraid." A great part of courage is the courage of having done the thing before. And, in all human action, those faculties will be strong which are used. Robert Owen said, "Give me a tiger, and I will educate him." 'Tis inhuman to want faith in the power of education, since to meliorate in the law of nature; and men are valued precisely as they exert onward or meliorating force. On the other hand, poltroonery is the acknowledging an inferiority to be incurable.

Incapacity of melioration is the only moral distemper. There are people who can never understand a trope, or any second or expanded sense given to your words, or any humour; but remain literalists, after hearing the music, and poetry, and rhetoric, and wit, of seventy or eighty years. They are past the help of surgeon or clergy. But even these can understand pitchforks and the cry of fire; and I have noticed in some of this class a marked dislike of earthquakes.

Let us make our education brave and preventive. Politics is an after-work, a poor patching. We are always a little late. The evil is done, the law is passed, and we begin the up-hill agitation for repeal of that of which we ought to have prevented the enacting. We shall one day learn to supersede politics by education. What we call our root-and-branch reforms of slavery, war, gambling, intemperance, is only medicating the symptoms. We must begin higher up, namely, in Education.

Our arts and tools give to him who can handle them much the same advantage over the novice as if you extended his life ten, fifty, or a hundred years. And I think it the part of good sense to provide every fine soul with such culture, that it shall not, at thirty or forty years, have to say, "This which I might do is made hopeless through my want of weapons."

But it is conceded that much of our training fails of effect; that all success is hazardous and rare; that a large part of our cost and pains is thrown away. Nature takes the matter into her own hands, and, though we must not omit any jot of our system, we can seldom be sure that it has availed much, or that as much good would not have accrued from a different system.

Books, as containing the finest records of human wit, must always

enter into our notion of culture. The best heads that ever existed, Pericles, Plato, Julius Cæsar, Shakespeare, Goethe, Milton, were well-read, universally educated men, and quite too wise to undervalue letters. Their opinion has weight, because they had means of knowing the opposite opinion. We look that a great man should be a good reader, or, in proportion to the spontaneous power should be the assimilating power. Good criticism is very rare, and always precious. I am always happy to meet persons who perceive the transcendent superiority of Shakespeare over all other writers. I like people who like Plato. Because this love does not consist with self-conceit.

But books are good only as far as a boy is ready for them. He sometimes gets ready very slowly. You send your child to the schoolmaster, but 'tis the schoolboys who educate him. You send him to the Latin class, but much of his tuition comes, on his way to school, from the shop-windows. You like the strict rules and the long terms; and he finds his best leading in a by-way, of his own, and refuses any companions but of his choosing. He hates the grammar and Gradus, and loves guns, fishing-rods, horses, and boats. Well, the boy is right; and you are not fit to direct his bringing up if your theory leaves out his gymnastic training. Archery, cricket, gun and fishing-rod, horse and boat, are all educators, liberalisers; and so are dancing, dress, and the street-talk; and,—provided only the boy has resources, and is of a noble and ingenuous strain,—these will not serve him less than the books. He learns chess, whist, dancing, and theatricals. The father observes that another boy has learned algebra and geometry in the same time. But the first boy has acquired much more than these poor games along with them. He is infatuated for weeks with whist and chess; but presently will find out, as you did, that when he rises from the game too long played he is vacant and forlorn, and despises himself. Thenceforward it takes place with other things, and has its due weight in his experience. These minor skills and accomplishments—for example, dancing—are tickets of admission to the dress-circle of mankind, and the being master of them enables the youth to judge intelligently of much on which, otherwise, he would give a pedantic squint. Landor said, "I have suffered more from my bad dancing than from all the misfortunes and miseries of my life put together." Provided always the boy is teachable (for we are not proposing to make a statue out of punk), football, cricket, archery, swimming, skating, climbing, fencing, riding, are lessons in the art of power, which it is his main business to learn;—riding, specially, of which Lord Herbert of Cherbury said, "A good rider of a good horse is as much above himself and others as the world can make him." Besides, the gun, fishing-rod, boat, and horse, constitute, among all who use

them, secret freemasonries. They are as if they belonged to one club.

There is also a negative value in these arts. Their chief use to the youth is, not amusement, but to be known for what they are, and not to remain to him occasions of heartburn. We are full of superstitions. Each class fixes its eyes on the advantages it has not; the refined, on rude strength; the democrat, on birth and breeding. One of the benefits of a college education is, to show the boy its little avail. I knew a leading man in a leading city, who, having set his heart on an education at the university, and missed it, could never quite feel himself the equal of his own brothers who had gone thither. His easy superiority to multitudes of professional men could never quite countervail to him this imaginary defect. Balls, riding, wine-parties, and billiards, pass to a poor boy for something fine and romantic, which they are not; and a free admission to them on an equal footing, if it were possible, only once or twice, would be worth ten times its cost, by undeceiving him.

I am not much an advocate for travelling, and I observe that men run away to other countries because they are not good in their own, and run back to their own because they pass for nothing in the new places. For the most part, only the light characters travel. Who are you that have no task to keep you at home? I have been quoted as saying captious things about travel; but I mean to do justice. I think there is a restlessness in our people, which argues want of character. All educated Americans, first or last, go to Europe;—perhaps because it is their mental home, as the invalid habits of this country might suggest. An eminent teacher of girls said, "The idea of a girl's education is, whatever qualifies them for going to Europe." Can we never extract this tape-worm of Europe from the brain of our countrymen? One sees very well what their fate must be. He that does not fill a place at home, cannot abroad. He only goes there to hide his insignificance in a larger crowd. You do not think you will find anything there which you have not seen at home? The stuff of all countries is just the same. Do you suppose there is any country where they do not scald milkpans, and swaddle the infants, and burn the brushwood, and broil the fish? What is true anywhere is true everywhere. And let him go where he will, he can only find so much beauty or worth as he carries.

Of course, for some men, travel may be useful. Naturalists, discoverers, and sailors are born. Some men are made for courtiers, exchangers, envoys, missionaries, bearers of despatches, as others are for farmers and working men. And if the man is of a light and social turn, and nature has aimed to make a legged and winged creature, framed for locomotion, we must follow her hint, and furnish him with that breeding which gives currency, as sedulously as with

that which gives worth. But let us not be pedantic, but allow to travel its full effect. The boy grown up on the farm, which he has never left, is said in the country to have had no chance, and boys and men of that condition look upon work on a railroad, or drudgery in a city, as opportunity. Poor country boys of Vermont and Connecticut formerly owed what knowledge they had to their peddling trips to the Southern States. California and the Pacific coast is now the university of this class, as Virginia was in old times. "To have some chance" is their word. And the phrase, "to know the world," or to travel, is synonymous with all men's ideas of advantage and superiority. No doubt, to a man of sense, travel offers advantages. As many languages as he has, as many friends, as many arts and trades, so many times is he a man. A foreign country is a point of comparison wherefrom to judge his own. One use of travel is, to recommend the books and works of home (we go to Europe to be Americanised), and another, to find men. For, as nature has put fruits apart in latitudes, a new fruit in every degree, so knowledge and fine moral quality she lodges in distant men. And thus, of the six or seven teachers whom each man wants among his contemporaries, it often happens that one or two of them live on the other side of the world.

Moreover, there is in every constitution a certain solstice, when the stars stand still in our inward firmament, and when there is required some foreign force, some diversion or alternative to prevent stagnation. And, as a medical remedy, travel seems one of the best. Just as a man witnessing the admirable effect of ether to lull pain, and meditating on the contingencies of wounds, cancers, lockjaws, rejoices in Dr. Jackson's benign discovery, so a man who looks at Paris, at Naples, or at London, says, "If I should be driven from my own home, here, at least, my thoughts can be consoled by the most prodigal amusement and occupation which the human races in ages could contrive and accumulate."

Akin to the benefit of foreign travel, the æsthetic value of railroads is to unite the advantages of town and country life, neither of which we can spare. A man should live in or near a large town, because, let his own genius be what it may, it will repel quite as much of agreeable and valuable talent as it draws, and, in a city, the total attraction of all the citizens is sure to conquer, first or last, every repulsion, and drag the most improbable hermit within its walls some day in the year. In town, he can find the swimming-school, the gymnasium, the dancing-master, the shooting-gallery, opera, theatre, and panorama; the chemist's shop, the museum of natural history; the gallery of fine arts; the national orators, in their turn; foreign travellers, the libraries, and his clubs. In the country he can find solitude and reading, manly labour, cheap living, and his old shoes;

moors for game, hills for geology, and groves for devotion. Aubrey writes, "I have heard Thomas Hobbes say, that, in the Earl of Devon's house, in Derbyshire, there was a good library and books enough for him, and his lordship stored the library with what books he thought fit to be bought. But the want of good conversation was a very great inconvenience, and, though he conceived he could order his thinking as well as another, yet he found a great defect. In the country, in long time, for want of good conversation, one's understanding and invention contract a moss on them, like an old paling in an orchard."

Cities give us collision. 'Tis said London and New York take the nonsense out of a man. A great part of our education is sympathetic and social. Boys and girls who have been brought up with well-informed and superior people, show in their manners an inestimable grace. Fuller says that "William, Earl of Nassau, won a subject from the King of Spain every time he put off his hat." You cannot have one well-bred man without a whole society of such. They keep each other up to any high point. Especially women;—it requires a great many cultivated women,—saloons of bright, elegant, reading women, accustomed to ease and refinement, to spectacles, pictures, sculpture, poetry, and to elegant society, in order that you should have one Madame de Staël. The head of the commercial house, or a leading lawyer or politician, is brought into daily contact with troops of men from all parts of the country, and those too the driving-wheels, the business men of each section, and one can hardly suggest for an apprehensive man a more searching culture. Besides, we must remember the high social possibilities of a million of men. The best bribe which London offers to-day to the imagination is that, in such a vast variety of people and conditions, one can believe there is room for persons of romantic character to exist, and that the poet, the mystic, and the hero may hope to confront their counterparts.

I wish cities could teach their best lesson,—of quiet manners. It is the foible especially of American youth,—pretension. The mark of the man of the world is absence of pretension. He does not make a speech; he takes a low business-tone, avoids all brag, is nobody, dresses plainly, promises not at all, performs much, speaks in monosyllables, hugs his fact. He calls his employment by its lowest name, and so takes from evil tongues their sharpest weapon. His conversation clings to the weather and the news, yet he allows himself to be surprised into thought, and the unlocking of his learning and philosophy. How the imagination is piqued by anecdotes of some great man passing incognito, as a king in grey clothes; of Napoleon affecting a plain suit at his glittering levee; of Burns, or Scott, or Beethoven, or Wellington, or Goethe, or any container of transcend-

ent power, passing for nobody; of Epaminondas, "who never says anything, but will listen eternally;" of Goethe, who preferred trifling subjects and common expressions in intercourse with strangers, worse rather than better clothes, and to appear a little more capricious than he was. There are advantages in the old hat and box-coat. I have heard that throughout this country a certain respect is paid to good broadcloth; but dress makes a little restraint: men will not commit themselves. But the box-coat is like wine; it unlocks the tongue, and men say what they think. An old poet says:

"Go far and go sparing,
For you'll find it certain,
The poorer and baser you appear
The more you'll look through still."

Not much otherwise Milnes writes, in the *Lay of the Humble*:

"To me men are what they are
They wear no masks with me."

'Tis odd that our people should have—not water on the brain—but a little gas there. A shrewd foreigner said of the Americans, that, "Whatever they say has a little the air of a speech." Yet one of the traits down in the books as distinguishing the Anglo-Saxon, is, a trick of self-disparagement. To be sure, in old, dense countries, among a million of good coats, a fine coat comes to be no distinction, and you find humorists. In an English party, a man with no marked manners or features, with a face like red dough, unexpectedly discloses wit, learning, a wide range of topics, and personal familiarity with good men in all parts of the world, until you think you have fallen upon some illustrious personage. Can it be that the American forest has refreshed some weeds of old Pictish barbarism just ready to die out,—the love of the scarlet feather, of beads, and tinsel? The Italians are fond of red clothes, peacock plumes, and embroidery; and I remember one rainy morning in the city of Palermo, the street was in a blaze with scarlet umbrellas. The English have a plain taste. The equipages of the grandees are plain. A gorgeous livery indicates new and awkward city wealth. Mr. Pitt, like Mr. Pym, thought the title of Mister good against any king in Europe. They have piqued themselves on governing the whole world in the poor, plain, dark Committee-room which the House of Commons sat in before the fire.

Whilst we want cities as the centers where the best things are found, cities degrade us by magnifying trifles. The countryman finds the town a chop-house, a barber's shop. He has lost the lines of grandeur of the horizon, hills and plains, and with them sobriety and elevation. He has come among a supple, glib-tongued tribe, who

live for show, servile to public opinion. Life is dragged down to a fracas of pitiful cares and disasters. You say the gods ought to respect a life whose objects are their own; but in cities they have betrayed you to a cloud of insignificant annoyances:

“Mirmidons, race féconde,
Mirmidons,
Enfin nous commandons;
Jupiter livre le monde
Aux mirmidons, aux mirmidons.
“’Tis heavy odds
Against the gods,
When they will match with myrmidons.
We spawning, spawning myrmidons,
Our turn to day! we take command,
Jove gives the globe into the hand
Of myrmidons, of myrmidons.”

What is odious but noise, and people who scream and bewail? people whose vane points always east, who live to dine, who send for the doctor, who coddle themselves, who toast their feet on the register, who intrigue to secure a padded chair, and a corner out of the draught? Suffer them once to begin the enumeration of their infirmities, and the sun will go down on the unfinished tale. Let these triflers put us out of conceit with petty comforts. To a man at work, the frost is but a color: the rain, the wind, he forgot them when he came in. Let us learn to live coarsely, dress plainly, and lie hard. The least habit of dominion over the palate has certain good effects not easily estimated. Neither will we be driven into a quiddling abstemiousness. ’Tis a superstition to insist on a special diet. All is made at last of the same chemical atoms.

A man in pursuit of greatness feels no little wants. How can you mend diet, bed, dress, or salutes or compliments, or the figure you make in company, or wealth, or even the bringing of things to pass, when you think how paltry are the machinery and the workers? Wordsworth was praised to me, in Westmoreland, for having afforded to his country neighbors an example of a modest household where comfort and culture were secured, without display. And a tender boy who wears his rusty cap and out-grown coat, that he may secure the coveted place in college, and the right in the library, is educated to some purpose. There is a great deal of self-denial and manliness in poor and middle-class houses, in town, and country, that has not got into literature, and never will, but that keeps the earth sweet; that saves on superfluities, and spends on essentials; that goes rusty, and educates the boy; that sells the horse, but builds the school; works early and late, takes two looms in the factory,

three looms, six looms, but pays off the mortgage on the paternal farm, and then goes back cheerfully to work again.

We can ill spare the commanding social benefits of cities; they must be used; yet cautiously, and haughtily,—and will yield their best values to him who best can do without them. Keep the town for occasions, but the habits should be formed to retirement. Solitude, the safeguard of mediocrity, is to genius the stern friend, the cold, obscure shelter where moult the wings which will bear it farther than suns and stars. He who should inspire and lead his race must be defended from traveling with the souls of other men, from living, breathing, reading, and writing in the daily, time-worn yoke of their opinions. "In the morning, solitude," said Pythagoras; that nature may speak to the imagination, as she does never in company, and that her favorite may make acquaintance with those divine strengths which disclose themselves to serious and abstracted thought. 'Tis very certain that Plato, Plotinus, Archimedes, Hermes, Newton, Milton, Wordsworth, did not live in a crowd, but descended into it from time to time as benefactors: and the wise instructor will press this point of securing to the young soul in the disposition of time and the arrangement of living, periods and habits of solitude. The high advantage of university-life is often the mere mechanical one, I may call it, of a separate chamber and fire,—which parents will allow the boy without hesitation at Cambridge, but do not think needful at home. We say solitude, to mark the character of the tone of thought; but if it can be shared between two or more than two, it is happier, and not less noble. "We four," wrote Neander to his sacred friends, "will enjoy at Halle the inward blessedness of a *civitas Dei*, whose foundations are forever friendship. The more I know of you, the more I dissatisfy and must dissatisfy all my wonted companions. Their very presence stupefies me. The common understanding withdraws itself from the one center of all existence."

Solitude takes off the pressure of present importunities that more catholic and humane relations may appear. The saint and poet seek privacy to ends the most public and universal: and it is the secret of culture to interest the man more in his public than in his private quality. Here is a new poem, which elicits a good many comments in the journals, and in conversation. From these it is easy, at last, to eliminate the verdict which readers passed upon it; and that is, in the main, unfavorable. The poet, as a craftsman, is only interested in the praise accorded to him, and not in the censure, though it be just. And the poor little poet hearkens only to that, and rejects the censure, as proving incapacity in the critic. But the poet cultivated becomes a stockholder in both companies,—say Mr. Curfew,—in the Curfew stock, and in the humanity stock; and, in the last, exults as much in the demonstration of the unsoundness of

Curfew, as his interest in the former gives him pleasure in the currency of Curfew. For, the depreciation of his Curfew stock only shows the immense values of the humanity stock. As soon as he sides with his critic against himself, with joy, he is a cultivated man.

We must have an intellectual quality in all property and in all action, or they are nought. I must have children, I must have events, I must have a social state, and history, or my thinking and speaking want body or basis. But to give these accessories any value, I must know them as contingent and rather showy possessions, which pass for more to the people than to me. We see this abstraction in scholars as a matter of course: but what a charm it adds when observed in practical men. Bonaparte, like Cæsar, was intellectual, and could look at every object for itself, without affection. Though an egotist à l'outrance, he could criticise a play, a building, a character, on universal grounds, and give a just opinion. A man known to us only as a celebrity in politics or in trade, gains largely in our esteem if we discover that he has some intellectual taste or skill; as when we learn of Lord Fairfax, the Long Parliament's general, his passion for antiquarian studies; or of the French regicide Carnot, his sublime genius in mathematics; or of a living banker, his success in poetry; or of a partisan journalist, his devotion to ornithology. So, if in travelling in the dreary wilderness of Arkansas or Texas, we should observe on the next seat a man reading Horace, or Martial, or Calderon, we should wish to hug him. In callings that require roughest energy, soldiers, sea-captains, and civil engineers sometimes betray a fine insight, if only through a certain gentleness when off duty: a good-natured admission that there are illusions, and who shall say that he is not their sport? We only vary the phrase, not the doctrine, when we say, that culture opens the sense of beauty. A man is a beggar who only lives to the useful, and, however he may serve as a pin or rivet in the social machine, cannot be said to have arrived at self-possession. I suffer, every day, from the want of perception of beauty in people. They do not know the charm with which all moments and objects can be embellished, the charm of manners, of self-command, of benevolence. Repose and cheerfulness are the badge of the gentleman,—repose in energy. The Greek battle-pieces are calm; the heroes, in whatever violent actions engaged, retain a serene aspect; as we say of Niagara, that it falls without speed. A cheerful, intelligent face is the end of culture, and success enough. For it indicates the purpose of nature and wisdom attained.

When our higher faculties are in activity, we are domesticated, and awkwardness and discomfort give place to natural and agreeable movements. It is noticed, that the consideration of the great periods

and spaces of astronomy induces a dignity of mind, and an indifference to death. The influence of fine scenery, the presence of mountains, appeases our irritations and elevates our friendships. Even a high dome, and the expansive exterior of a cathedral, have a sensible effect on manners. I have heard that stiff people lose something of their awkwardness under high ceilings, and in spacious halls. I think sculpture and painting have an effect to teach us manners and abolish hurry.

But, over all, culture must reinforce from higher influx the empirical skills of eloquence, or of politics, or of trade, and the useful arts. There is a certain loftiness of thought and power to marshal and adjust particulars, which can only come from an insight of their whole connection. The orator who has once seen things in their divine order, will never quite lose sight of this, and will come to affairs as from a higher ground, and, though he will say nothing of philosophy, he will have a certain mastery in dealing with them, and an incapableness if being dazzled or frightened, which will distinguish his handling from that of attorneys and factors. A man who stands on a good footing with the heads of parties at Washington, reads the rumors of the newspapers, and the guesses of provincial politicians with a key to the right and wrong in each statement, and sees well enough where all this will end. Archimedes will look through your Connecticut machine, at a glance, and judge of its fitness. And much more, a wise man who knows not only what Plato, but what Saint John, can show him, can easily raise the affair he deals with to a certain majesty. Plato says, Pericles owed this elevation to the lessons of Anaxagoras. Burke descended from a higher sphere when he would influence human affairs. Franklin, Adams, Jefferson, Washington, stood on a fine humanity, before which the brawls of modern senates are but pot-house politics.

But there are higher secrets of culture, which are not for the apprentice, but for proficients. These are lessons only for the brave. We must know our friends under ugly masks. The calamities are our friends. Ben Jonson specifies in his address to the Muse:

Get him the time's long grudge, the court's ill-will,
And, reconciled, keep him suspected still,
Make him lose all his friends, and, what is worse,
Almost all ways to my better course;
With me thou leav'st a better Muse than thee,
And which thou brought'st me, blessed Poverty."

We wish to learn philosophy by rote, and play at heroism. But the wiser God says, Take the shame, the poverty, and the penal solitude, that belong to truth-speaking. Try the rough water as well as the smooth. Rough water can teach lessons worth know-

ing. When the state is unquiet, personal qualities are more than ever decisive. Fear not a revolution which will constrain you to live five years in one. Don't be so tender at making an enemy now and then. Be willing to go to Coventry sometimes, and let the populace bestow on you their coldest contempts. The finished man of the world must eat of every apple once. He must hold his hatreds also at arm's length, and not remember spite. He has neither friends nor enemies, but values men only as channels of power.

Who who aims high, must dread an easy home and popular manners. Heaven sometimes hedges a rare character about with ungainliness and odium, as the burr that protects the fruit. If there is any great and good thing in store for you, it will not come at the first or the second call, nor in the shape of fashion, ease and city drawing-rooms. Popularity is for dolls. "Steep and craggy," said Porphyry, "is the path of the gods." Open your Marcus Antoninus. In the opinion of the ancients, he was the great man who scorned to shine, and who contested the frowns of fortune. They preferred the noble vessel too late for the tide, contending with winds and waves, dismantled and unrigged, to her companion borne into harbor with colors flying and guns firing. There is none of the social goods that may not be purchased too dear, and mere amiableness must not take rank with high aims and self-subsistency.

Bettine replies to Goethe's mother, who chides her disregard of dress,—*"If I cannot do as I have a mind, in our poor Frankfort, I shall not carry things far."* And the youth must rate at its true mark the inconceivable levity of local opinion. The longer we live, the most we must endure the elementary existence of men and women; and every brave heart must treat society as a child, and never allow it to dictate.

"All that class of the severe and restrictive virtues," said Burke, *"are almost too costly for humanity."* Who wishes to be severe? Who wishes to resist the eminent and polite, in behalf of the poor, and low, and impolite? and who that dares do it can keep his temper sweet, his frolic spirits? The high virtues are not debonair, but have their redress in being illustrious at last. What forests of laurel we bring, and the tears of mankind, to those who stood firm against the opinion of their contemporaries! The measure of a master is his success in bringing all men round to his opinion twenty years later.

Let me say here, that culture cannot begin too early. In talking with scholars, I observe that they lost on ruder companions those years of boyhood which alone could give imaginative literature a religious and infinite quality in their esteem. I find, too, that the chance for appreciation is much increased by being the son of an appreciator, and that these boys who now grow up are caught not only

years too late, but two or three births too late, to make the best scholars of. And I think it a presentable motive of a scholar that as, in an old community, a well-born proprietor is usually found, after the first heats of youth, to be a careful husband, and to feel a habitual desire that the estate shall suffer no harm by his administration, but shall be delivered down to the next heir in as good condition as he received it;—so, a considerate man will reckon himself a subject of that secular melioration by which mankind is mollified, cured, and refined, and will shun every expenditure of his forces on pleasure or gain, which will jeopardize this social and secular accumulation.

The fossil strata show us that nature began with rudimental forms, and rose to the more complex, as fast as the earth was fit for their dwelling-place; and that the lower perish, as the higher appear. Very few of our race can be said to be yet finished men. We still carry sticking to us some remains of the preceding inferior quadruped organization. We call these millions men; but they are not yet men. Half-engaged in the soil, pawing to get free, man needs all the music that can be brought to disengage him. If Love, red Love, with tears and joy; if Want with his scourge; if War with his cannonade; if Christianity with its charity; if Trade with its money; if Art with its portfolios; if Science with her telegraphs through the depths of space and time—can set his dull nerves throbbing, and, by loud taps on the tough chrysalis, can break its walls, and let the new creature emerge erect and free,—make way, and sing pæan! The age of the quadruped is to go out,—the age of the brain and of the heart is to come in. The time will come when the evil forms we have known can no more be organized. Man's culture can spare nothing, wants all the material. He is to convert all impediments into instruments, all enemies into power. The formidable mischief will only make the more useful slave. And if one shall read the future of the race hinted in the organic effort of nature to mount and meliorate, and the corresponding impulse to the better in the human being, we shall dare affirm that there is nothing he will not overcome and convert, until at last culture shall absorb the chaos and gehenna. He will convert the Furies into Muses, and the hells into benefit.

AN ESSAY ON LIBERTY

BY JOHN STUART MILL

(John Stuart Mill, English philosopher and political economist, was born in London, 1806. His father, James Mill, directed his education. In 1823, he was appointed to the clerkship in the India House and finally became the head of his department. Later the East India Company was abolished and in 1865, he was elected Member of Parliament for Westminster. After losing his seat in Parliament, he devoted the rest of his life until his death in 1873, to literary and philosophical pursuits. His "Utilitarianism" is one of his noted works.)

CHAPTER I

INTRODUCTORY

THE subject of this essay is not the so-called Liberty of the Will, so unfortunately opposed to the misnamed doctrine of Philosophical Necessity; but Civil, or Social Liberty: the nature and limits of the power which can be legitimately exercised by society over the individual. A question seldom stated, and hardly ever discussed, in general terms, but which profoundly influences the practical controversies of the age by its latent presence, and is likely soon to make itself recognized as the vital question of the future. It is so far from being new, that, in a certain sense, it has divided mankind, almost from the remotest ages; but in the stage of progress into which the more civilized portions of the species have now entered, it presents itself under new conditions, and requires a different and more fundamental treatment.

The struggle between Liberty and Authority is the most conspicuous feature in the portions of history with which we are earliest familiar, particularly in that of Greece, Rome, and England. But in old times this contest was between subjects, or some classes of subjects, and the Government. By liberty, was meant protection against the tyranny of the political rulers. The rulers were conceived (except in some of the popular governments of Greece) as in a necessarily antagonistic position to the people whom they ruled. They consisted of a governing One, or a governing tribe or caste, who derived their authority from inheritance or conquest, who, at all events, did not hold it at

the pleasure of the governed, and whose supremacy men did not venture, perhaps did not desire, to contest, whatever precautions might be taken against its oppressive exercise. Their power was regarded as necessary, but also as highly dangerous; as a weapon which they would attempt to use against their subjects, no less than against external enemies. To prevent the weaker members of the community from being preyed upon by innumerable vultures, it was needful that there should be an animal of prey stronger than the rest, commissioned to keep them down. But as the king of the vultures would be no less bent upon preying on the flock than any of the minor harpies, it was indispensable to be in a perpetual attitude of defense against his beak and claws. The aim, therefore, of patriots was to set limits to the power which the ruler should be suffered to exercise over the community; and this limitation was what they meant by liberty. It was attempted in two ways. First, by obtaining a recognition of certain immunities, called political liberties or rights, which it was to be regarded as a breach of duty in the ruler to infringe, and which if he did infringe, specific resistance, or general rebellion, was held to be justifiable. A second, and generally a later expedient, was the establishment of constitutional checks, by which the consent of the community, or of a body of some sort, supposed to represent its interests, was made a necessary condition to some of the more important acts of the governing power. To the first of these modes of limitation, the ruling power, in most European countries, was compelled, more or less, to submit. It was not so with the second; and, to attain this, or when already in some degree possessed, to attain it more completely, became everywhere the principal object of the lovers of liberty. And so long as mankind were content to combat one enemy by another, and to be ruled by a master, on condition of being guaranteed more or less efficaciously against his tyranny, they did not carry their aspirations beyond this point.

A time, however, came, in the progress of human affairs, when men ceased to think it a necessity of nature that their governors should be an independent power, opposed in interest to themselves. It appeared to them much better that the various magistrates of the State should be their tenants or delegates, revocable at their pleasure. In that way alone, it seemed, could they have complete security that the powers of government would never be abused to their disadvantage. By degrees their new demand for elective and temporary rulers became the prominent object of the exertions of the popular party, wherever any such party existed; and superseded, to a considerable extent, the previous efforts to limit the power of rulers. As the struggle proceeded for making the ruling power emanate from the periodical choice of the ruled, some persons began

to think that too much importance had been attached to the limitation of the power itself. That (it might seem) was a resource against rulers whose interests were habitually opposed to those of the people. What was now wanted was, that the rulers should be identified with the people; that their interest and will should be the interest and will of the nation. The nation did not need to be protected against its own will. There was no fear of its tyrannizing over itself. Let the rulers be effectually responsible to it, promptly removable by it, and it could afford to trust them with power of which it could itself dictate the use to be made. Their power was but the nation's own power, concentrated, and in a form convenient for exercise. This mode of thought, or rather perhaps of feeling, was common among the last generation of European liberalism, in the Continental section of which it still apparently predominates. Those who admit any limit to what a government may do, except in the case of such governments as they think ought not to exist, stand out as brilliant exceptions among the political thinkers of the Continent. A similar tone of sentiment might by this time have been prevalent in our own country, if the circumstances which for a time encouraged it, had continued unaltered.

But, in political and philosophical theories, as well as in persons, success discloses faults and infirmities which failure might have concealed from observation. The notion that the people have no need to limit their power over themselves, might seem axiomatic, when popular government was a thing only dreamed about, or read of as having existed at some distant period of the past. Neither was that notion necessarily disturbed by such temporary aberrations as those of the French Revolution, the worst of which were the work of a usurping few, and which, in any case, belonged, not to the permanent working of popular institutions, but to a sudden and conclusive outbreak against monarchical and aristocratic despotism. In time, however, a democratic republic came to occupy a large portion of the earth's surface, and made itself felt as one of the most powerful members of the community of nations; and elective and responsible government became subject to the observations and criticisms which wait upon a great existing fact. It was now perceived that such phrases as "self-government," and "the power of the people over themselves," do not express the true state of the case. The "people" who exercise the power are not always the same people with those over whom it is exercised; and the "self-government" spoken of is not the government of each by himself, but of each by all the rest. The will of the people, moreover, practically means the will of the most numerous or the most active part of the people; the majority, or those who succeed in making themselves accepted as the majority; the people, consequently may desire to oppress a part of their number; and precautions

are as much needed against this as against any other abuse of power. The limitation, therefore, of the power of government over individuals loses none of its importance when the holders of power are regularly accountable to the community, that is, to the strongest party therein. This view of things, recommending itself equally to the intelligence of thinkers and to the inclination of those important classes in European society to whose real or supposed interests democracy is adverse, has had no difficulty in establishing itself; and in political speculations "the tyranny of the majority" is now generally included among the evils against which society requires to be on its guard.

Like other tyrannies, the tyranny of the majority was at first and is still vulgarly, held in dread, chiefly as operating through the acts of the public authorities. But reflecting persons perceived that when society is itself the tyrant—society collectively over the separate individuals who compose it—its means of tyrannising are not restricted to the acts which it may do by the hands of its political functionaries. Society can and does execute its own mandates: and if it issues wrong mandates instead of right, or any mandates at all in things with which it ought not to meddle, it practises a social tyranny more formidable than many kinds of political oppression, since, though not usually upheld by such extreme penalties, it leaves fewer means of escape, penetrating much more deeply into the details of life, and enslaving the soul itself. Protection, therefore, against the tyranny of the magistrate is not enough: there needs protection also against the tyranny of the prevailing opinion and feeling; against the tendency of society to impose, by other means than civil penalties, its own ideas and practices as rules of conduct on those who dissent from them; to fetter the development, and, if possible, prevent the formation, of any individuality not in harmony with its ways, and compels all characters to fashion themselves upon the model of its own. There is a limit to the legitimate interference of collective opinion with individual independence: any to find that limit, and maintain it against encroachment, is as indispensable to a good condition of human affairs, as protection against political despotism.

But though this proposition is not likely to be contested in general terms, the practical question, where to place that limit—how to make the fitting adjustment between individual independence and social control—is a subject on which nearly everything remains to be done. All that makes existence valuable to any one, depends on the enforcement of restraints upon the actions of other people. Some rules of conduct, therefore, must be imposed, by law in the first place, and by opinion on many things which are not fit subjects for the operation of law. What these rules should be is the principal question in human affairs; but if we expect a few of the most obvious cases, it is one

of those which least progress has been made in resolving. No two ages, and scarcely any two countries, have decided it alike; and the decision of one age or country is a wonder to another. Yet the people of any given age and country no more suspect any difficulty in it, than if it were subject on which mankind had always been agreed. The rules which obtain among themselves appear to them self-evident and self-justifying. This all but universal illusion is one of the examples of the magical influence of custom, which is not only as the proverb says, a second time nature, but is continually mistaken for the first. The effect of custom in preventing and misgiving respecting the rules of conduct which mankind impose on one another, is all the more complete because the subject is one on which it is not generally considered necessary that reasons should be given, either by one person to others or by each to himself. People are accustomed to believe, and have been encouraged in the belief by some who aspire to the character of philosophers, that their feelings, on subjects of this nature, are better than reasons, and render reasons unnecessary. The practical principle which guides them to their opinions on the regulation of human conduct, is the feeling in each person's mind that everybody should be required to act as he, and those with whom he sympathises, would like them to act. No one, indeed, can acknowledge to himself that his standard of judgment is his own liking; but an opinion on a point of conduct, not supported by reasons, can only count as one person's preference; and if the reasons, when given, are a mere appeal to a similar preference felt by other people, it is still only many people's liking instead of one. To an ordinary man, however, his own preference, thus supported, is not only a perfectly satisfactory reason, but the only one he generally has for any of his notions of morality, taste, or propriety, which are not expressly written in his religious creed; and his chief guide in the interpretation even of that. Men's opinions, accordingly, on what is laudable or blamable, are affected by all the multifarious causes which influence their wishes in regard to the conduct of others, and which are as numerous as those which determine their wishes on any other subject. Sometimes their reason—at other times their prejudices or superstitions: often their social affections, not seldom their antisocial ones, their *envy* or *jealousy*, their *arrogance* of contemptuousness: but most commonly their desires or fears for themselves—their legitimate or illegitimate self-interest. Wherever there is an ascendant class, large portion of the morality of the country emanates from its class interests, and its feelings of class superiority. The morality between Spartans and Helots, between planters and negroes, between princes and subjects, between nobles and roturiers, between men and women, has been for the most part the creation of these class interests and feelings: and the sentiments thus generated react in turn

upon the moral feelings of the members of the ascendent class, in their relations among themselves. Where, on the other hand, a class formerly ascendant, has lost its ascendancy, or where its ascendancy is unpopular, the prevailing moral sentiments frequently bear the impress of an impatient dislike of superiority. Another grand determining principle of the rules of conduct, both in act and forbearance, which have been enforced by law or opinion, has been the servility of mankind towards the supposed preferences or aversions of their temporal masters or of their gods. This servility, though essentially selfish, is not hypocrisy; it gives rise to perfectly sentiments of abhorrence; it made men burn magicians and heretics. Among so many baser influences, the general and obvious interests of society have of course had a share, and a large one, in the direction of the moral sentiments: less, however, as a matter of reason, and on their own account, than as a consequence of the sympathies and antipathies which grew out of them: and sympathies and antipathies which had little or nothing to do with the interests of society, have made themselves felt in the establishment of moralities with quite as great force.

The likings and dislikings of society, or of some powerful portion of it, are thus the main thing which has practically determined the rules laid down for general observance, under the penalties of law or opinion. And in general, those who have been in advance of society in thought and feeling, have left this condition of things unassailed in principle, however they may have come into conflict with it in some of its details. They have occupied themselves rather in inquiring what things society ought to like or dislike, than in questioning whether its likings or dislikings should be a law to individuals. They preferred endeavouring to alter the feelings of mankind on the particular points on which they were themselves heretical, rather than make common cause in defence of freedom, with heretics generally. The only case in which the higher ground has been taken on principle and maintained with consistency, by any but an individual here and there, is that of religious belief: a case instructive in many ways, and not least so as forming a most striking instance of the fallibility of what is called the moral sense: for the *odium theologicum*, in a sincere bigot, is one of the most unequivocal cases of moral feeling. Those who first broke the yoke of what called itself the Universal Church, were in general as little willing to permit difference of religious opinion as that church itself. But when the heat of the conflict was over, without giving a complete victory to any party, and each church or sect was reduced to limit its hopes to retaining possession of the ground it already occupied; minorities, seeing that they had no chance of becoming majorities, were under the necessity of pleading to those whom they could not convert, for permission to

differ. It is accordingly on this battlefield, almost solely, that the rights of the individual against society have been asserted on broad grounds of principle, and the claim of society to exercise authority over dissentients openly controverted. The great writers to whom the world owes what religious liberty it possesses, have mostly asserted freedom of conscience as an indefeasible right, and denied absolutely that a human being is accountable to others for his religious belief. Yet so natural to mankind is intolerance in whatever they really care about, that religious freedom has hardly anywhere been practically realised, except where religious indifference, which dislikes to have its peace disturbed by theological quarrels, has added its weight to the scale. In the minds of almost all religious persons, even in the most tolerant countries, the duty of toleration is admitted with tacit reserves. One person will bear with dissent in matters of church government, but not of dogma; another can tolerate everybody, short of a Papist or a Unitarian; another every one who believes in revealed religion; a few extend their charity a little further, but stop at the belief in a God and in a future state. Wherever the sentiment of the majority is still genuine and intense, it is found to have abated little of its claim to be obeyed.

In England, from the peculiar circumstances of our political history, though the yoke of opinion is perhaps heavier, that of law is lighter, than in most other countries of Europe; and there is considerable jealousy of direct interference, by the legislative or the executive power, with private conduct; not so much from any just regard for the independence of the individual, as from the still subsisting habit of looking on the government as representing an opposite interest to the public. The majority have not yet learnt to feel the power of the government their power, or its opinions their opinions. When they do so, individual liberty will probably be as much exposed to invasion from the government, as it already is from public opinion. But, as yet, there is a considerable amount of feeling ready to be called forth against any attempt of the law to control individuals in things in which they have not hitherto been accustomed to be controlled by it; and this with very little discrimination as to whether the matter is, or is not, within the legitimate sphere of legal control; inso-much that the feeling, highly salutary on the whole, is perhaps quite as often misplaced as well grounded in the particular instances of its application. There is, in fact, no recognised principle by which the propriety or impropriety of government interference is customarily tested. People decide according to their personal preferences. Some, whenever they see any good to be done, or evil to be remedied, would willingly instigate the government to undertake the business; while others prefer to bear almost any moment of social evil, rather than add one to the department of human interests amenable to govern-

mental control. And men range themselves on one or the other side in any particular case, according to this general direction of their sentiments; or according to the degree of interest which they feel in the particular thing which it is proposed that the government should do, or according to the belief they entertain that the government would, or would not, do it in the manner they prefer; but very rarely on account of any opinion to which they consistently adhere, as to what things are fit to be done by a government. And it seems to me that in consequence of this absence of rule or principle, one side is at present as often wrong as the other; the interference of government is, with about equal frequency, improperly invoked and improperly condemned.

The object of this Essay is to assert one very simple principle, as entitled to govern absolutely the dealings of society with the individual in the way of compulsion and control, whether the means used be physical force in the form of legal penalties, or the moral coercion of public opinion. That principle is, that the sole end for which mankind are warranted, individually or collectively, in interfering with the liberty of action of any of their number, is self-protection. That the only purpose for which power can be rightfully exercised over any member of a civilised community, against his will, is to prevent harm to others. His own good, either physical or moral, is not a sufficient warrant. He cannot rightfully be compelled to do or forbear because it will be better for him to do so, because it will make him happier, because, in the opinions of others, to do so would be wise, or even right. These are good reasons for remonstrating with him, or reasoning with him, or persuading him, or entreating him, but not for compelling him, or visiting him with any evil in case he do otherwise. To justify that, the conduct from which it is desired to deter him must be calculated to produce evil to some one else. The only part of the conduct of any one, for which he is amenable to society, is that which concerns others. In the part which merely concerns himself, his independence is, of right, absolute. Over himself, over his own body and mind, the individual is sovereign.

It is, perhaps, hardly necessary to say that this doctrine is meant to apply only to human beings in the maturity of their faculties. We are not speaking of children, or of young persons below the age which the law may fix as that of manhood or womanhood. Those who are still in a state to require being taken care of by others, must be protected against their own actions as well as against external injury. For the same reason, we may leave out of consideration those backward states of society in which the race itself may be considered as in its nonage. The early difficulties in the way of spontaneous progress are so great, that there is seldom any choice of means for overcoming them; and a ruler full of the spirit of improvement is war-

ranted in the use of any expedients that will attain an end, perhaps otherwise unattainable. Despotism is a legitimate mode of government in dealing with barbarians, provided the end be the improvement, and the means justified by actually effecting that end. Liberty, as a principle, has no application to any state of things anterior to the time when mankind have become capable of being improved by free and equal discussion. Until then, there is nothing for them but implicit obedience to an Akbar or a Charlemagne, if they are so fortunate as to find one. But as soon as mankind have attained the capacity of being guided to their own improvement by conviction or persuasion (a period long since reached in all nations with whom we need here concern ourselves), compulsion, either in the direct form or in that of pains and penalties for non-compliance, is no longer admissible as a means to their own good, and justifiable only for the security of others.

It is proper to state that I forego any advantage which could be derived to my argument from the idea of abstract right, as a thing independent of utility. I regard utility as the ultimate appeal on all ethical questions; but it must be utility in the largest sense, grounded on the permanent interests of a man as a progressive being. Those interests, I contend, authorise the subjection of individual spontaneity to external control, only in respect to those actions of each, which concern the interest of other people. If any one does an act hurtful to others, there is a *prima facie* case for punishing him, by law, or, where legal penalties are not safely applicable, by general disapprobation. There are also many positive acts for the benefit of others, which he may rightfully be compelled to perform; such as to give evidence in a court of justice; to bear his fair share in the common defence, or in any other point work necessary to the interest of the society of which he enjoys the protection; and to perform certain acts of individual beneficence, such as saving a fellow-creature's life, or interposing to protect the defenseless against ill-usage, things which whenever it is obviously a man's duty to do, he may rightfully be made responsible to society for not doing. A person may cause evil to others not only by his actions but by his inaction, and in either case he is justly accountable to them for the injury. The latter case, it is true, requires a much more cautious exercise of compulsion than the former. To make any one answerable for doing evil to others is the rule; to make him answerable for not preventing evil is, comparatively speaking, the exception. Yet there are many cases clear enough and grave enough to justify that exception. In all things which regard the external relations of the individual, he is *de jure* amenable to those whose interests are conceived, and, if need be, to society as their protector. There are often good reasons for not holding him to the responsibility; but these reasons must arise from the special expedi-

ences of the case: either because it is a kind of case in which he is on the whole likely to act better, when left to his own discretion, than when controlled in any way in which society have it in their power to control him; or because the attempt to exercise control would produce other evils, greater than those which it would prevent. When such reasons as these preclude the enforcement of responsibility, the conscience of the agent himself should step into the vacant judgment seat, and protect those interests of others which have no external protection; pledging himself all the more rigidly, because the case does not admit of his being made accountable to the judgment of his fellow-creatures.

But there is a sphere of action in which society, as distinguished from the individual, has, if any, only an indirect interest; comprehending all that portion of a person's life and conduct which affects only himself, or if it also affects others, only with their free, voluntary, and undeceived consent and participation. When I say only himself, I mean directly, and in the first instance; for whatever affects himself, may affect others through himself; and the objection which may be grounded on this contingency, will receive consideration in the sequel. This, then, is the appropriate region of human liberty. It comprises, first, the inward domain of consciousness; demanding liberty of conscience in the most comprehensive sense; liberty of thought and feel; absolute freedom of opinion and sentiment on all subjects, practical or speculative, scientific, moral, or theological. The liberty of expressing and publishing opinions may seem to fall under a different principle, since it belongs to that part of the conduct of an individual which concerns other people; but, being almost of as much importance as the liberty of thought itself, and resting in great part on the same reasons, is practically inseparable from it. Secondly, the principle requires liberty of tastes and pursuits; of framing the plan of our life to suit our own character; of doing as we like, subject to such consequences as may follow: without impediment from our fellow-creatures, so long as what we do does not harm them, even though they should think our conduct foolish, perverse, or wrong. Thirdly, from this liberty of each individual, follow the liberty, within the same limits, of combination among individuals; freedom to unite, for any purpose not involving harm to others: the persons combining being supposed to be of full age, and not forced or deceived.

No society in which these liberties are not, on the whole, respected, is free, whatever may be its form of government; and none is completely free in which they do not exist absolute and unqualified. The only freedom which deserves the name, is that of pursuing our own good in our own way, so long as we do not attempt to deprive others of theirs, or impede their efforts to obtain it. Each is the proper

guardian of his own health, whether bodily, or mental and spiritual. Mankind are greater gainers by suffering each other to live as seems good to themselves, than by compelling each to live as seems good to the rest.

Though this doctrine is anything but new, and, to some persons, may have the air of a truism, there is no doctrine which stands more directly opposed to the general tendency of existing opinion and practice. Society has expended fully as much effort in the attempt (according to its lights) to compel people to conform to its notions of personal as of social excellence. The ancient commonwealths thought themselves entitled to practise, and the ancient philosophers countenanced, the regulation of every part of private conduct by public authority, on the ground that the State had a deep interest in the whole bodily and mental discipline of every one of its citizens; a mode of thinking which may have been admissable in small republics surrounded by powerful enemies, in constant peril of being subverted by foreign attack or internal commotion, and to which even a short interval of relaxed energy and self-command might so easily be fatal that they could not afford to wait for the salutary permanent effects of freedom. In the modern world, the greater size of political communities, and, above all, the separation between spiritual and temporal authority (which placed the direction of men's consciences in other hands than those which controlled their worldly affairs), prevented so great an interference by law in the details of private life; but the engines of moral repression have been wielded more strenuously against divergence from the reigning opinion in self-regarding, than even in social matters; religion, the most powerful of the elements which have entered into the formation of moral feeling, having almost always been governed either by the ambition of a hierarchy, seeking control over every department of human conduct, or by the spirit of Puritanism. And some of those modern reformers who have placed themselves in strongest opposition to the religions of the past, have been noway behind either churches or sects in their assertion of the right of spiritual domination: M. Comte, in particular, whose social system, as unfolded in his *Système de Politique Positive*, aims at establishing (though by moral more than by legal appliances) a despotism of society over the individual, surpassing anything contemplated in the political ideal of the most rigid disciplinarian among the ancient philosophers.

Apart from the peculiar tenets of individual thinkers, there is also in the world at large an increasing inclination to stretch unduly the powers of society over the individual, both by the force of opinion and even by that of legislation; and as the tendency of all the changes taking place in the world is to strengthen society, and diminish the power of the individual, this encroachment is not one of the

evils which tend spontaneously to disappear, but, on the contrary, to grow more and more formidable. The disposition of mankind, whether as rulers or as fellow-citizens, to impose their own opinions and inclinations as a rule of conduct on others, is so energetically supported by some of the best and by some of the worst feelings incident to human nature, that it is hardly ever kept under restraint by anything but want of power; and as the power is not declining, but growing, unless a strong barrier of moral conviction can be raised against the mischief, we must expect, in the present circumstances of the world, to see it increase.

It will be convenient for the argument, if, instead of at once entering upon the general thesis, we confine ourselves in the first instance to a single branch of it, on which the principle here stated is if not fully, yet to a certain point, recognised by the current opinions. This one branch is the Liberty of Thought: from which it is impossible to separate the cognate liberty of speaking and of writing. Although these liberties, to some considerable amount, form part of the political morality of all countries which profess religious toleration and free institutions, the grounds, both philosophical and practical, on which they rest, are perhaps not so familiar to the general mind, nor so thoroughly appreciated by many even of the leaders of opinion, as might have been expected. Those grounds, when rightly understood, are of much wider application than to only one division of the subject, and a thorough consideration of this part of the question will be found the best introduction to the remainder. Those to whom nothing which I am about to say will be new, may therefore, I hope, excuse me, if on a subject which for now three centuries has been so often discussed, I venture on one discussion more.

CHAPTER II

OF THE LIBERTY OF THOUGHT AND DISCUSSION

THE time, it is to be hoped, is gone by, when any defence would be necessary of the "liberty of the press" as one of the securities against corrupt or tyrannical government. No argument, we may suppose, can now be needed, against permitting a legislature or an executive, not identified in interest with the people, to prescribe opinions to them, and determine what doctrines or what arguments they shall be allowed to hear. This aspect of the question, besides, has been so often and so triumphantly enforced by preceding writers, that it needs not be specially insisted on in this place. Though the law of England, on the subject of the press, is as servile to this day as it was in the time of the Tudors, there is little danger of its being actually put in force against political discussion, except during some temporary panic, when fear of insurrection drives ministers and

*These words had scarcely been written, when, as if to give them an emphatic contradiction, occurred the Government Press Prosecutions of 1858. That ill-judged interference with the liberty of public discussion has not, however, induced me to alter a single word in the text, nor has it at all weakened my conviction that, moments of panic excepted, the era of pains and penalties for political discussion has, in our own country, passed away. For, in the first place, the prosecutions were not persisted in; and, in the second, they were never, properly speaking, political prosecutions. The offence charged was not that of criticising institutions, or the acts or persons of rulers, but of circulating what was deemed an immoral doctrine, the lawfulness of Tryannicide.

If the arguments of the present chapter are of any validity, there ought to exist the fullest liberty of professing and discussing, as a matter of ethical conviction, any doctrine, however immoral it may be considered. It would therefore, be irrelevant and out of place to examine here, whether the doctrine of Tryannicide deserves that title. I shall content myself with saying that the subject has been at all times one of the open questions of morals; that the act of a private citizen in striking down a criminal, who, by raising himself above the law, has placed himself beyond the reach of legal punishment or control, has been accounted by whole nations, and by some of the best and wisest of men, not a crime, but an act of exalted virtue; and that, right or wrong, it is not of the nature of assassination, but of civil war. As such, I hold that the instigation to it, in a specific case, may be a proper subject of punishment, but only if an overt act has followed, and at least a probable connection can be established between the act and the instigation. Even then, it is not a foreign government, but the very government assailed, which alone, in the exercise of self-defence, can legitimately punish attacks directed against its own existence.

judges from their property;* and, speaking generally, it is not, in constitutional countries, to be apprehended, that the government, whether completely responsible to the people or not, will often attempt to control the expression of opinion, except when in doing so it makes itself the organ of the general intolerance of the public. Let us suppose, therefore, that the government is entirely at one with the people, and never thinks of exerting any power of coercion unless in agreement with what it conceives to be their voice. But I deny the right of the people to exercise such coercion, either by themselves or by their government. The power itself is illegitimate. The best government has no more title to it than the worst. It is as noxious, or more noxious, when exerted in accordance with public opinion, than when in opposition to it. If all mankind minus one were of one opinion, and only one person were of the contrary opinion, mankind would be no more justified in silencing that one person, than he, if he had the power, would be justified in silencing mankind. Were an opinion a personal possession of no value except to the owner; if to be obstructed in the enjoyment of it were simply a private injury, it would make some difference whether the injury was inflicted only on a few persons or on many. But the peculiar evil of silencing the expression of an opinion is, that it is robbing the human race; posterity as well as the existing generation; those who dissent from the opinion, still more than those who hold it. If the opinion is right, they are deprived of the opportunity of exchanging error for truth: if wrong, they lose, what is almost as great a benefit, the clearer perception and livelier impression of truth, produced by its collision with error.

It is necessary to consider separately these two hypotheses, each of which has a distinct branch of the argument corresponding to it. We can never be sure that the opinion we are endeavouring to stifle is a false opinion; and if we were sure, stifling it would be an evil still.

First: The opinion which it is attempted to suppress by authority may possibly be true. Those who desire to suppress it, of course deny its truth; but they are not infallible. They have no authority to decide the question for all mankind, and exclude every other person from the means of judging. To refuse a hearing to an opinion, because they are sure that it is false, is to assume that their certainty is the same thing as absolute certainty. All silencing of discussion is an assumption of infallibility. Its condemnation may be allowed to rest on this common argument, not the worse for being common.

Unfortunately for the good sense of mankind, the fact of their fallibility is far from carrying the weight in their practical judgment which is always allowed to it in theory; for while every one

well knows himself to be fallible, few think it necessary to take any precautions against their own fallibility, or admit the supposition that any opinion, of which they feel very certain, may be one of the examples of the error to which they acknowledge themselves to be liable. Absolute princes, or others who are accustomed to unlimited deference, usually feel this complete confidence in their own opinions on nearly all subjects. People more happily situated, who sometimes hear their opinions disputed, and are not wholly unused to be set right when they are wrong, place the same unbounded reliance only on such of their opinions as are shared by all who surround them, or to whom they habitually refer; for in proportion to a man's want of confidence in his own solitary judgment, does he usually repose, with implicit trust, on the infallibility of "the world" in general. And the world, to each individual, means the part of it with which he comes in contact; his party, his sect, his church, his class of society; the man may be called, by comparison, almost liberal and large-minded to whom it means anything so comprehensive as his own country or his own age. Nor is his faith in this collective authority at all shaken by his being aware that other ages, countries, sects, churches, classes, and parties have thought, and even now think, the exact reverse. He devolves upon his own world the responsibility of being in the right against the dissentient worlds of other people; and it never troubles him that mere accident has decided which of these numerous worlds is the object of his reliance, and that the same causes which make him a Churchman in London, would have made him a Buddhist or a Confucian in Pekin. Yet it is as evident in itself, as any amount of argument can make it, that ages are no more infallible than individuals; every age having held many opinions which subsequent ages have deemed not only false but absurd; and it is as certain that many opinions new general will be rejected by future ages, as it is that many, once general, are rejected by the present.

The objection likely to be made to this argument would probably take some such form as the following. There is no greater assumption of infallibility in forbidding the propagation of error, than in any other thing which is done by public authority on its own judgment and responsibility. Judgment is given to men that they may use it. Because it may be used erroneously, are men to be told that they ought not to use it at all? To prohibit what they think pernicious, is not claiming exemption from error, but fulfilling the duty incumbent on them, although fallible, of acting on their conscientious conviction. If we were never to act on our opinions, because those opinions may be wrong, we should leave all our interests uncared for, and all our duties unperformed. An objection which applies to all conduct can be no valid objection to any conduct in particular. It is the

duty of governments, and of individuals, to form the truest opinions they can; to form them carefully, and never impose them upon others unless they are quite sure of being right. But when they are sure (such reasoners may say), it is not conscientiousness but cowardice to shrink from acting on their opinions, and allow doctrines which they honestly think dangerous to the welfare of mankind, either in this life or in another, to be scattered abroad without restraint, because other people, in less enlightened times, have persecuted opinions now believed to be true. Let us take care, it may be said, not to make the same mistakes: but governments and nations have made mistakes in other things, which are not denied to be fit subjects for the exercise of authority: they have laid on bad taxes, made unjust wars. Ought we therefore to lay on no taxes, and, under whatever provocation, make no wars? Men, and governments, must act to the best of their ability. There is no such thing as absolute certainty, but there is assurance sufficient for the purposes of human life. We may, and must, assume our opinion to be true for the guidance of our own conduct: and it is assuming no more when we forbid bad men to pervert society by the propagation of opinions which we regard as false and pernicious.

I answer, that it assuming very much more. There is the greatest difference between presuming an opinion to be true, because, with every opportunity for contesting it, it has not been refuted, and assuming its truth for the purpose of not permitting its refutation. Complete liberty of contradicting and disproving our opinion is the very condition which justifies us in assuming its truth for purposes of action; and on no other terms can a being with human faculties have any rational assurance of being right.

When we consider either the history of opinion, or the ordinary conduct of human life, to what is it to be ascribed that the one and the other are no worse than they are? Not certainly to the inherent force of the human understanding; for, on any matter not self-evident, there are ninety-nine persons totally incapable of judging of it for one who is capable; and the capacity of the hundredth person is only comparative; for the majority of the eminent men of every past generation held many opinions now known to be erroneous, and did or approved numerous things which no one will now justify. Why is it, then, that there is on the whole a preponderance among mankind of rational opinions and rational conduct? If there really is this preponderance—which there must be unless human affairs are, and have always been, in an almost desperate state—it is owing to a quality of the human mind, the source of everything respectable in man either as an intellectual or as a moral being, namely, that his errors are corrigible. He is capable of rectifying his mistakes, by discussion and experience. Not by experience alone. There must be

discussion, to show how experience is to be interpreted. Wrong opinions and practices gradually yield to fact and argument; but facts and arguments, to produce any effect on the mind, must be thought before it. Very few facts are able to tell their own story, without comments to bring out their meaning. The whole strength and value, then, of human judgment, depending on the one property, that it can be set right when it is wrong, reliance can be placed on it only when the means of setting it right are kept constantly at hand. In the case of any person whose judgment is really deserving of confidence, how has it become so? Because he has kept his mind open to criticism of his opinions and conduct. Because it has been his practice to listen to all that could be said against him; to profit by as much of it as was just, and expound to himself, and upon occasion to others, the fallacy of what was fallacious. Because he has felt, that the only way in which a human being can make some approach to knowing the whole of a subject, is by hearing what can be said about it by persons of every variety of opinion, and studying all modes in which it can be looked at by every character of mind. No wise man ever acquired his wisdom in any mode but this; nor is it in the nature of human intellect to become wise in any other manner. The steady habit of correcting and completing his own opinion by collating it with those of others, so far from causing doubt and hesitation in carrying it into practice, is the only stable foundation for a just reliance on it: for, being cognisant of all that can, at least obviously, be said against him, and having taken up his position against all gainsayers—knowing that he has sought for objections and difficulties, instead of avoiding them, and has shut out no light which can be thrown upon the subject from any quarter—he has a right to think his judgment better than that of any person, or any multitude, who have not gone through a similar process.

It is not too much to require that what the wisest of mankind, those who are best entitled to trust their own judgment, find necessary to warrant their relying on it, should be submitted to by that miscellaneous collection of a few wise and many foolish individuals, called the public. The most intolerant of churches, the Roman Catholic Church, even at the canonization of a saint, admits, and listens patiently to, a "devil's advocate." The holiest of men, it appears, cannot be admitted to posthumous honours, until all that the devil could say against him is known and weighed. If even the Newtonian philosophy were not permitted to be questioned, mankind could not feel as complete assurance of its truth as they now do. The beliefs which we have most warrant for have no safeguard to rest on, but a standing invitation to the whole world to prove them unfounded. If the challenge is not accepted, or is accepted and the attempt fails, we are far enough from certainly still; but we have done the best

that the existing state of human reason admits of; we have neglected nothing that could give the truth a chance of reaching us: if the lists are kept open, we may hope that if there be a better truth, it will be found when the human mind is capable of receiving it; and in the meantime we may rely on having attained such approach to truth as is possible in our own day. This is the amount of certainty attainable by a fallible being, and this the sole way of attaining it.

Strange it is, that men should admit the validity of the arguments for free discussion, but object to their being "pushed to an extreme;" not seeing that unless the reasons are good for an extreme case, they are not good for any case. Strange that they should imagine that they are not assuming infallibility, when they acknowledge that there should be free discussion on all subjects which can possibly be doubtful, but think that some particular principle or doctrine should be forbidden to be questioned because it is so certain, that is, because they are certain that it is certain. To call any proposition certain, while there is any one who would deny its certainty if permitted, but who is not permitted, is to assume that we ourselves, and those who agree with us, are the judges of certainty, and judges without hearing the other side.

In the present age—which has been described as "*destitute of faith, but terrified at scepticism*"—in which people feel sure, not so much that their opinions are true, as that they should not know what to do without them—the claims of an opinion to be protected from public attack are rested not so much on its truth, as on its importance to society. These are, it is alleged, certain beliefs so useful, not to say indispensable, to well-being that it is as much the duty of governments to uphold those beliefs, as to protect any other of the interests of society. In a case of such necessity, and so directly in the line of their duty, something less than infallibility may, it is maintained, warrant, and even bind, governments to act on their own opinion, confirmed by the general opinion of mankind. It is also often argued, and still oftener thought, that none but bad men would desire to weaken these salutary beliefs; and there can be nothing wrong, it is thought, in restraining bad men, and prohibiting what only such men would wish to practise. This mode of thinking makes the justification of restraints on discussion not a question of the truth of doctrines, but of their usefulness; and flatters itself by that means to escape the responsibility of claiming to be an infallible judge of opinions. But those who thus satisfy themselves, do not perceive that the assumption of infallibility is merely shifted from one point to another. The usefulness of an opinion is itself matter of opinion: as disputable, as open to discussion, and requiring discussion as much as the opinion itself. There is the same need of an infallible judge of opinions to decide an opinion to be noxious, as to decide it to be false, unless the opinion condemned has full opportunity of defending itself. And it

will not do to say that the heretic may be allowed to maintain the utility or harmlessness of his opinion, though forbidden to maintain its truth. The truth of an opinion is part of its utility. If we would know whether or not it is desirable that a proposition should be believed, is it possible to exclude the consideration of whether or not it is true? In the opinion, not of bad men, but of the best men, no belief which is contrary to truth can be really useful: and can you prevent such men from urging that plea, when they are charged with culpability for denying some doctrine which they are told is useful, but which they believe to be false? Those who are on the side of received opinions never fail to take all possible advantage of this plea; you do not find them handling the question of utility as if it could be completely abstracted from that of truth: on the contrary, it is, above all, because their doctrine is "the truth," that the knowledge or the belief of it is held to be so indispensable. There can be no fair discussion of the question of usefulness when an argument so vital may be employed on one side, but not on the other. And in point of fact, when law or public feeling do not permit the truth of an opinion to be disputed, they are just as little tolerant of a denial of its usefulness. The utmost they allow is an extenuation of its absolute necessity, or of the positive guilt of rejecting it.

In order more fully to illustrate the mischief of denying a hearing to opinions because we, in our own judgment, have condemned them, it will be desirable to fix down the discussion to a concrete case; and I choose, by preference, the cases which are least favourable to me—in which the argument against freedom of opinion, both on the score of truth and on that of utility, is considered the strongest. Let the opinions impugned be the belief in a God and in a future state, or any of the commonly received doctrines of morality. To fight the battle on such ground gives a great advantage to an unfair antagonist; since he will be sure to say (and many who have no desire to be unfair will say it internally), are these the doctrines which you do not deem sufficiently certain to be taken under the protection of law? Is the belief in a God one of the opinions to feel sure of which you hold to be assuming infallibility? But I must be permitted to observe, that it is not the feeling sure of a doctrine (be it what it may) which I call an assumption of infallibility. It is the undertaking to decide that question for others, without allowing them to hear what can be said on the contrary side. And I denounce and reprobate this pretension not the less, if put forth on the side of my most solemn convictions. However positive any one's persuasion may be, not only of the falsity but of the pernicious consequences—not only of the pernicious consequences, but (to adopt expressions which I altogether condemn) the immorality and impiety of an opinion; yet if, in pursuance of that private judgment, though backed by the public judgment of his

country or his contemporaries, he prevents the opinion from being heard in its defence, he assumes infallibility. And so far from the assumption being less objectionable or less dangerous because the opinion is called immoral or impious, this is the case of all others in which it is most fatal. These are exactly the occasions on which the men of one generation commit those dreadful mistakes which excite the astonishment and horror of posterity. It is among such that we find the instances memorable in history, when the arm of the law has been employed to root out the best men and the noblest doctrines; with deplorable success as to the men, though some of the doctrines have survived to be (as if in mockery) invoked in defence of similar conduct towards those who dissent from them, or from their received interpretation.

Mankind can hardly be too often remindful, that there was once a man named Socrates, between whom and the legal authorities and public opinion of his time there took place a memorable collision. Born in an age and country abounding in individual greatness, this man has been handed down to us by those who best knew both him and the age, as the most virtuous man in it; while we know him as the head and prototype of all subsequent teachers of virtue, the source equally of the lofty inspiration of Plato and the judicious utilitarianism of Aristotle, "*i maestri di color che sanno*," the two headsprings of ethical as of all other philosophy. This acknowledged master of all the eminent thinkers who have since lived—whose fame, still growing after more than two thousand years, all but outweighs the whole remainder of the names which make his native city illustrious—was put to death by his countrymen, after a judicial conviction, for impiety and immorality. Impiety, in denying the gods recognized by the State; indeed his accuser asserted (see the "Apologia") that he believed in no gods at all. Immorality, in being, by his doctrines and instructions, a "corruptor of youth." Of these charges the tribunal, there is every ground for believing, honestly found him guilty, and condemned the man who probably of all then born had deserved least of mankind to be put to death as a criminal.

To pass from this to the only other instance of judicial iniquity, the mention of which, after the condemnation of Socrates, would not be an anti-climax: the event which took place on Calvary rather more than eighteen hundred years ago. The man who left on the memory of those who witnessed his life and conversation such an impression of his moral grandeur that eighteen subsequent centuries have done homages to him as the Almighty in person, was ignominiously put to death, as what? As a blasphemer. Men did not merely mistake their benefactor; they mistook him for the exact contrary of what he was, and treated him as that prodigy of im-

piety which they themselves are now held to be for their treatment of him. The feelings with which mankind now regard these lamentable transactions, especially the later of the two, render them extremely unjust in their judgment of the unhappy actors. These were, to all appearance, not bad men—not worse than men commonly are, but rather the contrary; men who possessed in a full, or somewhat more than a full measure, the religious, moral, and patriotic feelings of their time and people: the very kind of men who, in all times, our own included, have every chance of passing through life blameless and respected. The high-priest who rent his garments when the words were pronounced, which, according to all the ideas of his country, constituted the blackest guilt, was in all probability quite as sincere in his horror and indignation as the generality of respectable and pious men now are in the religious and moral sentiments they profess; and most of those who now shudder at his conduct, if they had lived in his time, and been born Jews, would have acted precisely as he did. Orthodox Christians who are tempted to think that those who stoned to death the first martyrs must have been worse men than they themselves are, ought to remember that one of those persecutors was Saint Paul.

Let us add one more example, the most striking of all, if the impressiveness of an error is measured by the wisdom and virtue of him who falls into it. If ever any one, possessed of power, had grounds for thinking himself the best and most enlightened among his contemporaries, it was the Emperor Marcus Aurelius. Absolute monarch of the whole civilized world, he preserved through life not only the most unblemished justice, but what was less to be expected from his Stoical breeding, the tenderest heart. The few failings which are attributed to him were all on the side of indulgence: while his writings, the highest ethical product of the ancient mind, differ scarcely perceptibly, if they differ at all, from the most characteristic teachings of Christ. This man, a better Christian in all but the dogmatic sense of the word than almost any of the ostensibly Christian sovereigns who have since reigned, persecuted Christianity. Placed at the summit of all the previous attainments of humanity, with an open, unfettered intellect, and a character which led him of himself to embody in his moral writings the Christian ideal, he yet failed to see that Christianity was to be a good and not an evil to the world, with his duties to which he was so deeply penetrated. Existing society he knew to be in a deplorable state. But such as it was, he saw, or thought he saw, that it was held together, and prevented from being worse, by belief and reverence of the received divinities. As a ruler of mankind, he deemed it his duty not to suffer society to fall in pieces; and saw not how, if its existing ties were removed, any others could be formed which could

again knit it together. The new religion openly aimed at dissolving these ties: unless, therefore, it was his duty to adopt that religion, it seemed to be his duty to put it down. Inasmuch then as the theology of Christianity did not appear to him true or of divine origin; inasmuch as this strange history of a crucified God was not credible to him, and a system which purported to rest entirely upon a foundation to him so wholly unbelievable, could not be foreseen by him to be that renovating agency which, after all abatements, it has in fact proved to be; the gentlest and most amiable of philosophers and rulers, under a solemn sense of duty, authorized the persecution of Christianity. To my mind this is one of the most tragical facts in all history. It is a bitter thought, how different a thing the Christianity of the world might have been, if the Christian faith had been adopted as the religion of the empire under the auspices of Marcus Aurelius instead of those of Constantine. But it would be equally unjust to him and false to truth to deny, that no one plea which can be urged for punishing anti-Christian teaching was wanting to Marcus Aurelius for punishing, as he did, the propagation of Christianity. No Christian more firmly believes that Atheism is false, and tends to the dissolution of society, than Marcus Aurelius believed the same things of Christianity; he who, of all men then living, might have been thought the most capable of appreciating it. Unless any one who approves of punishment for the promulgation of opinions, flatters himself that he is a wiser and better man than Marcus Aurelius—more deeply versed in the wisdom of his time, more elevated in his intellect above it—more earnest in his search for truth, or more single-minded in his devotion to it when found; let him abstain from that assumption of the joint infallibility of himself and the multitude, which the great Antoninus made with so unfortunate a result.

Aware of the impossibility of defending the use of punishment for restraining irreligious opinions by any argument which will not justify Marcus Antoninus, the enemies of religious freedom, when hard pressed, occasionally accept this consequence, and say, with Dr. Johnson that the persecutors of Christianity were in the right; that persecution is an ordeal through which truth ought to pass and always passes successfully legal penalties being in the end, powerless against truth though sometimes beneficially effective against mischievous errors. This is a form of the argument for religious intolerance sufficiently remarkable not to be passed without notice.

A theory which maintains that truth may justifiably be persecuted because persecution cannot possibly do it any harm, cannot be charged with being intentionally hostile to the reception of new truths; but we cannot commend the generosity of its dealing with the persons to whom mankind are indebted for them. To discover

to the world something which deeply concerns it, and of which it was previously ignorant; to prove to it that it had been mistaken on some vital point of temporal or spiritual interest, is as important a service as a human being can render to his fellow-creatures, and in certain cases, as in those of the early Christians and of the Reformers, those who think with Dr. Johnson believe it to have been the most precious gift which could be bestowed on mankind. That the authors of such splendid benefits should be requited by martyrdom; that their reward should be to be dealt with as the vilest of criminals, is not, upon this theory, a deplorable error and misfortune, for which humanity should mourn in sackcloth and ashes, but the normal and justifiable state of things. The propounder of a new truth, according to this doctrine, should stand, as stood, in the legislation of the Locrians, the proposer of a new law, with a halter round his neck, to be instantly tightened if the public assembly did not, on hearing his reasons, then and there adopt his proposition. People who defend this mode of treating benefactors cannot be supposed to set much value on the benefit; and I believe this view of the subject is mostly confined to the sort of persons who think that truths may have been desirable once, but that we have had enough of them now.

But, indeed, the dictum that truth always triumphs over persecution is one of those pleasant falsehoods which men repeat after one another till they pass into commonplaces, but which all experience refutes. History teems with instances of truth put down by persecution. If not suppressed forever, it may be thrown back for centuries. To speak only of religious opinions: the Reformation broke out at least twenty times before Luther, and was put down. Arnold of Brescia was put down. Fra Dolcino was put down. Savonarola was put down. The Albigeois were put down. The Vaudois were put down. The Lollards were put down. The Husites were put down. Even after the era of Luther, wherever persecution was persisted in, it was successful. In Spain, Italy, Flanders, the Austrian empire, Protestantism was rooted out; and, most likely, would have been so in England, had Queen Mary lived, or Queen Elizabeth died. Persecution has always succeeded, save where the heretics were too strong a party to be effectually persecuted. No reasonable person can doubt that Christianity might have been extirpated in the Roman Empire. It spread, and became predominant, because the persecutions were only occasional, lasting but a short time, and separated by long intervals of almost undisturbed propagandism. It is a piece of idle sentimentality that truth, merely as truth, has any inherent power denied to error of prevailing against the dungeon and the stake. Men are not more zealous for truth than they often are for error, and a sufficient application

of legal or even of social penalties will generally succeed in stopping the propagation of either. The real advantage which truth has consists in this, that when an opinion is true, it may be extinguished once, twice, or many times, but in the course of ages there will generally be found persons to rediscover it, until some one of its reappearances falls on a time when from favorable circumstances it escapes persecution until it has made such head as to withstand all subsequent attempts to suppress it.

It will be said, that we do not now put to death the introducers of new opinions: we are not like our fathers who slew the prophets, we even build sepulchres to them. It is true we no longer put heretics to death; and the amount of penal infliction which modern feeling would probably tolerate, even against the most obnoxious opinions, is not sufficient to extirpate them. But let us not flatter ourselves that we are yet free from the stain even of legal persecution. Penalties for opinion, or at least for its expression, still exist by law; and their enforcement is not, even in these times, so unexampled as to make it at all incredible that they may some day be revived in full force. In the year 1857, at the summer assizes of the county of Cornwall, an unfortunate man, said to be of unexceptionable conduct in all relations of life, was sentenced to twenty-one months' imprisonment, for uttering, and writing on a gate, some offensive words concerning Christianity. Within a month of the same time, at the Old Bailey, two persons, on two separate occasions, were rejected as jurymen, and one of them grossly insulted by the judge and by one of the counsel, because they honestly declared that they had no theological belief; and a third, a foreigner, for the same reason, was denied justice against a thief. This refusal or redress took place in virtue of the legal doctrine, that no person can be allowed to give evidence in a court of justice who does not profess belief in a God (any god is sufficient) and in a future state; which is equivalent to declaring such persons to be outlaws, excluded from the protection of the tribunals; who may not only be robbed or assaulted with impunity, if no one but themselves, or persons of similar opinions, be present, but any one else may be robbed or assaulted with impunity, if the proof of the fact depends on their evidence. The assumption on which this is grounded is that the oath is worthless of a person who does not believe in a future state; a proposition which betokens much ignorance of history in those who assent to it (since it is historically true that a large proportion of infidels in all ages have been persons of distinguished integrity and honor); and would be maintained by no one who had the smallest conception how many of the persons in greatest repute with the world, both for virtues and attainments, are well known, at least to their intimates, to be unbelievers. The rule, besides, is suicidal,

and cuts away its own foundation. Under pretence that atheists must be liars it admits the testimony of all atheists who are willing to lie, and rejects only those who brave the obloquy of publicly confessing a detested creed rather than affirm a falsehood. A rule thus self-convicted of absurdity so far as regards its professed purpose, can be kept in force only as a badge of hatred, a relic of persecution; a persecution, too, having the peculiarity that the qualification for undergoing it is being clearly proved not to deserve it. The rule, and the theory it implies, are hardly less insulting to believers than to infidels. For if he who does not believe in a future state necessarily lies, it follows that they who do believe are only prevented from lying, if prevented they are, by the fear of hell. We will not do the authors and abettors of the rule the injury of supposing that the conception which they have formed of Christian virtue is drawn from their own consciousness.

These, indeed, are but rags and remnants of persecution, and may be thought to be not so much an indication of the wish to persecute, as an example of that very frequent infirmity of English minds, which makes them take a preposterous pleasure in the assertion of a bad principle, when they are no longer bad enough to desire to carry it really into practice. But unhappily there is no security in the state of the public mind that the suspension of worse forms of legal persecution, which has lasted for about the space of a generation, will continue. In this age the quiet surface of routine is as often ruffled by attempts to resuscitate past evils, as to introduce new benefits. What is boasted of at the present time as the revival of religion, is always, in narrow and uncultivated minds, at least as much the revival of bigotry; and where there is the strong permanent leaven of intolerance in the feelings of a people, which at all times abides in the middle classes of this country, it needs but little to provoke them into actively persecuting those whom they have never ceased to think proper objects of persecution. * For it is this—it is the opinions men entertain, and the feelings they cherish, respecting those who disown the beliefs they deem important which

* Ample warning may be drawn from the large infusion of the passions of a persecutor, who mingled with the general display of the worst parts of our national character on the occasion of the Sepoy insurrection. The cutegs of fæetics or charlatans from the pulpit may be unworthy of note, but the extirpation of the Evangelical party have announced as their predominant, because the government of Hindoos and Mahomedans, that no schools be but a short time, at no public employment be given to any but real or turbid propagandism. An Under-Secretary of State in a speech delivered merely as truth, has he 12th of November, 1857, is reported to have said: "ing against the dungeo" (the faith of a hundred million of British sub- for truth than they offer, which they called religion, by the British Govern- retarding the ascendancy of the British name,

makes this country not a place of mental freedom. For a long time past, the chief mischief of the legal penalties is that they strengthen the social stigma. It is that stigma which is really effective, and so effective is it, that the profession of opinions which are under the ban of society is much less common in England than is, in many other countries, the avowal of those which incur risk of judicial punishment. In respect to all persons but those whose pecuniary circumstances make them independent of the good will of other people, opinion, on this subject, is as efficacious as law; men might as well be imprisoned, as excluded from the means of earning their bread. Those whose bread is already secured, and who desire no favors from men in power, or from bodies of men, or from the public, have nothing to fear from the open avowal of any opinions, but to be ill-thought of and ill-spoken of, and this it ought not to require a very heroic mold to enable them to bear. There is no room for any appeal *ad misericordiam* in behalf of such persons. But though we not do now inflict so much evil on those who think differently from us as it was formerly our custom to do, it may be that we do ourselves as much evil as ever by our treatment of them. Socrates was put to death, but the Socratic philosophy rose like the sun in heaven, and spread its illumination over the whole intellectual firmament. Christians were cast to the lions, but the Christian church grew up a stately and spreading tree, overtopping the older and less vigorous growths, and stifling them by its shade. Our merely social intolerance kills no one, roots out no opinions, but induces men to disguise them, or to abstain from any active effort for their diffusion. With us, heretical opinions do not perceptibly gain, or even lose, ground in each decade or generation; they never blaze out far and wide, but continue to smolder in the narrow circles of thinking and studious persons among whom they originate, without ever lighting up the general affairs of mankind with either a true or a deceptive light. And thus is kept up a state of things very satisfactory to some minds, because, without the unpleasant process of fining or imprisoning anybody, it maintains all prevailing opinions

and preventing the salutary growth of Christianity. . . . Toleration was the great corner-stone of the religious liberties of this country; but do not let them abuse that precious word toleration. As he understood it, it meant the complete liberty of all, freedom of worship, among Christians, who worshipped upon the same foundation. It meant toleration of all sects and denominations of Christians who believed in the one mediation." I desire to call attention to the fact, that a man who has been deemed fit to fill a high office in the government of this country under a liberal ministry, maintains the doctrine that all who do not believe in the divinity of Christ are beyond the pale of toleration. Who, after this imbecile display, can indulge the illusion that religious persecution has passed away, never to return?

outwardly undisturbed, while it does not absolutely interdict the exercise of reason by dissentients afflicted with the malady of thought. A convenient plan for having peace in the intellectual world, and keeping all things going on therein very much as they do already. But the price paid for this sort of intellectual pacification is the sacrifice of the entire moral courage of the human mind. A state of things in which a large portion of the most active and inquiring intellects find it advisable to keep the general principles and grounds of their convictions within their own breasts, and attempt, in what they address to the public, to fit as much as they can of their own conclusions to premises which they have internally renounced, cannot send forth the open, fearless characters, and logical, consistent intellects who once adorned the thinking world. The sort of men who can be looked for under it, are either mere conformers to commonplace, or time-servers for truth, whose arguments on all great subjects are meant for their hearers, and are not those which have convinced themselves. Those who avoid this alternative, do so by narrowing their thoughts and interest to things which can be spoken of without venturing within the region of principles, that is, to small practical matters, which would come right of themselves, if but the minds of mankind were strengthened and enlarged, and which will never be made effectually right until then: while that which would strengthen and enlarge men's minds, free and daring speculation on the highest subjects, is abandoned.

Those in whose eye this reticence on the part of heretics is no evil should consider, in the first place, that in consequence of it there is never any fair and thorough discussion of heretical opinions; and that such of them as could not stand such a discussion, though they may be prevented from spreading, do not disappear. But it is not the minds of heretics that are deteriorated mostly by the ban placed on all inquiry which does not end in the orthodox conclusions. The greatest harm done is to those who are not heretics, and whose whole mental development is cramped, and their reason cowed, by the fear of heresy. Who can compute what the world loses in the multitude of promising intellects combined with timid characters, who dare not follow out any bold, vigorous, independent train of thought, lest it should land them in something which would admit of being considered irreligious or immoral? Among them we may occasionally see some man of deep conscientiousness, and subtle and refined understanding, who spends a life in sophisticating with an intellect which he cannot silence, and exhausts the resources of ingenuity in attempting to reconcile the promptings of his conscience and reason with orthodoxy, which yet he does not, perhaps, to the end succeed in doing. No one can be a great thinker who does not recognize, that as a thinker it is his first duty to follow his intellect to what-

ever conclusions it may lead. Truth gains more even by the errors of one who, with due study and preparation, thinks for himself, than by the true opinions of those who only hold them because they do not suffer themselves to think. Not that it is solely, or chiefly, to form great thinkers, that freedom of thinking is required. On the contrary, it is as much and even more indispensable to enable average human beings to attain the mental stature which they are capable of. There have been, and may again be, great individual thinkers in a general atmosphere of mental slavery. But there never has been, nor ever will be, in that atmosphere an intellectually active people. Where any people has made a temporary approach to such a character, it has been because the dread of heterodox speculation was for a time suspended. Where there is a tacit convention that principles are not to be disputed; where the discussion of the greatest questions which can occupy humanity is considered to be closed, we cannot hope to find that generally high scale of mental activity which has made some periods of history so remarkable. Never when controversy avoided the subjects which are large and important enough to kindle enthusiasm, was the mind of a people stirred up from its foundations, and the impulse given which raised even persons of the most ordinary intellect to something of the dignity of thinking beings. Of such we have had an example in the condition of Europe during the times immediately following the Reformation; another, though limited to the Continent and to a more cultivated class, in the speculative movement of the latter half of the eighteenth century; and a third, of still briefer duration, in the intellectual fermentation of Germany during the Goethian and Fichtean period. These periods differed widely in the particular opinions which they developed; but were alike in this, that during all three the yoke of authority was broken. In each, an old mental despotism had been thrown off, and no new one had yet taken its place. The impulse given at these three periods has made Europe what it now is. Every single improvement which has taken place either in the human mind or in institutions, may be traced distinctly to one or the other of them. Appearances have for some time indicated that all three impulses are well nigh spent; and we can expect no fresh start until we again assert our mental freedom.

Let us now pass to the second division of the argument, and dismissing the supposition that any of the received opinions may be false, let us assume them to be true, and examine into the worth of the manner in which they are likely to be held, when their truth is not freely and openly canvassed. However unwillingly a person who has a strong opinion may admit the possibility that his opinion may be false, he ought to be moved by the consideration that, however true it may be, if it is not fully, frequently, and fearlessly dis-

cussed, it will be held as a dead dogma, not a living truth.

There is a class of persons (happily not quite so numerous as formerly) who think it enough if a person assents undoubtingly to what they think true, though he has no knowledge whatever of the grounds of the opinion, and could not make a tenable defence of it against the most superficial objections. Such persons, if they can once get their creed taught from authority, naturally think that no good, and some harm, comes of its being allowed to be questioned. Where their influence prevails, they make it nearly impossible for the received opinion to be rejected wisely and considerately, though it may still be rejected rashly and ignorantly; for to shut out discussion entirely is seldom possible, and when it once gets in, beliefs not grounded on conviction are apt to give way before the slightest semblance of an argument. Waiving, however, this possibility—assuming that the true opinion abides in the mind, but abides as a prejudice, a belief independent of, and proof against, argument—this is not the way in which truth ought to be held by a rational being. This is not knowing the truth. Truth, thus held, is but one superstition the more, accidentally clinging to the words which enunciate a truth.

If the intellect and judgment of mankind ought to be cultivated, a thing which Protestants at least do not deny, on what can these faculties be more appropriately exercised by any one, than on the things which concern him so much that it is considered necessary for him to hold opinions on them? If the cultivation of the understanding consists in one thing more than in another, it is surely in learning the grounds of one's own opinions. Whatever people believe, on subjects on which it is of the first importance to believe rightly, they ought to be able to defend against at least the common objections. But, some one may say, "Let them be taught the grounds of their opinions. It does not follow that opinions must be merely parroted because they are never heard controverted. Persons who learn geometry do not simply commit the theorems to memory, but understand and learn likewise the demonstrations; and it would be absurd to say that they remain ignorant of the grounds of geometrical truths, because they never hear any one deny, and attempt to disprove them." Undoubtedly: and such teaching suffices on a subject like mathematics, where there is nothing at all to be said on the wrong side of the question. The peculiarity of the evidence of mathematical truths is that all the argument is on one side. There are no objections, and no answers to objections. But on every subject on which difference of opinion is possible, the truth depends on a balance to be struck between two sets of conflicting reasons. Even in natural philosophy, there is always some other explanation possible of the same facts; some geocentric theory in-

stead of heliocentric, some phlogiston instead of oxygen; and it has to be shown why that other theory cannot be the true one: and until this is shown, and until we know how it is shown, we do not understand the grounds of our opinion. But when we turn to subjects infinitely more complicated, to morals, religion, politics, social relations, and the business of life, three-fourths of the arguments for every disputed opinion consist in dispelling the appearances which favor some opinion different from it. The greatest orator, save one, of antiquity, has left it on record that he always studied his adversary's case with as great, if not still greater, intensity than even his own. What Cicero practised as the means of forensic success requires to be imitated by all who study any subject in order to arrive at the truth. He who knows only his own side of the case, knows little of that. His reasons may be good, and no one may have been able to refute them. But if he is equally unable to refute the reasons on the opposite side; if he does not so much as know what they are, he has no ground for preferring either opinion. The rational position for him would be suspension of judgment, and unless he contents himself with that, he is either led by authority, or adopts, like the generality of the world, the side to which he feels most inclination. Nor is it enough that he should hear the arguments of adversaries from his own teachers, presented as they state them, and accompanied by what they offer as refutations. That is not the way to do justice to the arguments, or bring them into real contact with his own mind. He must be able to hear them from persons who actually believe them; who defend them in earnest, and do their very utmost for them. He must know them in their most plausible and persuasive form; he must feel the whole force of the difficulty which the true view of the subject has to encounter and dispose of; else he will never really possess himself of the portion of truth which meets and removes that difficulty. Ninety-nine in a hundred of what are called educated men are in this condition; even of those who can argue fluently for their opinions. Their conclusion may be true, but it might be false for anything they know: they have never thrown themselves into the mental position of those who think differently from them, and considered what such persons may have to say; and consequently they do not, in any proper sense of the word, know the doctrine which they themselves profess. They do not know those parts of it which explain and justify the remainder; the considerations which show that a fact which seemingly conflicts with another is reconcilable with it, or that, of two apparently strong reasons, one and not the other ought to be preferred. All that part of the truth which turns the scale, and decides the judgment of a completely informed mind, they are strangers to; nor is it ever really known, but to those who have attended equally

and impartially to both sides, and endeavored to see the reasons of both in the strongest light. So essential is this discipline to a real understanding of moral and human subjects, that if opponents of all important truths do not exist, it is indispensable to imagine them, and supply them with the strongest arguments which the most skilful devil's advocate can conjure up.

To abate the force of these considerations, an enemy of free discussion may be supposed to say, that there is no necessity for mankind in general to know and understand all that can be said against or for their opinions by philosophers and theologians. That it is not needful for common men to be able to expose all the misstatements or fallacies of an ingenious opponent. That it is enough if there is always somebody capable of answering them, so that nothing likely to mislead uninstructed persons remains unrefuted. That simple minds, having been taught the obvious grounds of the truths inculcated on them, may trust to authority for the rest, and being aware that they have neither knowledge nor talent to resolve every difficulty which can be raised, may repose in the assurance that all those which have been raised have been or can be answered, by those who are specially trained to the task.

Conceding to this view of the subject the utmost that can be claimed for it by those most easily satisfied with the amount of understanding of truth which ought to accompany the belief of it; even so, the argument for free discussion is no way weakened. For even this doctrine acknowledges that mankind ought to have a rational assurance that all objections have been satisfactorily answered; and how are they to be answered if that which requires to be answered is not spoken? or how can the answer be known to be satisfactory, if the objectors have no opportunity of showing that it is unsatisfactory? If not the public, at least the philosophers and theologians who are to resolve the difficulties, must make themselves familiar with those difficulties in their most puzzling form; and this cannot be accomplished unless they are freely stated, and placed in the most advantageous light which they admit of. The Catholic Church has its own way of dealing with this embarrassing problem. It makes a broad separation between those who can be permitted to receive its doctrines on conviction, and those who must accept them on trust. Neither, indeed, are allowed any choice as to what they will accept; but the clergy, such at least as can be fully confided in, may admissibly and meritoriously make themselves acquainted with the arguments of opponents, in order to answer them, and may, therefore, read heretical books; the laity, not unless by special permission, hard to be obtained. This discipline recognizes a knowledge of the enemy's case as beneficial to the teachers, but finds means, consistent with this, of denying it to the rest of the world: thus giving

to the *élite* more mental culture, though not more mental freedom, than it allows to the mass. By this device it succeeds in obtaining the kind of mental superiority which its purposes require; for though culture without freedom never made a large and liberal mind, it can make a clever *nisi prius* advocate of a cause. But in countries professing Protestantism, this resource is denied; since Protestants hold, at least in theory, that the responsibility for the choice of a religion must be borne by each for himself, and cannot be thrown off upon teachers. Besides, in the present state of the world, it is practically impossible that writings which are read by the instructed can be kept from the uninstructed. If the teachers of mankind are to be cognizant of all that they ought to know, everything must be free to be written and published without restraint.

If, however, the mischievous operation of the absence of free discussion, when the received opinions are true, were confined to leaving men ignorant of the grounds of those opinions, it might be thought that this, if an intellectual, is no moral evil, and does not affect the worth of the opinions, regarded in their influence on the character. The fact, however, is, that not only the grounds of the opinion are forgotten in the absence of discussion, but too often the meaning of the opinion itself. The words which convey it cease to suggest ideas, or suggest only a small portion of those they were originally employed to communicate. Instead of a vivid conception and a living belief, there remain only a few phrases retained by rote; or, if any part, the shell and husk only of the meaning is retained, the finer essence being lost. The great chapter in human history which this fact occupies and fills, cannot be too earnestly studied and meditated on.

It is illustrated in the experience of almost all ethical doctrines and religious creeds. They are all full of meaning and vitality to those who originate them, and to the direct disciples of the originators. Their meaning continues to be felt in undiminished strength, and is perhaps brought out into even fuller consciousness, so long as the struggle lasts to give the doctrine or creed an ascendancy over other creeds. At last it either prevails, and becomes the general opinion, or its progress stops; it keeps possession of the ground it has gained, but ceases to spread further. When either of these results has become apparent, controversy on the subject flags, and gradually dies away. The doctrine has taken its place, if not as a received opinion, as one of the admitted sects or divisions of opinion: those who hold it have generally inherited, not adopted it; and conversion from one of these doctrines to another, being now an exceptional fact, occupies little place in the thoughts of their professors. Instead of being, as at first, constantly on the alert either to defend themselves against the world, or to bring the world over to

them, they have subsided into acquiescence, and neither listen, when they can help it, to arguments against their creed, nor trouble dissentients (if there be such) with arguments in its favor. From this time may usually be dated the decline in the living power of the doctrine. We often hear the teachers of all creeds lamenting the difficulty of keeping up in the minds of believers a lively apprehension of the truth which they nominally recognize, so that it may penetrate the feelings, and acquire a real mastery over the conduct. No such difficulty is complained of while the creed is still fighting for its existence: even the weaker combatants then know and feel what they are fighting for, and the difference between it and other doctrines; and in that period of every creed's existence, not a few persons may be found, who have realized its fundamental principles in all the forms of thought, have weighed and considered them in all their important bearings, and have experienced the full effect on the character which belief in that creed ought to produce in a mind thoroughly imbued with it. But when it has come to be an hereditary creed, and to be received passively, not actively—when the mind is no longer compelled, in the same degree as at first, to exercise its vital powers on the questions which its belief presents to it, there is a progressive tendency to forget all of the belief except the formularies, or to give it a dull and torpid assent, as if accepting it on trust dispensed with the necessity of realizing it in consciousness, or testing it by personal experience, until it almost ceases to connect itself at all with the inner life of the human being. Then are seen the cases, so frequent in this age of the world as almost to form the majority, in which the creed remains as it were outside the mind, incrusting and petrifying it against all other influence addressed to the higher parts of our nature; manifesting its power by not suffering any fresh and living conviction to get in, but itself doing nothing for the mind or heart, except standing sentinel over them to keep them vacant.

To what an extent doctrines intrinsically fitted to make the deepest impression upon the mind may remain in it as dead beliefs, without being ever realized in the imagination, the feelings, or the understanding, is exemplified by the manner in which the majority of believers hold the doctrines of Christianity. By Christianity I here mean what is accounted such by all churches and sects—the maxims and precepts contained in the New Testament. These are considered sacred, and accepted as laws, by all professing Christians. Yet it is scarcely too much to say that not one Christian in a thousand guides or tests his individual conduct by reference to those laws. The standard to which he does refer it, is the custom of his nation, his class, or his religious profession. He has thus, on the one hand, a collection of ethical maxims, which he believes to have been vouch-

safed to him by infallible wisdom as rules for his government; and on the other a set of every-day judgments and practices, which go a certain length with some of those maxims, not so great a length with others, stand in direct opposition to some, and are, on the whole, a compromise between the Christian creed and the interests and suggestions of worldly life. To the first of these standards he gives his homage; to the other his real allegiance. All Christians believe that the blessed are the poor and humble, and those who are ill-used by the world; that it is easier for a camel to pass through the eye of a needle than for a rich man to enter the kingdom of heaven; that they should judge not, lest they be judged; that they should swear not at all; that they should love their neighbor as themselves; that if one take their cloak, they should give him their coat also; that they should take no thought for the morrow; that if they would be perfect they should sell all that they have and give it to the poor. They are not insincere when they say that they believe these things. They do believe them, as people believe what they have always heard lauded and never discussed. But in the sense of that living belief which regulates conduct, they believe these doctrines just up to the point to which it is usual to act upon them. The doctrines in their integrity are serviceable to pelt adversaries with; and it is understood that they are to be put forward (when possible) as the reasons for whatever people do that they think laudable. But any one who reminded them that the maxims require an infinity of things which they never even think of doing, would gain nothing but to be classed among those very unpopular characters who affect to be better than other people. The doctrines have no hold on ordinary believers—are not a power in their minds. They have an habitual respect for the sound of them, but no feeling which spreads from the words to the things signified, and forces the mind to take them in, and make them conform to the formula. Whenever conduct is concerned, they look round for Mr. A and B to direct them how far to go in obeying Christ.

Now we may be well assured that the case was not thus, but far otherwise, with the early Christians. Had it been thus, Christianity never would have expanded from an obscure sect of the despised Hebrews into the religion of the Roman empire. When their enemies said, "See how these Christians love one another" (a remark not likely to be made by anybody now), they assuredly had a much livelier feeling of the meaning of their creed than they have ever had since. And to this cause, probably, it is chiefly owing that Christianity now makes so little progress in extending its domain, and after eighteen centuries is still nearly confined to Europeans and the descendants of Europeans. Even with the strictly religious, who are much in earnest about their doctrines, and attach a greater

amount of meaning to many of them than people in general, it commonly happens that the part which is thus comparatively active in their minds is that which was made by Calvin, or Knox, or some such person much nearer in character to themselves. The savings of Christ coexist passively in their minds, producing hardly any effect beyond what is caused by mere listening to words so amiable and bland. There are many reasons, doubtless, why doctrines which are the badge of a sect retain more of their vitality than those common to all recognized sects, and why more pains are taken by teachers to keep their meaning alive; but one reason certainly is, that the peculiar doctrines are more questioned, and have to be oftener defended against open gainsages. Both teachers and learners go to sleep at their post, as soon as there is no enemy in the field.

The same thing holds true, generally speaking, of all traditional doctrines—those of prudence and knowledge of life, as well as of morals or religion. All languages and literatures are full of general observations on life, both as to what it is, and how to conduct oneself in it; observations which everybody knows, which everybody repeats, or hears with acquiescence, which are received as truisms, yet of which most people first truly learn the meaning when experience, generally of a painful kind, has made it a reality to them. How often, when smarting under some unforeseen misfortune or disappointment, does a person call to mind some proverb or common saying, familiar to him all his life, the meaning of which, if he had ever before felt it as he does now, would have saved him from the calamity. There are indeed reasons for this, other than the absence of discussion; there are many truths of which the full meaning cannot be realized until personal experience has brought it home. But much more of the meaning even of these would have been understood, and what was understood would have been far more deeply impressed on the mind, if the man had been accustomed to hear it argued *pro* and *con* by people who did understand it. The fatal tendency of mankind to leave off thinking about a thing when it is no longer doubtful, is the cause of half their errors. A contemporary author has well spoken of “the deep slumber of a decided opinion.”

But what! (it may be asked) Is the absence of unanimity an indispensable condition of true knowledge? Is it necessary that some part of mankind should persist in error to enable any to realise the truth? Does a belief cease to be real and vital as soon as it is generally received—and is a proposition never thoroughly understood and felt unless some doubt it of remains? As soon as mankind have unanimously accepted a truth, does the truth perish within them? The highest aim and best result of improved intelligence, it has hitherto been thought, is to unite mankind more and more in the acknowledgment of all important truths; and does the intelligence only

last as long as it has not achieved its object? Do the fruits of conquest perish by the very completeness of the victory?

I affirm no such thing. As mankind improve, the number of doctrines which are no longer disputed or doubted will be constantly on the increase: and the well-being of mankind may almost be measured by the number and gravity of the truths which have reached the point of being uncontested. The cessation, on one question after another, of serious controversy, is one of the necessary incidents of the consolidation of opinion; a consolidation as salutary in the case of true opinions, as it is dangerous and noxious when the opinions are erroneous. But though this gradual narrowing of the bounds of diversity of opinion is necessary in both senses of the term, being at once inevitable and indispensable, we are not therefore obliged to conclude that all its consequences must be beneficial. The loss of so important an aid to the intelligent and living apprehension of a truth, as is afforded by the necessity of explaining it to, or defending it against, opponents, though not sufficient to outweigh, is no trifling drawback from, the benefit of its universal recognition. Where this advantage can no longer be had, I confess I should like to see the teachers of mankind endeavouring to provide a substitute for it; some contrivance for making the difficulties of the question as present to the learner's consciousness, as if they were pressed upon him by a dissentient champion, eager for his conversion.

But instead of seeking contrivances for this purpose, they have lost those they formerly had. The Socratic dialectics, so magnificently exemplified in the dialogues of Plato, were a contrivance of this description. They were essentially a negative discussion of the great question of philosophy and life, directed with consummate skill to the purpose of convincing any one who had merely adopted the commonplaces of received opinion that he did not understand the subject—that he as yet attached no definite meaning to the doctrines he professed; in order that, becoming aware of his ignorance, he might be put in the way to obtain a stable belief, resting on a clear apprehension both of the meaning of doctrines and of their evidence. The school disputations of the Middle Ages had a somewhat similar object. They were intended to make sure that the pupil understood his own opinion, and (by necessary correlation) the opinion opposed to it, and could enforce the grounds of the one and confute those of the other. These last-mentioned contests had indeed the incurable defect, that the premises appealed to were taken from authority, not from reason; and, as a discipline to the mind, they were in every respect inferior to the powerful dialectics which formed the intellects of the "*Socratici viri*;" but the modern mind owes far more to both than it is generally willing to admit, and the present modes of education contain nothing which in the smallest degree supplies the place

either of the one or of the other. A person who derives all his instructions from teachers or books, even if he escape the besetting temptation of contending himself with cram, is under no compulsion to hear both sides; accordingly it is far from a frequent accomplishment, even among thinkers, to know both sides; and the weakest part of what everybody says in defence of his opinion is what he intends as a reply to antagonists. It is the fashion of the present time to disparage negative logic—that which points out weaknesses in theory or errors in practice, without establishing positive truths. Such negative criticism would indeed be poor enough as an ultimate result; but as a means to attaining any positive knowledge or conviction worthy the name, it cannot be valued too highly; and until people are again systematically trained to it, there will be few great thinkers, and a low general average of intellect, in any but the mathematical and physical departments of speculation. On any other subject no one's opinions deserve the name of knowledge, except so far as he has either had forced upon him by others, or gone through of himself, the same mental process which would have been required of him in carrying on an active controversy with opponents. That, therefore, which when absent, it is so indispensable, but so difficult, to create, how worse than absurd it is to forego, when spontaneously offering itself! If there are any persons who contest a received opinion, or who will do so if law or opinion will let them, let us thank them for it, open our minds to listen to them, and rejoice that there is some one to do for us what we otherwise ought, if we have any regard for either the certainty or the vitality of our convictions, to do with much greater labour for ourselves.

It still remains to speak of one of the principal causes which makes diversity of opinion advantageous, and will continue to do so until mankind shall have entered a stage of intellectual advancement which at present seems at an incalculable distance. We have hitherto considered only two possibilities: that the received opinion may be false, and some other opinion, consequently, true; or that, the received opinion being true, a conflict with the opposite error is essential to a clear apprehension and deep feeling of its truth. But there is a commoner case than either of these; when the conflicting doctrines, instead of being one true and the other false, share the truth between them; and the nonconforming opinion is needed to supply the remainder of the truth, of which the received doctrine embodies only a part. Popular opinions, on subjects not palpable to sense, are often true, but seldom or never the whole truth. They are a part of the truth; sometimes a greater, sometimes a smaller part, but exaggerated, distorted, and disjointed from the truths by which they ought to be accompanied and limited. Heretical opinions, on the other hand,

are generally some of these suppressed and neglected truths, bursting the bonds which kept them down, and either seeking reconciliation with the truth contained in the common opinion, or fronting it as enemies, and setting themselves up, with similar exclusiveness, as the whole truth. The latter case is hitherto the most frequent, as, in the human mind, one-sidedness has always been the rule, and many-sidedness the exception. Hence, even in revolutions of opinion, one part of the truth usually sets while another rises. Even progress, which ought to superadd, for the most part only substitutes, one partial and incomplete truth for another; improvement consisting chiefly in this, that the new fragment of truth is more wanted, more adapted to the needs of the time, than that which it displaces. Such being the partial character of prevailing opinions, even when resting on a true foundation, every opinion which embodies somewhat of the portion of truth which the common opinion omits, ought to be considered precious, with whatever amount of error and confusion that truth may be blended. No sober judge of human affairs will feel bound to be indignant because those who force on our notice truths which we should otherwise have overlooked, overlook some of those which we see. Rather, he will think that so long as popular truth is one-sided, it is more desirable than otherwise that unpopular truth should have one-sided assertors too; such being usually the the most energetic, and the most likely to compel reluctant attention to the fragment of wisdom which they proclaim as if it were the whole.

Thus, in the eighteenth century, when nearly all the instructed, and all those of the uninstructed who were led by them, were lost in admiration of what is called civilisation, and of the marvels of modern science, literature, and philosophy, and while greatly overrating the amount of unlikeness between the men of modern and those of ancient times, indulged the belief that the whole of the difference was in their own favour; with what a salutary shock did the paradoxes of Rousseau explode like bombshells in the midst, dislocating the compact mass of one-sided opinion, and forcing its elements to recombine in a better form and with additional ingredients. Not that the current opinions were on the whole farther from the truth than Rousseau's were; on the contrary, they were nearer to it; they contained more of positive truth, and very much less of error. Nevertheless there lay in Rousseau's doctrine, and has floated down the stream of opinion along with it, a considerable amount of exactly those truths which the popular opinion wanted; and these are the deposit which was left behind when the flood subsided. The superior worth of simplicity of life, the enervating and demoralising effect of the trammels and hypocrisies of artificial society, are ideas which have never been entirely absent from cultivated minds since Rousseau wrote; and

they will in time produce their due effect, though at present needing to be asserted as much as ever, and to be asserted by deeds, for words, on this subject, have nearly exhausted their power.

In politics, again, it is almost a commonplace, that a party of order or stability, and a party of progress or reform, are both necessary elements of a healthy state of political life; until the one or the other shall have so enlarged its mental grasp as to be a party equally of order and of progress, knowing and distinguishing what is fit to be preserved from what ought to be swept away. Each of these modes of thinking derives its utility from the deficiencies of the other; but it is in a great measure the opposition of the other that keeps each within the limits of reason and sanity. Unless opinions favourable to democracy and to aristocracy, to property and to equality, to co-operation and to competition, to luxury and to abstinence, to sociality and individuality, to liberty and discipline, and all the other standing antagonisms of practical life, are expressed with equal freedom, and enforced and defended with equal talent and energy, there is no chance of both elements obtaining their due; one scale is sure to go up, and the other down. Truth, in the great practical concerns of life, is so much a question of the reconciling and combining of opposites, that very few have minds sufficiently capacious and impartial to make the adjustment with an approach to correctness, and it has to be made by the rough process of a struggle between combatants fighting under hostile banners. On any of the great open questions just enumerated, if either of the two opinions has a better claim than the other, not merely to be tolerated, but to be encouraged and countenanced, it is the one which happens at the particular time and place to be in a minority. That is the opinion which, for the time being, represents the neglected interests, the side of human well-being which is in danger of obtaining less than its share. I am aware that there is not, in this country, any intolerance of differences of opinion on most of these topics. They are adduced to show, by admitted and multiplied examples, the universality of the fact, that only through diversity of opinion is there, in the existing state of human intellect, a chance of fair play to all sides of the truth. When there are persons to be found who form an exception to the apparent unanimity of the world on any subject, even if the world is in the right, it is always probable that dissentients have something worth hearing to say for themselves, and that truth would lose something by their silence.

It may be objected, "But some received principles, especially on the highest and most vital subjects, are more than half-truths. The Christian morality, for instance, is the whole truth on that subject, and if any one teaches a morality which varies from it, he is wholly in error." As this is of all cases the most important in practice, none can be fitter to test the general maxim. But before pronouncing what

Christian morality is or is not, it would be desirable to decide what is meant by Christian morality. If it means the morality of the New Testament, I wonder that any one who derives his knowledge of this from the book itself, can suppose that it was announced, or intended, as a complete doctrine of morals. The Gospel always refers to a pre-existing morality, and confines its precepts to the particulars in which that morality was to be corrected, or superseded by a wider and higher; expressing itself, moreover, in terms most general, often impossible to be interpreted literally, and possessing rather the impressiveness of poetry or eloquence than the precision of legislation. To extract from it a body of ethical doctrine, has never been possible without eking it out from the Old Testament, that is, from a system elaborate indeed, but in many respects barbarous, and intended only for a barbarous people. St. Paul, a declared enemy to this Judaical mode of interpreting the doctrine and filling up the scheme of his Master, equally assumes a pre-existing morality, namely that of the Greeks and Romans; and his advice to Christians is in a great measure a system of accommodation to that; even to the extent of giving an apparent sanction to slavery. What is called Christian, but should rather be termed theological, morality, was not the work of Christ or the Apostles, but is of much later origin, having been gradually built up by the Catholic church of the first five centuries, and though not implicitly adopted by moderns and Protestants, has been much less modified by them than might have been expected. For the most part, indeed, they have contented themselves with cutting off the additions which had been made to it in the Middle Ages, each sect supplying the place by fresh additions, adapted to its own character and tendencies. That mankind owe a great debt to this morality, and to its early teachers, I should be the last person to deny; but I do not scruple to say of it that it is, in many important points, incomplete and one-sided, and that unless ideas and feelings, not sanctioned by it, had contributed to the formation of European life and character, human affairs would have been in a worse condition than they now are. Christian morality (so called) has all the characters of a reaction; it is, in great part, a protest against Paganism. Its ideal is negative rather than positive; passive rather than active; Innocence rather than Nobleness; Abstinence from Evil, rather than energetic Pursuit of Good; in its precepts (as has been well said) "thou shalt not" predominates unduly over "thou shalt." In its horror of sensuality, it made an idol of asceticism, which has been gradually compromised away into one of legality. It holds out the hope of heaven and the threat of hell, as the appointed and appropriate motives to a virtuous life: in this falling far below the best of the ancients, and doing what lies in it to give to human morality an essentially selfish character, by disconnecting each man's feelings of duty from the interests

of his fellow-creatures, except so far as a self-interested inducement is offered to him for consulting them. It is essentially a doctrine of passive obedience; it inculcates submission to all authorities found established; who indeed are not to be actively obeyed when they command what religion forbids, but who are not to be resisted, far less rebelled against, for any amount of wrong to ourselves. And while, in the morality of the best Pagan nations, duty to the State holds even a disproportionate place, infringing on the just liberty of the individual; in purely Christian ethics, that grand department of duty is scarcely noticed or acknowledged. It is in the Koran, not the New Testament, that we read the maxim—"A ruler who appoints any man to an office, when there is in his dominions another man better qualified for it, sins against God and against the State." What little recognition the idea of obligation to the public obtains in modern morality is derived from Greek and Roman sources, not from Christian; as, even in the morality of private life, whatever exists of magnanimity, highmindedness, personal dignity, even the sense of honour, is derived from the purely human, not the religious part of our education, and never could have grown out of a standard of ethics in which the only worth, professedly recognised, is that of obedience.

I am as far as any one from pretending that these defects are necessarily inherent in the Christian ethics in every manner in which it can be conceived, or that the many requisites of a complete moral doctrine which it does not contain do not admit of being reconciled with it. Far less would I insinuate this of the doctrines and precepts of Christ himself. I believe that the sayings of Christ are all that I can see any evidence of their having been intended to be; that they are irreconcilable with nothing which a comprehensive morality requires; that everything which is excellent in ethics may be brought within them, with no greater violence to their language than has been done to it by all who have attempted to deduce from them any practical system of conduct whatever. But it is quite consistent with this to believe that they contain, and were meant to contain, only a part of the truth; that many essential elements of the highest morality are among the things which are not provided for, nor intended to be provided for, in the recorded deliverances of the Founder of Christianity, and which have been entirely thrown aside in the system of ethics erected on the basis of those deliverances by the Christian Church. And this being so, I think it is a great error to persist in attempting to find in the Christian doctrine that complete rule for our guidance which its author intended it to sanction and enforce, but only partially to provide. I believe, too, that this narrow theory is becoming a grave practical evil, detracting greatly from the moral training and institution which so many well-meaning persons are now at length exerting themselves to promote. I much fear that by at-

tempting to form the mind and feelings on an exclusively religious type, and discarding those secular standards (as for want of a better name they may be called) which heretofore co-existed with and supplemented the Christian ethics, receiving some of its spirit, and infusing into it some of theirs, there will result, and is even now resulting, a low, abject, servile type of character, which, submit itself as it may to what it deems the Supreme Will, is incapable of rising to or sympathising in the conception of Supreme Goodness. I believe that other ethics than any which can be evolved from exclusively Christian sources, must exist side by side with Christian ethics to produce the moral regeneration of mankind; and that the Christian system is no exception to the rule, that in an imperfect state of the human mind the interests of truth require a diversity of opinions. It is not necessary that in ceasing to ignore the moral truths not contained in Christianity men should ignore any of those which it does contain. Such prejudice, or oversight, when it occurs, is altogether an evil; but it is one from which we cannot hope to be always exempt, and must be regarded as the price paid for an inestimable good. The exclusive pretension made by a part of the truth to be the whole, must and ought to be protested against; and if a reactionary impulse should make the protestors unjust in their turn, this one-sidedness, like the other, may be lamented, but must be tolerated. If Christians would teach infidels to be just to Christianity, they should themselves be just to infidelity. It can do truth no service to blink the fact, known to all who have the most ordinary acquaintance with literary history, that a large portion of the noblest and most valuable moral teaching has been the work, not only of men who did not know, but of men who knew and rejected, the Christian faith.

I do not pretend that the most unlimited use of the freedom of enunciating all possible opinions would put an end to the evils of religious or philosophical sectarianism. Every truth which men of narrow capacity are in earnest about, is sure to be asserted, inculcated and in many ways even acted on, as if no other truth existed in the world, or at all events none that could limit or qualify the first. I acknowledge that the tendency of all opinions to become sectarian is not cured by the freest discussion, but is often heightened and exacerbated thereby; the truth which ought to have been, but was not, seen, being rejected all the more violently because proclaimed by persons regarded as opponents. But it is not on the impassioned partisan, it is on the calmer and more disinterested bystander, that this collision of opinions works its salutary effect. Not the violent conflict between parts of the truth, but the quiet suppression of half of it, is the formidable evil; there is always hope when people are forced to listen to both sides; it is when they attend only to one that errors harden into prejudices, and truth itself ceases to have the effect of

truth, by being exaggerated into falsehood. And since there are few mental attributes more rare than that judicial faculty which can sit in intelligent judgment between two sides of a question, of which only one is represented by an advocate before it, truth has no chance but in proportion as every side of it, every opinion which embodies any fraction of the truth, not only finds advocates, but is so advocated as to be listened to.

We have now recognised the necessity to the mental well-being of mankind (on which all their other well-being depends) of freedom of opinion, and freedom of the expression of opinion, on four distinct grounds; which we will now briefly recapitulate.

First, if any opinion is compelled to silence, that opinion may, for aught we can certainly know, be true. To deny this is to assume our own infallibility.

Secondly, though the silenced opinion be an error, it may, and very commonly does, contain a portion of truth; and since the general or prevailing opinion on any subject is rarely or never the whole truth, it is only by the collision of adverse opinions that the remainder of the truth has any chance of being supplied.

Thirdly, even if the received opinion be not only true, but the whole truth; unless it is suffered to be, and actually is, vigorously and earnestly contested, it will, by most of those who receive it, be held in the manner of a prejudice, with little comprehension or feeling of its rational grounds. And not only this, but, fourthly, the meaning of the doctrine itself will be in danger of being lost, or enfeebled, and deprived of its vital effect on the character and conduct: the dogma becoming a mere formal profession, inefficacious for good, but cumbering the ground, and preventing the growth of any real and heartfelt conviction, from reason or personal experience.

Before quitting the subject of freedom of opinion, it is fit to take some notice of those who say that the free expression of all opinions should be permitted, on condition that the manner be temperate, and do not pass the bounds of fair discussion. Much might be said on the impossibility of fixing where these supposed bounds are to be placed; for if the test be offence to those whose opinions are attacked, I think experience testifies that this offence is given whenever the attack is telling and powerful, and that every opponent who pushes them hard, and whom they find it difficult to answer, appears to them, if he shows any strong feeling on the subject, an intemperate opponent. But this, though an important consideration in a practical point of view, merges in a more fundamental objection. Undoubtedly the manner of asserting an opinion, even though it be a true one, may be very objectionable, and may justly incur severe censure. But the principal offences of the kind are such as it is

mostly impossible, unless by accidental self-betrayal, to bring home to conviction. The gravest of them is, to argue sophistically, to suppress facts or arguments, to misstate the elements of the case, or misrepresent the opposite opinion. But all this, even to the most aggravated degree, is so continually done in perfect good faith, by persons who are not considered, and in many other respects may not deserve to be considered, ignorant or incompetent, that it is rarely possible, on adequate grounds, conscientiously to stamp the misrepresentation as morally culpable; and still less could law presume to interfere with this kind of controversial misconduct. With regard to what is commonly meant by intemperate discussion, namely invective, sarcasm, personality, and the like, the denunciation of these weapons would deserve more sympathy if it were ever proposed to interdict them equally to both sides; but it is only desired to restrain the employment of them against the prevailing opinion: against the unprevailing they may not only be used without general disapproval, but will be likely to obtain for him who uses them the praise of honest zeal and righteous indignation. Yet whatever mischief arises from their use is greatest when they are employed against the comparatively defenceless; and whatever unfair advantage can be derived by any opinion from this mode of asserting it, accrues almost exclusively to received opinions. The worst offense of this kind which can be committed by a polemic is to stigmatise those who hold the contrary opinion as bad and immoral men. To calumny of this sort, those who hold any unpopular opinion are peculiarly exposed, because they are in general few and uninfluential, and nobody but themselves feels much interested in seeing justice done them; but this weapon is, from the nature of the case, denied to those who attack a prevailing opinion: they can neither use it with safety to themselves, nor, if they could, would it do anything but recoil on their own cause. In general, opinions contrary to those commonly received can only obtain a hearing by studied moderation of language, and the most cautious avoidance of unnecessary offence, from which they hardly ever deviate even in a slight degree without losing ground: while unmeasured vituperation employed on the side of the prevailing opinion really does deter people from professing contrary opinions, and from listening to those who profess them. For the interest, therefore, of truth and justice, it is far more important to restrain this employment of vituperative language than the other; and, for example, if it were necessary to choose, there would be much more need to discourage offensive attacks on infidelity than on religion. It is, however, obvious that law and authority have no business with restraining either, while opinion ought, in every instance, to determine its verdict by the circumstances of the individual case; condemning every one, on whichever side of the

argument he places himself, in whose mode of advocacy either want of candor, or malignity, bigotry, or intolerance of feeling manifest themselves; but on inferring these vices from the side which a person takes, though it be the contrary side of the question to our own; and giving merited honor to every one, whatever opinion he may hold, who has calmness to see and honesty to state what his opponents and their opinions really are, exaggerating nothing to their discredit, keeping nothing back which tells, or can be supposed to tell, in their favor. This is the real morality of public discussion: and if often violated, I am happy to think that there are many controversialists who to a great extent observe it, and a still greater number who conscientiously strive towards it.

CHAPTER III

OF INDIVIDUALITY, AS ONE OF THE ELEMENTS OF WELL-BEING

SUCH being the reasons which make it imperative that human beings should be free to form opinions, and to express their opinions without reserve; and such the baneful consequences to the intellectual, and through that to the moral nature of man, unless this liberty is either conceded, or asserted in spite of prohibition; let us next examine whether the same reasons do not require that men should be free to act upon their opinions—to carry these out in their lives, without hindrance, either physical or moral, from their fellow-men, so long as it is at their own risk and peril. This last proviso is of course indispensable. No one pretends that actions should be as free as opinions. On the contrary, even opinions lose their immunity when the circumstances in which they are expressed are such as to constitute their expression a positive instigation to some mischievous act. An opinion that corn-dealers are starvers of the poor, or that private property is robbery, ought to be unmolested when simply circulated through the press, but may justly incur punishment when delivered orally to an excited mob assembled before the house of a corn-dealer, or when handed about among the same mob in the form of a placard. Acts, of whatever kind, which, without justifiable cause, do harm to others, may be, and in the more important cases absolutely require to be, controlled by the unfavorable sentiments, and, when needful, by the active interference of mankind. The liberty of the individual must be thus far limited; he must not make himself a nuisance to other people. But if he refrains from molesting others in what concerns them, and merely acts according to his own inclination and judgment in things which concern himself, the same reason which show that opinion should be free, prove also that he should be allowed, without molestation, to carry his opinions into practice at his own cost. That mankind are not infallible; that their truths, for the most part, are only half-truths; that unity of opinion, unless resulting from the fullest and freest comparison of opposite opinions, is not desirable, and diversity not an evil, but a good, until mankind are much more capable than at present of recognizing all sides of the truth, are principles applicable to men's modes of action, not less than to their opinions. As it is useful that while mankind are imperfect there should be

different opinions, so it is that there should be different experiments of living; that free scope should be given to varieties of character, short of injury to others; and that the worth of different modes of life should be proved practically, when any one thinks fit to try them. It is desirable, in short, that in things which do not primarily concern others, individuality should assert itself. Where, not the person's own character, but the traditions or customs of other people are the rule of conduct, there is wanting one of the principal ingredients of human happiness, and quite the chief ingredient of individual and social progress.

In maintaining this principle, the greatest difficulty to be encountered does not lie in the appreciation of means towards an acknowledged end, but in the indifference of persons in general to the end itself. If it were felt that the free development of individuality is one of the leading essentials of well-being; that it is not only a co-ordinate element with all that is designated by the terms civilization, instruction, education, culture, but is itself a necessary part and condition of all those things; there would be no danger that liberty should be undervalued, and the adjustment of the boundaries between it and social control would present no extraordinary difficulty. But the evil is, that individual spontaneity is hardly recognized by the common modes of thinking as having any intrinsic worth, or deserving any regard on its own account. The majority, being satisfied with the ways of mankind as they now are (for it is they who make them what they are), cannot comprehend why those ways should not be good enough for everybody; and what is more, spontaneity forms no part of the ideal of the majority of moral and social reformers, but is rather looked on with jealousy, as a troublesome and perhaps rebellious obstruction to the general acceptance of what these reformers, in their own judgment, think would be best for mankind. Few persons, out of Germany, even comprehend the meaning of the doctrine which Wilhelm von Humboldt, so eminent both as a *savant* and as a politician, made the text of a treatise—that “the end of man, or that which is prescribed by the eternal or immutable dictates of reason, and not suggested by vague and transient desires, is the highest and most harmonious development of his powers to a complete and consistent whole;” that, therefore, the object “towards which every human being must ceaselessly direct his efforts, and on which especially those who design to influence their fellow-men must ever keep their eyes, is the individuality of power and development;” that for this there are two requisites, “freedom, and variety of situations;” and that from the union of these arise “individual vigor and manifold diversity,” which combine themselves in “originality.”

Little, however, as people are accustomed to a doctrine like that

of Von Humboldt, and surprising as it may be to them to find so high a value attached to individuality, the question, one must nevertheless think, can only be one of degree. No one's idea of excellence in conduct is that people should do absolutely nothing but copy one another. No one would assert that people ought not to put into their mode of life, and into the conduct of their concerns, any impress whatever of their own judgment, or of their own individual character. On the other hand, it would be absurd to pretend that people ought to live as if nothing whatever had been known in the world before they came into it; as if experience had as yet done nothing towards showing that one mode of existence, or of conduct, is preferable to another. Nobody denies that people should be so taught and trained in youth as to know and benefit by the ascertained results of human experience. But it is the privilege and proper condition of a human being, arrived at the maturity of his faculties, to use and interpret experience in his own way. It is for him to find out what part of recorded experience is properly applicable to his own circumstances and character. The traditions and customs of other people are, to a certain extent, evidence of what their experience has taught them; presumptive evidence, and as such have a claim to his deference; but, in the first place, their experience may be too narrow; or they may not have interpreted it rightly. Secondly, their interpretation of experience may be correct, but unsuitable to him. Customs are made for customary circumstances and customary characters; and his circumstances or his character may be uncustomary. Thirdly, though the customs be both good as customs, and suitable to him, yet to conform to custom, merely as custom, does not educate or develop in him any of the qualities which are the distinctive endowment of a human being. The human faculties of perception, judgment, discriminative feeling, mental activity, and even moral preference, are exercised only in making a choice. He who does anything because it is the custom makes no choice. He gains no practice either in discerning or in desiring what is best. The mental and moral, like the muscular powers, are improved only by being used. The faculties are called into no exercise by doing a thing merely because others do it; no more than by believing a thing only because others believe it. If the grounds of an opinion are not conclusive to the person's own reason, his reason cannot be strengthened, but is likely to be weakened, by his adopting it and if the inducements to an act are not such as are consentaneous to his own feelings and character (where affection, or the rights of others, are not concerned) it is so much done towards rendering his feelings and character inert and torpid, instead of active and energetic.

He who lets the world, or his own portion of it, choose his plan of

life for him, has no need of any other faculty than the ape-like one of imitation. He who chooses his plan for himself, employs all his faculties. He must use observation to see, reasoning and judgment to foresee, activity to gather materials for decision, discrimination to decide, and when he has decided, firmness and self-control to hold to his deliberate decision. And these qualities he requires and exercises exactly in proportion as the part of his conduct which he determines according to his own judgment and feelings is a large one. It is possible that he might be guided in some good path, and kept out of harm's way, without any of these things. But what will be his comparative worth as a human being? It really is of importance, not only what men do, but also what manner of men they are that do it. Among the works of man, which human life is rightly employed in perfecting and beautifying, the first in importance surely is man himself. Supposing it were possible to get houses built, corn grown, battles fought, causes tried, and even churches erected and prayers said, by machinery—by automaton in human form—it would be a considerable loss to exchange for these automaton even the men and women who at present inhabit the more civilized parts of the world, and who assuredly are but starved specimens of what nature can and will produce. Human nature is not a machine to be built after a model, and set to do exactly the work prescribed for it, but a tree, which requires to grow and develop itself on all sides, according to the tendency of the inward forces which make it a living thing.

It will probably be conceded that it is desirable people should exercise their understandings, and that an intelligent following of custom, or even occasionally an intelligent deviation from custom, is better than a blind and simply mechanical adhesion to it. To a certain extent it is admitted that our understanding should be our own: but there is not the same willingness to admit that our desires and impulses should be our own likewise; or that to possess impulses of our own, and of any strength, is anything but a peril and a snare. Yet desires and impulses are as much a part of a perfect human being as beliefs and restraint: and strong impulses are only perilous when not properly balanced; when one set of aims and inclinations is developed into strength, while others, which ought to co-exist with them, remain weak and inactive. It is not because men's desires are strong that they act ill; it is because their consciences are weak. There is no natural connection between strong impulses and a weak conscience. The natural connection is the other way. To say that one person's desires and feelings are stronger and more various than those of another, is merely to say that he has more of the raw material of human nature, and is therefore capable, perhaps of more evil, but certainly of more good.

Strong impulses are but another name for energy. Energy may be turned to bad uses; but more good may always be made of an energetic nature, than of an indolent and impassive one. Those who have most natural feeling are always those whose cultivated feelings may be made the strongest. The same strong susceptibilities which make the personal impulses vivid and powerful, are also the source from whence are generated the most passionate love of virtue, and the sternest self-control. It is through the cultivation of these that society both does its duty and protects its interests: not by rejecting the stuff of which heroes are made, because it knows not how to make them. A person whose desires and impulses are his own—are the expression of his own nature, as it has been developed and modified by his own culture—is said to have a character. One whose desires and impulses are not his own, has no character, no more than a steam-engine has a character. If, in addition to being his own, his impulses are strong, and are under the government of a strong will, he has an energetic character. Whoever thinks that individuality of desires and impulses should not be encouraged to unfold itself, must maintain that society has no need of strong natures—is not the better for containing many persons who have much character—and that a high general average of energy is not desirable.

In some early states of society, these forces might be, and were, too much ahead of the power which society then possessed of disciplining and controlling them. There has been a time when the element of spontaneity and individuality was in excess, and the social principle had a hard struggle with it. The difficulty then was to induce men of strong bodies or minds to pay obedience to any rules which required them to control their impulses. To overcome this difficulty, law and discipline, like the Popes struggling against the Emperors, asserted a power over the whole man, claiming to control all his life in order to control his character—which society had not found any other sufficient means of binding. But society has now fairly got the better of individuality; and the danger which threatens human nature is not the excess, but the deficiency, of personal impulses and preferences. Things are vastly changed since the passions of those who were strong by station or by personal endowment were in a state of habitual rebellion against law and ordinances, and required to be rigorously chained up to enable the persons within their reach to enjoy any particle of security. In our times, from the highest class of society down to the lowest, every one lives as under the eye of a hostile and dreaded censorship. Not only in what concerns others, but in what concerns only themselves, the individual or the family do not ask themselves—what do I prefer? or, what would suit my character and disposition? or,

what would allow the best and highest in me to have fair play, and enable it to grow and thrive? They ask themselves, what is suitable to my position? what is usually done by persons of my station and pecuniary circumstances? or (worse still) what is usually done by persons of a station and circumstances superior to mine. I do not mean that they choose what is customary in preference to what suits their own inclination. It does not occur to them to have any inclination, except for what is customary. Thus the mind itself is bowed to the yoke: even in what people do for pleasure, conformity is the first thing thought of; they like in crowds; they exercise choice only among things commonly done: peculiarity of taste, eccentricity of conduct, are shunned equally with crimes: until by dint of not following their own nature they have no nature to follow: their human capacities are withered and starved: they become incapable of any strong wishes or native pleasures, and are generally without either opinions or feelings of home growth, or properly their own. Now is this, or is it not, the desirable condition of human nature?

It is so, on the Calvinistic theory. According to that, the one great offense of man is self-will. All the good of which humanity is capable is comprised in obedience. You have no choice; thus you must do, and no otherwise: "whatever is not a duty, is a sin." Human nature being radically corrupt, there is no redemption for any one until human nature is killed within him. To one holding this theory of life, crushing out any of the human faculties, capacities, and susceptibilities, is no evil: man needs no capacity, but that of surrendering himself to the will of God: and if he uses any of his faculties for any other purpose but to do that supposed will more effectually, he is better without them. This is the theory of Calvinism; and it is held, in a mitigated form, by many who do not consider themselves Calvinists; the mitigation consisting in giving a less ascetic interpretation to the alleged will of God; asserting it to be his will that mankind should gratify some of their inclinations; of course not in the manner they themselves prefer, but in the way of obedience, that is, in a way prescribed to them by authority; and, therefore, by the necessary condition of the case, the same for all.

In some such insidious form there is at present a strong tendency to this narrow theory of life, and to the pinched and hidebound type of human character which it patronizes. Many persons, no doubt, sincerely think that human beings thus cramped and dwarfed are as their Maker designed them to be; just as many have thought that trees are a much finer thing when clipped into pollards, or cut out into figures of animals, than as nature made them. But if it be any part of religion to believe that man was made by a good

Being, it is more consistent with that faith to believe that this Being gave all human faculties that they might be cultivated and unfolded, not rooted out and consumed, and that he takes delight in every nearer approach made by his creatures to the ideal conception embodied in them, every increase in any of their capabilities of comprehension, of action, or of enjoyment. There is a different type of human excellence from the Calvinistic: a conception of humanity as having its nature bestowed on it for other purposes than merely to be abnegated. "Pagan self-assertion" is one of the elements of human worth, as well as "Christian self-denial." There is a Greek ideal of self-development, which the Platonic and Christian ideal of self-government blends with, but does not supersede. It may be better to be a John Knox than an Alcibiades, but it is better to be a Pericles than either; nor would a Pericles, if we had one in these days, be without anything good which belonged to John Knox.

It is not by wearing down into uniformity all that is individual in themselves, but by cultivating it, and calling it forth, within the limits imposed by the rights and interests of others, that human beings become a noble and beautiful object of contemplation; and as the works partake the character of those who do them, by the same process human life also becomes rich, diversified, and animating, furnishing more abundant aliment to high thoughts and elevated feelings, and strengthening the tie which binds every individual to the race, by making the race infinitely better worth belonging to. In proportion to the development of his individuality, each person becomes more valuable to himself, and is therefore capable of being more valuable to others. There is a greater fulness of life about his own existence, and when there is more life in the units there is more in the mass which is composed of them. As much compression as is necessary to prevent the stronger specimens of human nature from encroaching on the rights of others cannot be dispensed with; but for this there is ample compensation even in the point of view of human development. The means of development which the individual loses by being prevented from gratifying his inclinations to the injury of others, are chiefly obtained at the expense of the development of other people. And even to himself there is a full equivalent in the better development of the social part of his nature, rendered possible by the restraint put upon the selfish part. To be held to rigid rules of justice for the sake of others, develops the feelings and capacities which have the good of others for their object. But to be restrained in things not affecting their good, by their mere displeasure, develops nothing valuable, except such force of character as may unfold itself in resisting the restraint. If acquiesced in, it dulls and blunts the whole nature. To give any fair play to the nature of each, it is essential

that different persons should be allowed to lead different lives. In proportion as this latitude has been exercised in any age, has that age been noteworthy to posterity. Even despotism does not produce its worst effects, so long as individuality exists under it; and whatever crushes individuality is despotism, by whatever name it may be called, and whether it professes to be enforcing the will of God or the injunctions of men.

Having said that the individuality is the same thing with development, and that it is only the cultivation of individuality which produces, or can produce, well-developed human beings, I might here close the argument: for what more or better can be said of any condition of human affairs than that it brings human beings themselves nearer to the best thing they can be? or what worse can be said of any obstruction to good than that it prevents this? Doubtless, however, these considerations will not suffice to convince those who most need convincing; and it is necessary further to show, that these developed human beings are of some use to the undeveloped—to point out to those who do not desire liberty, and would not avail themselves of it, that they may be in some intelligible manner rewarded for allowing other people to make use of it without hindrance.

In the first place, then, I would suggest that they might possibly learn something from them. It will not be denied by anybody, that originality is a valuable element in human affairs. There is always need of persons not only to discover new truths, and point out when what were once truths are true no longer, but also to commence new practices, and set the example of more enlightened conduct and better taste and sense in human life. This cannot well be gainsaid by anybody who does not believe that the world has already attained perfection in all its ways and practices. It is true that this benefit is not capable of being rendered by everybody alike: there are but few persons, in comparison with the whole of mankind, whose experiments, if adopted by others, would be likely to be any improvement on established practice. But these few are the salt of the earth; without them, human life would become a stagnant pool. Not only is it they who introduce good things which did not before exist; it is they who keep the life in those which already exist. If there were nothing new to be done, would human intellect cease to be necessary? Would it be a reason why those who do the old things should forget why they are done, and do them like cattle, not like human beings? There is only too great a tendency in the best beliefs and practices to degenerate into the mechanical; and unless there were a succession of persons whose ever-recurring originality prevents the grounds of those beliefs and practices from becoming merely traditional, such dead matter would

not resist the smallest shock from anything really alive, and there would be no reason why civilization should not die out, as in the Byzantine Empire. Persons of genius, it is true, are, and are always likely to be, a small minority; but in order to have them, it is necessary to preserve the soil in which they grow. Genius can only breathe freely in an atmosphere of freedom. Persons of genius are, *ex vi termini*, more individual than any other people—less capable, consequently, of fitting themselves, without hurtful compression, into any of the small number of moulds which society provides in order to save its members the trouble of forming their own character. If from timidity they consent to be forced into one of these moulds, and to let all that part of themselves which cannot expand under the pressure remain unexpanded, society will be little the better for their genius. If they are of a strong character, and break their fetters, they become a mark for the society which has not succeeded in reducing them to commonplace, to point out with solemn warning as “wild,” “erratic,” and the like; much as if one should complain of the Niagara river for not flowing smoothly between its banks like a Dutch canal.

I insist thus emphatically on the importance of genius, and the necessity of allowing it to unfold itself freely both in thought and in practice, being well aware that no one will deny the position in theory, but knowing also that almost every one, in reality, is totally indifferent to it. People think genius a fine thing if it enables a man to write an exciting poem, or paint a picture. But in its true sense, that of originality in thought and action, though no one says it is not a thing to be admired, nearly all, at heart, think that they can do very well without it. Unhappily this is too natural to be wondered at. Originality is the one thing which unoriginal minds cannot feel the use of. They cannot see what it is to do for them: how should they? If they could see what it would do for them, it would not be originality. The service which originality has to render them, is that of opening their eyes: which being once fully done, they would have a chance of being themselves original. Meanwhile, recollecting that nothing was ever yet done which some one was not the first to do, and that all good things which exist are the fruits of originality, let them be modest enough to believe that there is something still left for it to accomplish, and assure themselves that they are more in need of originality, the less they are conscious of the want.

In sober truth, whatever homage may be professed, or even paid, to real supposed mental superiority, the general tendency of things throughout the world is to render mediocrity the ascendant power among mankind. In ancient history, in the Middle Ages, and in a diminishing degree through the long transition from feudality to the

present time, the individual was a power in himself; and if he had either great talents or a high social position, he was a considerable power. At present individuals are lost in the crowd. In politics it is almost a triviality to say that public opinion now rules the world. The only power deserving the name is that of masses, and of governments while they make themselves the organ of the tendencies and instincts of masses. This is as true in the moral and social relations of private life as in public transactions. Those whose opinions go by the name of public opinion are not always the same sort of public: in America they are the whole white population; in England, chiefly the middle class. But they are always a mass, that is to say, collective mediocrity. And what is a still greater novelty, the mass do not now take their opinions from dignitaries in Church or State, from ostensible leaders, or from books. Their thinking is done for them by men much like themselves, addressing them or speaking in their name, on the spur of the moment, through the newspapers. I am not complaining of all this. I do not assert that anything better is compatible, as a general rule, with the present low state of the human mind. But that does not hinder the government of mediocrity from being mediocre government. No government by a democracy or a numerous aristocracy, either in its political acts or in the opinions, qualities, and tone of mind which it fosters, ever did or could rise above mediocrity, except in so far as the sovereign Many have let themselves be guided (which in their best times they always have done) by the counsels and influence of a more highly gifted and instructed One or Few. The initiation of all wise or noble things comes and must come from individuals; generally at first from some one individual. The honor and glory of the average man is that he is capable of following that initiative; that he can respond internally to wise and noble things, and be led to them with his eyes open. I am not countenancing the sort of "hero-worship" which applauds the strong man of genius for forcibly seizing on the government of the world and making it do his bidding in spite of itself. All he can claim is, freedom to point out the way. The power of compelling others into it is not only inconsistent with the freedom and development of all the rest, but corrupting to the strong man himself. It does seem, however, that when the opinions of masses of merely average men are everywhere become or becoming the dominant power, the counterpoise and corrective to that tendency would be the more and more pronounced individuality of those who stand on the higher eminences of thought. It is in these circumstances most especially, that exceptional individuals, instead of being deterred, should be encouraged in acting differently from the mass. In other times there was no advantage in their doing so, unless they acted not

only differently but better. In this age, the mere example of non-conformity, the mere refusal to bend the knee to custom, is itself a service. Precisely because the tyranny of opinion is such as to make eccentricity a reproach, it is desirable, in order to break through that tyranny, that people should be eccentric. Eccentricity has always abounded when and where strength of character has abounded; and the amount of eccentricity in a society has generally been proportional to the amount of genius, mental vigor, and moral courage it contained. That so few now dare to be eccentric marks the chief danger of the time.

I have said that it is important to give the freest scope possible to uncustomary things, in order that it may in time appear which of these are fit to be converted into customs. But independence of action, and disregard of custom, are not solely deserving of encouragement for the chance they afford that better modes of action, and customs more worthy of general adoption, may be struck out; nor is it only persons of decided mental superiority who have a just claim to carry on their lives in their own way. There is no reason that all human existence should be constructed on some one or some small numbers of patterns. If a person possesses any tolerable amount of common sense and experience, his own mode of laying out his existence is the best, not because it is the best in itself, but because it is his own mode. Human beings are not like sheep; and even sheep are not undistinguishably alike. A man cannot get a coat or a pair of boots to fit him unless they are either made to his measure, or he has a whole warehouseful to choose from: and is it easier to fit him with a life than with a coat, or are human beings more like one another in their whole physical and spiritual conformation than in the shape of their feet? If it were only that people have diversities of taste, that is reason enough for not attempting to shape them all after one model. But different persons also require different conditions for their spiritual development; and can no more exist healthily in the same moral, than all the variety of plants can in the same physical, atmosphere and climate. The same things which are helps to one person towards the cultivation of his higher nature are hindrances to another. The same mode of life is a healthy excitement to one, keeping all his faculties of action and enjoyment in their best order, while to another it is a distracting burthen, which suspends or crushes all internal life. Such are the differences among human beings in their sources of pleasure, their susceptibilities of pain, and the operation on them of different physical and moral agencies, that unless there is a corresponding diversity in their modes of life, they neither obtain their fair share of happiness, nor grow up to the mental, moral, and æsthetic stature of which their nature is capable. Why then should tolerance, as far

as the public sentiment is concerned, extend only to tastes and modes of life which extort acquiescence by the multitude of their adherents? Nowhere (except in some monastic institutions) is diversity of taste entirely unrecognized; a person may, without blame, either like or dislike rowing, or smoking, or music, or athletic exercises, or chess, or cards, or study because both those who like each of these things, and those who dislike them, are too numerous to be put down. But the man, and still more the woman, who can be accused either of doing "what nobody does," or of not doing "what everybody does," is the subject of as much depreciatory remark as if he or she had committed some grave moral delinquency. Persons require to possess a title, or some other badge of rank, or of the consideration of people of rank, to be able to indulge somewhat in the luxury of doing as they like without detriment to their estimation. To indulge somewhat, I repeat: for whoever allow themselves much of that indulgence, incur the risk of something worse than disparaging speeches—they are in peril of a commission *de lunatico*, and of having their property taken from them and given to their relations.*

There is one characteristic of the present direction of public opinion peculiarly calculated to make it intolerant of any marked demonstration of individuality. The general average of mankind are not only moderate in intellect, but also moderate in inclination: they have no tastes or wishes strong enough to incline them to do any-

*There is something both contemptible and frightful in the sort of evidence on which, of late years, any person can be judicially declared unfit for the management of his affairs; and after his death, his disposal of his property can be set aside, if there is enough of it to pay the expenses of litigation—which are charged on the property itself. All the minute details of his daily life are pried into, and whatever is found which, seen through the medium of the perceiving and describing faculties of the lowest of the low, bears an appearance unlike absolute commonplace, is laid before the jury as evidence of insanity, and often with success; the jurors being little, if at all, less vulgar and ignorant than the witnesses; while the judges, with that extraordinary want of knowledge of human nature and life which continually astonishes us in English lawyers, often help to mislead them. These trials speak volumes as to the state of feeling and opinion among the vulgar with regard to human liberty. So far from setting any value on individuality—so far from respecting the right of each individual to act, in things indifferent, as seems good to his own judgment and inclinations, judges and juries cannot even conceive that a person in a state of sanity can desire such freedom. In former days, when it was proposed to burn atheists, charitable people used to suggest putting them in a mad-house instead: it would be nothing surprising now-a-days were we to see this done, and the doers applauding themselves, because, instead of persecuting for religion, they had adopted so humane and Christian a mode of treating these unfortunates, not without a silent satisfaction at their having thereby obtained their deserts.

thing unusual, and they consequently do not understand those who have, and class all such with the wild and intemperate whom they are accustomed to look down upon. Now, in addition to this fact which is general, we have only to suppose that a strong movement has set in towards the improvement of morals, and it is evident what we have to expect. In these days such a movement has set in; much has actually been effected in the way of increased regularity of conduct and discouragement of excesses; and there is a philanthropic spirit abroad, for the exercise of which there is no more inviting field than the moral and prudential improvement of our fellow-creatures. These tendencies of the times cause the public to be more disposed than at most former periods to prescribe general rules of conduct, and endeavor to make every one conform to the approved standard. And that standard, express or tacit, is to desire nothing strongly. Its ideal of character is to be without any marked character; to maim by compression, like a Chinese lady's foot, every part of human nature which stands out prominently, and tends to make the person markedly dissimilar in outline to commonplace humanity.

As is usually the case with ideals which exclude one-half of what is desirable, the present standard of approbation produces only an inferior imitation of the other half. Instead of great energies guided by vigorous reason, and strong feelings strongly controlled by a conscientious will, its result is weak feelings and weak energies, which therefore can be kept in outward conformity to rule without any strength either of will or of reason. Already energetic characters on any large scale are becoming merely traditional. There is now scarcely any outlet for energy in this country except business. The energy expended in this may still be regarded as considerable. What little is left from that employment is expended on some hobby; which may be a useful, even a philanthropic hobby, but is always some one thing, and generally a thing of small dimensions. The greatness of England is now all collective; individually small, we only appear capable of anything great by our habit of combining; and with this our moral and religious philanthropists are perfectly contented. But it was men of another stamp than this that made England what it has been; and men of another stamp will be needed to prevent its decline.

The despotism of custom is everywhere the standing hindrance to human advancement, being in unceasing antagonism to that disposition to aim at something better than customary, which is called, according to circumstances, the spirit of liberty, or that of progress or improvement. The spirit of improvement is not always a spirit of liberty, for it may aim at forcing improvements on an unwilling people; and the spirit of liberty, in so far as it resists such at-

tempts, may ally itself locally and temporarily with the opponents of improvement; but the only unfailing and permanent source of improvement is liberty, since by it there are as many possible independent centers of improvement as there are individuals. The progressive principle, however, in either shape, whether as the love of liberty or of improvement, is antagonistic to the sway of Custom, involving at least emancipation from that yoke; and the contest between the two constitutes the chief interest of the history of mankind. The greater part of the world has, properly speaking, no history, because the despotism of Custom is complete. This is the case over the whole East. Custom is there, in all things, the final appeal; justice and right mean conformity to custom; the argument of custom no one, unless some tyrant intoxicated with power, thinks of resisting. And we see the result. Those nations must once have had originality; they did not start out of the ground populous, lettered, and versed in many of the arts of life; they made themselves all this, and were then the greatest and most powerful nations of the world. What are they now? The subjects of their pendants of tribes whose fathers wandered in the forests when had magnificent palaces and gorgeous temples, but over whom opinion exercised only a divided rule with liberty and progress. It appears, may be progressive for a certain length of time, then stop: when does it stop? When it ceases to possess its quality. If a similar change should befall the nations of the world it will not be in exactly the same shape: the despotism of Custom with which these nations are threatened is not precisely the same. It proscribes singularity, but it does not preclude originality provided all change together. We have discarded the fixed ideas of our forefathers; every one must still dress like other people, the fashion may change once or twice a year. We thus see that when there is a change, it shall be for change's sake, the lowest from any idea of beauty or convenience; for the same idea of beauty or convenience would not strike all the world at the same time and be simultaneously thrown aside by all at another moment, and we are progressive as well as changeable: we continually make new inventions in mechanical things, and keep them until they are superseded by better; we are eager for improvement in politics, education, even in morals, though in this last our idea of improvement chiefly consists in persuading or forcing other people to be as good as ourselves. It is not progress that we object to; on the contrary, we flatter ourselves that we are the most progressive people who ever lived. It is individuality that we war against: we should think we had done wonders if we had made ourselves all alike; forgetting that the unlikeness of one person to another is generally the first thing which draws the attention of the

to the imperfection of his own type, and the superiority of another, or the possibility, by combining the advantages of both, of producing something better than either. We have a warning example in China—a nation of much talent, and, in some respects, even wisdom, owing to the rare good fortune of having been provided at an early period with a particularly good set of customs, the work, in some measure, of men to whom even the most enlightened European must accord, under certain limitations, the title of sages and philosophers. They are remarkable, too, in the excellence of their apparatus for impressing, as far as possible, the best wisdom they possess upon every mind in the community, and securing that those who have appropriated most of it shall occupy the posts of honor and power. Surely the people who did this have discovered the secret of human progressiveness, and must have kept themselves steadily at the head of the movement of the world. On the contrary, they have become stationary—have remained so for thousands of years; and if they are ever to be farther improved, it must be by foreigners. They have succeeded beyond all hope in what English philanthropists are so industriously working at—in making a people all alike, all governing their thoughts and conduct by the same maxims and rules; and these are the fruits. The modern régime of public opinion is, in an unorganized form, what the Chinese educational and political systems are in an organized; and unless individuality shall be able successfully to assert itself against this yoke, Europe, notwithstanding its noble antecedents and its professed Christianity, will tend to become another China.

What is it that has hitherto preserved Europe from this lot? is it that has made the European family of nations an improving, incessant of a stationary portion of mankind? Not any superior excellence in them, which, when it exists, exists as the effect not as the cause; but their remarkable diversity of character and culture. Individuals, classes, nations, have been extremely unlike one another; they have struck out a great variety of paths, each leading to something valuable; and although at every period those who travelled in different paths have been intolerant of one another, and would have thought it an excellent thing if all the rest could have been compelled to travel his road, their attempts to thwart another's development have rarely had any permanent success, each has in time endured to receive the good which the others have offered. Europe is, in my judgment, wholly indebted to this plurality of paths for its progressive and many-sided development. It already begins to possess this benefit in a considerably less degree. It is decidedly advancing towards the Chinese ideal of making all people alike. M. de Tocqueville, in his last important work, remarks how much more the Frenchmen of the present day

resemble one another than did those even of the last generation. The same remark might be made of Englishmen in a far greater degree. In a passage already quoted from Wilhelm von Humboldt, he points out two things as necessary conditions of human development, because necessary to render people unlike one another; namely, freedom, and variety of situations. The second of these two conditions is in this country every day diminishing. The circumstances which surround different classes and individuals, and shape their characters, are daily becoming more assimilated. Formerly, different ranks, different neighborhoods, different trades and professions, lived in what might be called different worlds; at present to a great degree in the same. Comparatively speaking, they now read the same things, listen to the same things, see the same things, go to the same places, have their hopes and fears directed to the same objects, have the same rights and liberties, and the same means of asserting them. Great as are the differences of position which remain, they are nothing to those which have ceased. And the assimilation is still proceeding. All the political changes of the age promote it, since they all tend to raise the low and to lower the high. Every extension of education promotes it, because education brings people under common influences, and gives them access to the general stock of facts and sentiments. Improvement in the means of communication promotes it, by bringing the inhabitants of distant places into personal contact, and keeping up a rapid flow of changes of residence between one place and another. The increase of commerce and manufactures promotes it, by diffusing more widely the advantages of easy circumstances, and opening all objects of ambition, even the highest, to general competition, whereby the desire of rising becomes no longer the character of a particular class, but of all classes. A more powerful agency than even all these, in bringing about a general similarity among mankind, is the complete establishment, in this and other free countries, of the ascendancy of public opinion in the State. As the various social eminences which enabled persons entrenched on them to disregard the opinion of the multitude gradually become levelled; as the very idea of resisting the will of the public, when it is positively known that they have a will, disappears more and more from the minds of practical politicians; there ceases to be any social support for nonconformity—any substantive power in society which, itself opposed to the ascendancy of numbers, is interested in taking under its protection opinions and tendencies at variance with those of the public.

The combination of all these causes forms so great a mass of influences hostile to Individuality, that it is not easy to see how it can stand its ground. It will do so with increasing difficulty, unless the intelligent part of the public can be made to feel its value—to

see that it is good there should be differences, even though not for the better, even though, as it may appear to them, some should be for the worse. If the claims of Individuality are ever to be asserted, the time is now, while much is still wanting to complete the enforced assimilation. It is only in the earlier stages that any stand can be successfully made against the encroachment. The demand that all other people shall resemble ourselves grows by what it feeds on. If resistance waits till life is reduced nearly to one uniform type, all deviations from that type will come to be considered impious, immoral, even monstrous and contrary to nature. Mankind speedily become unable to conceive diversity, when they have been for some time unaccustomed to see it.

SPENCER'S ESSAYS

(Herbert Spencer, English philosopher, was born in 1820. His first studies were principally on social and political questions. From 1845 to 1853 he was sub-editor of "Economist". His philosophy is based on evolution. The originality of his writings is the outstanding feature of his works. His work, "Principal of Ethics", written in 1892 is probably the best known. He died in 1903.)

PART I—ON EDUCATION

WHAT KNOWLEDGE IS OF MOST WORTH?

It has been truly remarked that, in order of time, decoration precedes dress. Among people who submit to great physical suffering that they may have themselves handsomely tattooed, extremes of temperatures are borne with but little attempt at mitigation. Humboldt tells us that an Orinoco Indian, though quite regardless of bodily comfort, will yet labour for a fortnight to purchase pigment wherewith to make himself admired; and that the same woman who would not hesitate to leave her hut without a fragment of clothing on, would not dare to commit such a breach of decorum as to go out unpainted. Voyagers find that colored beads and trinkets are much more prized by wild tribes than are calicoes or broadcloths. And the anecdotes we have of the ways in which, when shirts and coats are given, savages turn them to some ludicrous display, show how completely the idea of ornament predominates over that of use. Nay, there are still more extreme illustrations: witness the fact narrated by Capt. Speke of his African attendants, who strutted about in their goat-skin mantles when the weather was fine, but when it was wet, took them off, folded them up, and went about naked, shivering in the rain! Indeed, the facts of aboriginal life seem to indicate that dress is developed out of decorations. And when we remember that even among ourselves most think more about the fineness of the fabric than its warmth, and more about the cut than the convenience—when we see that the function is still in great measure subordinated to the appearance—we have further reason for inferring such an origin.

It is curious that the like relations hold with the mind. Among mental as among bodily acquisitions, the ornamental comes before the useful. Not only in times past, but almost as much in our era,

that knowledge which conduces to personal well-being has been postponed to that which brings applause. In the Greek schools, music, poetry, rhetoric, and a philosophy which, until Socrates taught, had but little bearing upon action, were the dominant subjects; while knowledge aiding the arts of life had a very subordinate place. And in our own universities and schools at the present moment, the like antithesis holds. We are guilty of something like a platitude when we say that throughout his after-career, a boy, in nine cases out of ten, applies his Latin and Greek to no practical purposes. The remark is trite that in his shop, or his office, in managing his estate or his family, in playing his part as director of a bank or a railway, he is very little aided by this knowledge he took so many years to acquire—so little, that generally the greater part of it drops out of his memory; and if he occasionally vents a Latin quotation, or alludes to some Greek myth, it is less to throw light on the topic in hand than for the sake of effect. If we inquire what is the real motive for giving boys a classical education, we find it to be simply conformity to public opinion. Men dress their children's minds as they do their bodies, in the prevailing fashion. As the Orinoco Indian puts on paint before leaving his hut, not with a view to any direct benefit, but because he would be ashamed to be seen without it; so, a boy's drilling in Latin and Greek is insisted on, not because of their intrinsic value, but that he may not be disgraced by being found ignorant of them—that he may have "the education of a gentleman"—the badge marking a certain social position, and bringing a consequent respect.

This parallel is still more clearly displayed in the case of the other sex. In the treatment of both mind and body, the decorative element has continued to predominate in a greater degree among women than among men. Originally, personal adornment occupied the attention of both sexes equally. In these latter days of civilisation, however, we see that in the dress of men the regard for appearance has in a considerable degree yielded to the regard for comfort; while in their education the useful has of late been trenching on the ornamental. In neither direction has this change gone so far with women. The wearing of earrings, finger-rings, bracelets; the elaborate dressings of the hair; the still occasional use of paint; the immense labour bestowed in making habiliments sufficiently attractive; and the great discomfort that will be submitted to for the sake of conformity; show how greatly, in the attiring of women, the desire of approbation overrides the desire for warmth and convenience. And similarly in their education, the immense preponderance of "accomplishments" proves how here, too, use is subordinated to display. Dancing, deportment, the piano, singing, drawing—what a large space do these occupy! If you ask why Italian and German are learnt, you will find that, under

all the sham reasons given, the real reason is, that a knowledge of those tongues is thought ladylike. It is not that the books written in them may be utilised, which they scarcely ever are; but that Italian and German songs may be sung, and the extent of attainment may bring whispered admiration. The births, deaths, and marriages of kings, and other like historic trivialities, are committed to memory, not because of any direct benefits that can possibly result from knowing them: but because society considers them parts of a good education—because the absence of such knowledge may bring the contempt of others. When we have named reading, writing, spelling, grammar, arithmetic, and sewing, we have named about all the things a girl is taught with a view to their actual uses in life; and even some of these have more reference to the good opinion of others than to immediate personal welfare.

Thoroughly to realise the truth that with the mind as with the body the ornamental precedes the useful, it is requisite to glance at its rationale. This lies in the fact that, from the far past down even to the present, social needs have subordinated individual needs, and that the chief social need has been the control of individuals. It is not, as we commonly suppose, that there are no governments but those of monarchs, and parliaments, and constituted authorities. These acknowledged governments are supplemented by other unacknowledged ones, that grow up in all circles, in which every man or woman strives to be king or queen or lesser dignity. To get above some and be revered by them, and to propitiate those who are above us, is the universal struggle in which the chief energies of life are expended. By the accumulation of wealth, by style of living, by beauty of dress, by display of knowledge or intellect, each tries to subjugate others; and so aids in weaving that ramified network of restraints by which society is kept in order. It is not the savage chief only, who, in formidable war-paint, with scalps at his belt, aims to strike awe into his inferiors; it is not only the belle who, by elaborate toilet, polished manners, and numerous accomplishments, strives to "make conquests;" but the scholar, the historian, the philosopher, use their acquirements to the same end. We are none of us content with quietly unfolding our own individualities to the full in all directions; but have a restless craving to impress our individualities upon others, and in some way subordinate them. And this it is which determines the character of our education. Not what knowledge is of most real worth, is the consideration; but what will bring most applause, honour, respect—what will most conduce to social position and influence—what will be most imposing. As, throughout life, not what we are, but what we shall be thought, is the question; so in education, the question is, not the intrinsic value of knowledge, so much as its extrinsic effects on others. And this being our dominant idea, direct

utility is scarcely more regarded than by the barbarian when filing his teeth and staining his nails.

If there requires further evidence of the rude, undeveloped character of our education, we have it in the fact that the comparative worths of different kinds of knowledge have been as yet scarcely even discussed—much less discussed in a methodic way with definite results. Not only is it that no standard of relative value has yet been agreed upon; but the existence of any such standard has not been conceived in a clear manner. And not only is it that the existence of such a standard has not been clearly conceived; but the need for it seems to have been scarcely even felt. Men read books on this topic, and attend lectures on that; decide that their children shall be instructed in these branches of knowledge, and shall not be instructed in those; and all under the guidance of mere custom, or liking, or prejudice; without ever considering the enormous importance of determining in what rational way what things are really most worth learning. It is true that in all circles we hear occasional remarks on the importance of this or the other order of information. But whether the degree of its importance justifies the expenditure of the time needed to acquire it; and whether there are not things of more importance to which such time might be better devoted; are queries which, if raised at all, are disposed of quite summarily, according to personal predilections. It is true also, that now and then, we hear revived the standing controversy respecting the comparative merits of classics and mathematics. This controversy, however, is carried on in an empirical manner, with no reference to an ascertained criterion; and the question at issue is insignificant when compared with the general question of which it is part. To suppose that deciding whether a mathematical or a classical education is the best, is deciding what is the proper curriculum, is much the same thing as to suppose that the whole of dietetics lies in ascertaining whether or not bread is more nutritive than potatoes!

The question which we contend is of such transcendent moment, is, not whether such or such knowledge is of worth, but what is its relative worth? When they have named certain advantages which a given course of study has secured them, persons are apt to assume that they have justified themselves: quite forgetting that the adequateness of the advantages is the point to be judged. There is, perhaps, not a subject to which men devote attention that has not some value. A year diligently spent in getting up heraldry, would very possibly give a little further insight into ancient manners and morals. Any one who should learn the distances between all the towns in England, might, in the course of his life, find one or two of the thousand facts he has acquired of some slight service when arranging a journey. Gathering together all the small gossip of a

county, profitless occupation as it would be, might yet occasionally help to establish some useful fact—say, a good example of hereditary transmission. But in these cases, every one would admit that there was no proportion between the required labour and the probable benefit. No one would tolerate the proposal to devote some years of a boy's time to getting such information, at the cost of much more valuable information which he might else have got. And if here the test of relative value is appealed to and held conclusive, then should it be appealed to and held conclusive throughout. Had we time to master all subjects we need not be particular. To quote the old song:—

Could a man be secure
That his day would endure
As of old, for a thousand long years,
What things might he know!
What deeds might he do!
And all without hurry or care.

"But we that have but span-long lives" must ever bear in mind our limited time for acquisition. And remembering how narrowly this time is limited, not only by the shortness of life, but also still more by the business of life, we ought to be especially solicitous to employ what time we have to the greatest advantage. Before devoting years to some subject which fashion or fancy suggests, it is surely wise to weigh with great care the worth of the results, as compared with the worth of various alternative results which the same years might bring if otherwise applied.

In education, then, this is the question of questions, which it is high time we discussed in some methodic way. The first in importance, though the last to be considered, is the problem—how to decide among the conflicting claims of various subjects on our attention. Before there can be a rational curriculum, we must settle which things it most concerns us to know; or, to use a word of Bacon's now unfortunately obsolete—we must determine the relative values of knowledges.

To this end, a measure of value is the first requisite. And happily, respecting the true measure of value, as expressed in general terms, there can be no dispute. Every one in contending for the worth of any particular order of information, does so by showing its bearing upon some part of life. In reply to the question—"Of what use is it?" the mathematician, linguist, naturalist, or philosopher, explains the way in which his learning beneficially influences action—saves from evil or secures good—conduces to happiness. When the teacher of writing has pointed out how great an aid writing is to success in

business—that is, to the obtainment of sustenance—that is, to satisfactory living; he is held to have proved his case. And when the collector of dead facts (say a numismatist) fails to make clear any appreciable effects which these facts can produce on human welfare, he is obliged to admit that they are comparatively valueless. All then, either directly or by implication, appeal to this as the ultimate test.

How to live?—that is the essential question for us. Not how to live in the mere material sense only, but in the widest sense. The general problem which comprehends every special problem is—the right ruling of conduct in all directions under all circumstances. In what way to treat the body; in what way to treat the mind; in what way to manage our affairs; in what way to bring up a family; in what way to behave as a citizen; in what way to utilise those sources of happiness which nature supplies—how to use all our faculties to the greatest advantage of ourselves and others—how to live completely? And this being the great thing needful for us to learn, is, by consequence, the great thing which education has to teach. To prepare us for complete living is the function which education has to discharge; and the only rational mode of judging of an educational course is, to judge in what degree it discharges such function.

This test, never used in its entirety, but rarely even partially used, and used then in a vague, half conscious way, has to be applied consciously, methodically, and throughout all cases. It behooves us to set before ourselves, and ever to keep clearly in view, complete living as the end to be achieved; so that in bringing up our children we may choose subjects and methods of instruction, with deliberate reference to this end. Not only ought we to cease from the mere unthinking adoption of the current fashion in education, which has no better warrant than any other fashion; but we must also rise above that rude, empirical style of judging displayed by those more intelligent people who do bestow some care in overseeing the cultivation of their children's minds. It must not suffice simply to think that such or such information will be useful in after life, or that this kind of knowledge is of more practical value than that; but we must seek out some process of estimating their respective values, so that as far as possible we may positively know which are most deserving of attention.

Doubtless the task is difficult—perhaps never to be more than approximately achieved. But, considering the vastness of the interests at stake, its difficulty is no reason for pusillanimously passing it by; but rather for devoting every energy to its mastery. And if we only proceed systematically, we may very soon get at results of no small moment.

Our first step must obviously be to classify, in the order of their importance, the leading kinds of activity which constitute human life.

They may be naturally arranged into:—1. those activities which directly minister to self-preservation; 2. those activities which, by securing the necessities of life, indirectly minister to self-preservation; 3. those activities which have for their end the rearing and discipline of offspring; 4. those activities which are involved in the maintenance of proper social and political relations; 5. those miscellaneous activities which fill up the leisure part of life, devoted to the gratification of the tastes and feelings.

That these stand in something like their true order of subordination, it needs no long consideration to show. The actions and precautions by which, from moment to moment, we secure personal safety, must clearly take precedence of all others. Could there be a man, ignorant as an infant of surrounding objects and movements, or how to guide himself among them, he would pretty certainly lose his life the first time he went into the street; notwithstanding any amount of learning he might have on other matters. And as entire ignorance in all other directions would be less promptly fatal than entire ignorance in this direction, it must be admitted that knowledge immediately conducive to self-preservation is of primary importance.

That next after direct self-preservation comes the indirect self-preservation which consists in acquiring the means of living, none will question. That a man's industrial functions must be considered before his parental ones, is manifest from the fact that, speaking generally, the discharge of the parental functions is made possible only by the previous discharge of the industrial ones. The power of self-maintenance necessarily preceding the power of maintaining offspring, it follows that knowledge needful for self-maintenance has stronger claims than knowledge needful for family welfare—is second in value to none save knowledge needful for immediate self-preservation.

As the family comes before the State in order of time—as the bringing up of children is possible before the State exists, or when it has ceased to be, whereas the State is rendered possible only by the bringing up of children; it follows that the duties of the parent demand closer attention than those of the citizen. Or, to use a further argument—since the goodness of a society ultimately depends on the nature of its citizens; and since the nature of its citizens is more modifiable by early training than by anything else; we must conclude that the welfare of the family underlies the welfare of society. And hence knowledge directly conducing to the first, must take precedence of knowledge directly conducing to the last.

Those various forms of pleasurable occupation which fill up the leisure left by graver occupation—the enjoyment of music, poetry, painting, etc.—manifestly imply a pre-existing society. Not only is a considerable development of them impossible without a long-established social union; but their very subject-matter consists in great

part of social sentiments and sympathies. Not only does society supply the conditions to their growth; but also the ideas and sentiments they express. And, consequently, that part of human conduct which constitutes good citizenship, is of more moment than that which goes out in accomplishments or exercises of the tastes; and in education, preparation for the one must rank before preparation for the other.

Such then, we repeat, is something like the rational order of subordination:—That education which prepares for direct self-preservation; that which prepares for indirect self-preservation; that which prepares for parenthood; that which prepares for citizenship; that which prepares for the miscellaneous refinements of life. We do not mean to say that these divisions are definitely separable. We do not deny that they are intricately entangled with each other, in such way that there can be no training for any that is not in some measure a training for all. Nor do we question that of each division there are portions more important than certain portions of the preceding divisions: that, for instance, a man of much skill in business but little other faculty, may fall further below the standard of complete living than one of but moderate ability in money-getting but great judgment as a parent; or that exhaustive information bearing on right social action, joined with entire want of general culture in literature and the fine arts, is less desirable than a more moderate share of the one joined with some of the other. But, after making due qualifications there still remain these broadly-marked divisions; and it still continues substantially true that these divisions subordinate one another in the foregoing order, because the corresponding divisions of life make one another possible in that order.

Of course the ideal of education is—complete preparation in all these divisions. But failing this ideal, as in our phase of civilization every one must do more or less, the aim should be to maintain a due proportion between the degrees of preparation in each. Not exhaustive cultivation in any one, supremely important though it may be—not even an exclusive attention to the two, three, or four divisions of greatest importance; but an attention to all:—greatest where the value is greatest; less where the value is less; least where the value is least. For the average man (not to forget the cases in which peculiar aptitude for some one department of knowledge, rightly makes pursuit of that one the bread-winning occupation)—for the average man, we say, the desideratum is, a training that approaches nearest to perfection in the things which most subserve complete living, and falls more and more below perfection in the things that have more and more remote bearings on complete living.

In regulating education by this standard, there are some general considerations that should be ever present to us. The worth of any

kind of culture, as aiding complete living, may be either necessary or more or less contingent. There is knowledge of intrinsic value; knowledge of quasi-intrinsic value; and knowledge of conventional value. Such facts as that sensations of numbness and tingling commonly precede paralysis, that the resistance of water to a body moving through it varies as the square of the velocity, that chlorine is a disinfectant,—these, and the truths of Science in general, are of intrinsic value; they will bear on human conduct ten thousand years hence as they do now. The extra knowledge of our own language, which is given by an acquaintance with Latin and Greek, may be considered to have a value that is quasi-intrinsic: it must exist for us and for other races whose languages owe much to these sources; but will last only as long as our languages last. While that kind of information which, in our schools, usurps the name History—the mere tissue of names and dates and dead unmeaning events—has a conventional value only: it has not the remotest bearing on any of our actions; and is of use only for the avoidance of those unpleasant criticisms which current opinion passes upon its absence. Of course, as those facts which concern all mankind throughout all time must be held of greater moment than those which concern only a portion of them during a limited era, and of far greater moment than those which concern only a portion of them during the continuance of a fashion; it follows that in a rational estimate, knowledge of intrinsic worth must, other things equal, take precedence of knowledge that is of quasi-intrinsic or conventional worth.

One further preliminary. Acquirement of every kind has two values—value as knowledge and value as discipline. Besides its use for guiding conduct, the acquisition of each order of facts has also its use as mental exercise; and its effects as a preparative for complete living have to be considered under both these heads.

These, then, are the general ideas with which we must set out in discussing a curriculum:—Life as divided into several kinds of activity of successively decreasing importance; the worth of each order of facts as regulating these several kinds of activity, intrinsically, quasi-intrinsically, and conventionally; and their regulative influences estimated both as knowledge and discipline.

Happily, that all-important part of education which goes to secure direct self-preservation, is in great part already provided for. Too momentous to be left to our blundering, Nature takes it into her own hands. While yet in its nurse's arms, the infant, by hiding its face and crying at the sight of a stranger, shows the dawning instinct to attain safety by flying from that which is unknown and may be dangerous; and when it can walk, the terror it manifests if an unfamiliar dog comes near, or the screams with which it runs to its mother after any startling sight or sound, shows this instinct further developed.

Moreover, knowledge subserving direct self-preservation is that which it is chiefly busied in acquiring from hour to hour. How to balance its body; how to control its movements so as to avoid collisions; what objects are hard, and will hurt if struck; what objects are heavy, and injure if they fall on the limbs; which things will bear the weight of the body, and which not; the pains inflicted by fire, by missiles, by sharp instruments—these, and various other pieces of information needful for the avoidance of death or accident, it is ever learning. And when, a few years later, the energies go out in running, climbing, and jumping, in games of strength and games of skill, we see in all these actions by which the muscles are developed, the perceptions sharpened, and the judgment quickened, a preparation for the safe conduct of the body among surrounding objects and movements; and for meeting those greater dangers that occasionally occur in the lives of all. Being thus, as we say, so well cared for by Nature, this fundamental education needs comparatively little care from us. What we are chiefly called upon to see, is, that there shall be free scope for gaining this experience and receiving this discipline—that there shall be no such thwarting of Nature as that by which stupid schoolmistresses commonly prevent the girls in their charge from the spontaneous physical activities they would indulge in; and so render them comparatively incapable of taking care of themselves in circumstances of peril.

This, however, is by no means all that is comprehended in the education that prepares for direct self-preservation. Besides guarding the body against mechanical damage or destruction, it has to be guarded against injury from other causes—against the disease and death that follow breaches of physiologic law. For complete living it is necessary, not only that sudden annihilations of life shall be warded off; but also that there shall be escaped the incapacities and the slow annihilation which unwise habits entail. As, without health and energy, the industrial, the parental, the social, and all other activities become more or less impossible; it is clear that this secondary kind of direct self-preservation is only less important than the primary kind; and that knowledge tending to secure it should rank very high.

It is true that here, too, guidance is in some measure ready supplied. By our various physical sensations and desires, Nature has insured a tolerable conformity to the chief requirements. Fortunately for us, want of food, great heat, extreme cold, produce promptings too peremptory to be disregarded. And would men habitually obey these and all like promptings when less strong, comparatively few evils would arise. If fatigue of body or brain were in every case followed by desistance; if the oppression produced by a close atmosphere always led to ventilation; if there were no eating without hunger, or drinking

without thirst; then would the system be but seldom out of working order. But so profound an ignorance is there of the laws of life, that men do not even know that their sensations are their natural guides, and (when not rendered morbid by long-continued disobedience) their trustworthy guides. So that though, to speak teleologically, Nature has provided efficient safeguards to health, lack of knowledge makes them in a measure useless.

If any one doubts the importance of an acquaintance with the principles of philosophy, as a means to complete living, let him look around and see how many men and women he can find in middle or later life who are thoroughly well. Only occasionally do we meet with an example of vigorous health continued to old age; hourly do we meet with examples of acute disorder, chronic ailment, general debility, premature decrepitude. Scarcely is there one to whom you put the question, who has not, in the course of his life, brought upon himself illnesses which a little information would have saved him from. Here is a case of heart-disease consequent on a rheumatic fever that followed reckless exposure. There is a case of eyes spoiled for life by over-study. Yesterday the account was of one whose long-enduring lameness was brought on by continuing, spite of the pain, to use a knee after it had been slightly injured. And to-day we are told of another who has had to lie by for years, because he did not know that the palpitation he suffered under resulted from overtaxed brain. Now we hear of an irremediable injury which followed some silly feat of strength; and, again, of a constitution that has never recovered from the effects of excessive work needlessly undertaken. While on every side we see the perpetual minor ailments which accompany feebleness. Not to dwell on the pain, the weariness, the gloom, the waste of time and money thus entailed, only consider how greatly ill-health hinders the discharge of all duties—makes business often impossible, and always more difficult; produces an irritability fatal to the right management of children; puts the functions of citizenship out of the question; and makes amusement a bore. Is it not clear that the physical sins—partly our forefathers' and partly our own—which produce this ill-health, deduct more from complete living than anything else? and to a great extent make life a failure and a burden instead of a benefaction and a pleasure?

Nor is this all. Life, besides being thus immensely deteriorated, is also cut short. It is not true, as we commonly suppose, that after a disorder or disease from which we have recovered, we are as before. No disturbance of the normal course of the functions can pass away and leave things exactly as they were. A permanent damage is done—not immediately appreciable, it may be, but still there; and along with other such items which Nature in her strict account-

keeping never drops, it will tell against us to the inevitable shortening of our days. Through the accumulation of small injuries it is that constitutions are commonly undermined, and break down, long before their time. And if we call to mind how far the average duration of life falls below the possible duration, we see how immense is the loss. When, to the numerous partial deductions which bad health entails, we add this great final deduction, it results that ordinarily one-half of life is thrown away.

Hence, knowledge which subserves direct self-preservation by preventing this loss of health, is of primary importance. We do not contend that possession of such knowledge would by any means wholly remedy the evil. It is clear that in our present phase of civilisation, men's necessities often compel them to transgress. And it is further clear that, even in the absence of such compulsion, their inclinations would frequently lead them, spite of their convictions, to sacrifice future good to present gratification. But we do contend that the right knowledge impressed in the right way would effect much; and we further contend that as the laws of health must be recognised before they can be fully conformed to, the imparting of such knowledge must precede a more rational living—come when that may. We infer that as vigorous health and its accompanying high spirits are larger elements of happiness than any other things what ever, the teaching how to maintain them is a teaching that yields in moment to no other whatever. And therefore we assert that such a course of physiology as is needful for the comprehension of its general truths, and their bearings on daily conduct, is an all-essential part of a rational education.

strange that the assertion should need making! Stranger still that it should need defending! Yet are there not a few by whom such a proposition will be received with something approaching to derision. Men who would blush if caught saying Iphigénia instead of Iphigenia, or would resent as an insult any imputation of ignorance respecting the fabled labours of a fabled demi-god, show not the slightest shame in confessing that they do not know where the Eustachian tubes are, what are the actions of the spinal cord, what is the normal rate of pulsation, or how the lungs are inflated. While anxious that their sons should be well up in the superstitions of two thousand years ago, they care not that they should be taught anything about the structure and functions of their own bodies—nay, even wish them not to be so taught. So overwhelming is the influence of established routine! So terribly in our education does the ornamental over-ride the useful!

We need not insist on the value of that knowledge which aids

indirect self-preservation by facilitating the gaining of a livelihood. This is admitted by all; and, indeed, by the mass is perhaps too exclusively regarded as the end of education. But while every one is ready to endorse the abstract proposition that instruction fitting youths for the business of life is of high importance, or even to consider it of supreme importance; yet scarcely any inquire what instruction will so fit them. It is true that reading, writing and arithmetic are taught with an intelligent appreciation of their uses. But when we have said this we have said nearly all. While the great bulk of what else is acquired has no bearing on the industrial activities, an immensity of information that has a direct bearing on the industrial activities is entirely passed over.

For, leaving out only some very small classes, what are all men employed in? They are employed in the production, preparation, and distribution of commodities. And on what does efficiency in the production, preparation, and distribution of commodities depend? It depends on the use of methods fitted to the respective natures of these commodities; it depends on an adequate acquaintance with their physical, chemical, or vital properties, as the case may be; that is, it depends on Science. This order of knowledge which is in great part ignored in our school-courses, is the order of knowledge underlying the right performance of those processes by which civilised life is made possible. Undeniable as is this truth, there seems to be no living consciousness of it: its very familiarity makes it unregarded. To give due weight to our argument, we must, therefore, realise this truth to the reader by a rapid review of the facts.

Passing over the most abstract science, Logic, on the due guidance by which, however, the large producer or distributor depends, knowingly or unknowingly, for success in his business-forecasts, we come first to Mathematics. Of this, the most general division, dealing with number, guides all industrial activities; be they those by which processes are adjusted, or estimates framed, or commodities bought and sold, or accounts kept. No one needs to have the value of this division of abstract science insisted upon.

For the higher arts of construction, some acquaintance with the more special division of Mathematics is indispensable. The village carpenter, who lays out his work by empirical rules, equally with the builder of a Britannia Bridge, makes hourly reference to the laws of space-relations. The surveyor who measures the land purchased; the architect in designing a mansion to be built on it; the builder when laying out the foundations; the masons in cutting the stones; and the various artizans who put up the fittings; are all guided by geometrical truths. Railway-making is regulated from beginning to end by geometry: alike in the preparation of plans and sections; in staking out the line; in the mensuration of cuttings and embank-

ments; in the designing and building of bridges, culverts, viaducts, tunnels, stations. Similarly with the harbours, docks, piers, and various engineering and architectural works that fringe the coasts and overspread the country, as well as the mines that run underneath it. And now-a-days, even the farmer, for the correct laying-out of his drains, has recourse to the level—that is, to geometrical principles.

Turn next to the Abstract-Concrete sciences. On the application of the simplest of these, Mechanics, depends the success of modern manufacturers. The properties of the lever, the wheel-and-axle, etc., are recognised in every machine, and to machinery in these times we owe all production. Trace the history of the breakfast-roll. The soil out of which it came was drained with machine-made tiles; the surface was turned over by a machine; the wheat was reaped, thrashed, and winnowed by machines; by machinery it was ground and bolted; and had the flour been sent to Gosport, it might have been made into biscuits by a machine. Look round the room in which you sit. If modern, probably the bricks in its walls were machine-made; and by machinery the flooring was sawn and planed, the mantel-shelf sawn and polished, the paper-hangings made and printed. The veneer on the table, the turned legs of the chairs, the carpet, the curtains, are all products of machinery. Your clothing—plain, figured, or printed—is it not wholly woven, nay, perhaps even sewed, by machinery? And the volume you are reading—are not its leaves fabricated by one machine and covered with these words by another? Add to which that for the means of distribution over both land and sea, we are similarly indebted. And then observe that according as knowledge of mechanics is well or ill applied to these ends, comes success or failure. The engineer who miscalculates the strength of materials, builds a bridge that breaks down. The manufacturer who uses a bad machine cannot compete with another whose machine wastes less in friction and inertia. The ship-builder adhering to the old model is out-sailed by one who builds on the mechanically-justified wave-line principle. And as the ability of a nation to hold its own against other nations, depends on the skilled activity of its units, we see that on mechanical knowledge may turn the national fate.

On ascending from the divisions of Abstract-Concrete science dealing with molar forces, to those divisions of it which deal with molecular forces, we come to another vast series of applications. To this group of sciences joined with the preceding groups we owe the steam-engine, which does the work of millions of labourers. That section of physics which formulates the laws of heat, has taught us how to economise fuel in various industries; how to increase the produce of smelting furnaces by substituting the hot for the cold blast; how to ventilate mines; how to prevent explosions by using the safety lamp; and, through the thermometer, how to regulate innumerable processes.

That section which has the phenomena of light for its subject, gives eyes to the old and the myopic; aid through the microscope in detecting diseases and adulterations; and, by improved lighthouses, prevents shipwrecks. Researches in electricity and magnetism have saved innumerable lives and incalculable property through the compass; have subserved many arts by the electrotype; and now, in the telegraph, have supplied us with an agency by which for the future, mercantile transaction will be regulated and political intercourse carried on. While in the details of in-door life, from the improved kitchen-range up to the stereoscope on the drawing-room table, the applications of advanced physics underlie our comforts and gratifications.

Still more numerous are the applications of Chemistry. The bleacher, the dyer, the calico-printer, are severally occupied in processes that are well or ill done according as they do or do not conform to chemical laws. Smelting of copper, tin, zinc, lead, silver, iron, must be guided by chemistry. Sugar-refining, gas making, soap-boiling, gunpowder-manufacture, are operation all partly chemical; as are likewise those which produce glass and porcelain. Whether the distiller's wort stops at the alcoholic fermentation or passes into the acetous, is a chemical question on which hangs his profit or loss; and the brewer, if his business is extensive, finds it pay to keep a chemist on his premises. Indeed, there is now scarcely any manufacture over some part of which chemistry does not preside. Nay, in these times even agriculture, to be profitably carried on, must have like guidance. The analysis of manures and soils; the disclosure of their respective adaptations; the use of gypsum or other substance for fixing-ammonia; the utilisation of corrolites; the production of artificial manures—all these are boons of chemistry which it behooves the farmer to acquaint himself with. Be it in the lucifer match, or in disinfected sewage, or in photographs—in bread without fermentation, or perfumes extracted from refuse, we may perceive that chemistry affects all our industries; and that, therefore, knowledge of it concerns every one who is directly or indirectly connected with our industries.

Of the Concrete sciences, we come first to Astronomy. Out of this has grown that art of navigation which has made possible the enormous foreign commerce that supports a large part of our population, while supplying us with many necessities and most of our luxuries.

Geology, again, is a science knowledge of which greatly aids industrial success. Now that iron ores are so large a source of wealth; now that the duration of our coal-supply has become a question of great interest; now that we have a College of Mines and a Geological Survey; it is scarcely needful to enlarge on the truth that the study of the Earth's crust is important to our material welfare.

And then the science of life—Biology: does not this, too, bear fundamentally on these processes of indirect self-preservation?

With what we ordinarily call manufacturers, it has, indeed, little connection; but with the all-essentials manufactured—that of food—it is inseparably connected. As agriculture must conform its methods to the phenomena of vegetal and animal life, it follows that the science of these phenomena is the rational basis of agriculture. Various biological truths have indeed been empirically established and acted upon by farmers, while yet there has been no conception of them as science; such as that particular manures are suited to particular plants; that crops of certain kinds unfit the soil for other crops; that horses cannot do good work on poor food; that such and such diseases of cattle and sheep are caused by such and such conditions. These, and the every-day knowledge which the agriculturist gains by experience respecting the management of plant and animals, constitute his stock of biological facts; on the largeness of which greatly depends his success. And as these biological facts, scanty, indefinite, rudimentary, though they are, aid him so essentially; judge what must be the value to him of such facts when they become positive, preventing loss of heat prevents the need for extra food—a purely that rational biology is conferring on him. The truth that the production of animal heat implies waste of substance, and that, therefore, preventing loss of heat implies waste of substance, and that, therefore, theoretical conclusions—now guides the fattening of cattle: it is found that by keeping cattle warm, fodder is saved. Similarly with respect to variety of food. The experiments of physiologists have shown that not only is change of diet beneficial, but that digestion is facilitated by a mixture of ingredients in each meal. The discovery that a disorder known as “the staggers,” of which many thousands of sheep have died annually, is caused by an entozoon which presses on the brain, and that if the creature is extracted through the softened place in the skull which makes its position, the sheep usually recovers, is another debt which agriculture owes to biology.

Yet one more science have we to note as bearing directly on industrial success—the Science of Society. Men who daily look at the state of the money-market; glance over prices current; discuss the probable crops of corn, cotton, sugar, wool, silk; weigh the chances of war; and from these data decide on their mercantile operations; are students of social science: empirical and blundering students it may be; but still, students who gain the prizes or are plucked of their profits, according as they do or do not reach the right conclusion. Not only the manufacturer and the merchant must guide their transactions by calculations of supply and demand, based on numerous facts, and tacitly recognising sundry general principles of social actions; but even the retailer must do the like: his prosperity very greatly depending upon the correctness of his judgments respecting the future wholesale prices and the future rates of consumption.

Manifestly, whoever takes part in the entangled commercial activities of a community, is vitally interested in understanding the laws according to which those activities vary.

Thus, to all such as are occupied in the production, exchange, or distribution of commodities, acquaintance with Science in some of its departments, is of fundamental importance. Each man who is immediately or remotely implicated in any form of industry (and few are not) has in some way to deal with the mathematical, physical, and chemical properties of things; perhaps, also has a direct interest in biology; and certainly has in sociology. Whether he does or does not succeed well in that indirect self-preservation which we call getting a good livelihood, depends in a great degree on his knowledge of one or more of these sciences: not, it may be, a rational knowledge, but still a knowledge, though empirical. For what we call learning a business, really implies learning the science involved in it; though not perhaps under the name of science. And hence a grounding in science is of great importance, both because it prepares for all this, and because rational knowledge has an immense superiority over empirical knowledge. Moreover, not only is scientific culture requisite for each, that he may understand the how and the why of the things and process with which he is concerned as maker or distributor; but it is often of much moment that he should understand the how and the why of various other things and processes. In this age of joint-stock undertakings, nearly every man above the labourer is interested as capitalist in some other occupation than his own; and, as thus interested, his profit or loss often depends on his knowledge of the sciences bearing on this other occupation. Here is a mine, in the sinking of which many shareholders ruined themselves, from not knowing that a certain fossil belonged to the old red sandstone, below which no coal is found. Numerous attempts have been made to construct electro-magnetic engines, in the hope of superseding steam; but had those who supplied the money understood the general law of the correlation and equivalence of forces, they might have had better balances at their bankers. Daily are men induced to aid in carrying out inventions which a mere tyro in science could show to be futile. Scarcely a locality but has its history of fortunes thrown away over some impossible project.

And if already the loss from want of science is so frequent and so great, still greater and more frequent will it be to those who hereafter lack science. Just as fast as productive processes become more scientific, which competition will inevitably make them do; and just as fast as joint-stock undertakings spread, which they certainly will; so fast must scientific knowledge grow necessary to every one.

That which our school-courses leave almost entirely out, we thus find to be that which most nearly concerns the business of life. Our

industries would cease, were it not for the information which men begin to acquire, as they best may, after their education is said to be finished. And were it not for this information, from age to age accumulated and spread by unofficial means, these industries would never have existed. Had there been no teaching but such as goes on in our public schools, England would now be what it was in feudal times. That increasing acquaintance with the laws of phenomena, which has through successive ages enabled us to subjugate Nature to our needs, and in these days gives the common labourer comforts which a few centuries ago kings could not purchase, is scarcely in any degree owed to the appointed means of instructing our youth. The vital knowledge—that by which we have grown as a nation to what we are, and which now underlies our whole existence, is a knowledge that has got itself taught in nooks and corners; while the ordained agencies for teaching have been mumbling little else but dead formulas.

We now come to the third great division of human activities—a division for which no preparation whatever is made. If by some strange chance not a vestige of us descended to the remote future save a pile of our school-books or some college examination papers, we may imagine how puzzled an antiquary of the period would be on finding in them no sign that the learners were ever likely to be parents. "This must have been the curriculum for their celibates," we may fancy him concluding. "I perceive here an elaborate preparation for many things; especially for reading the books of extinct nations and of co-existing nations (from which indeed it seems clear that these people had very little worth reading in their own tongue; but I find no reference whatever to the bringing up of children. They could not have been so absurd as to omit all training for this gravest of responsibilities. Evidently then, this was the school-course of one of their monastic orders."

Seriously, is it not an astonishing fact, that though on the treatment of offspring depend their lives or deaths, and their moral welfare or ruin; yet not one word of instruction on the treatment of offspring is ever given to those who will by and by be parents? It is not monstrous that the fate of a new generation should be left to the chances of unreasoning custom, impulse fancy—joined with the suggestions of ignorant nurses and the prejudiced counsel of grandmothers? If a merchant commenced business without any knowledge of arithmetic and book-keeping, we should exclaim at his folly, and look for disastrous consequences. Or if, before studying anatomy, a man set up as a surgical operator, we should wonder at his audacity and pity his patients. But that parents should begin the difficult task of rearing children, without ever having given a thought to the principles—physical, moral, or intellectual—which ought to guide

them, excites neither surprise at the actors nor pity for their victims.

To tens of thousands that are killed, add hundreds of thousand that survive with feeble constitutions, and millions that grow up with constitutions not so strong as they should be; and you will have some idea of the curse inflicted on their offspring by parents ignorant of the laws of life. Do but consider for a moment that the regimen to which children are subject, is hourly telling upon them to their life-long injury or benefit; and that there are twenty ways of going wrong to one way of going right; and you will get some idea of the enormous mischief that is almost everywhere inflicted by the thoughtless, haphazard system in common use. Is it decided that a boy shall be clothed in some flimsy short dress, and be allowed to go playing about with limbs reddened by cold? The decision will tell on his whole future existence—either in illnesses; or in stunted growth; or in deficient energy; or in a maturity less vigorous than it ought to have been, and in consequent hindrances to success and happiness. Are children doomed to a monotonous dietary, or a dietary that is deficient in nutritiveness? Their ultimate physical power, and their efficiency as men and women, will inevitably be more or less diminished by it. Are they forbidden vociferous play, or (being too ill-clothed to bear exposure) are they kept indoors in cold weather? They are certain to fall below that measure of health and strength to which they would else have attained. When sons and daughters grow up sickly and feeble, parents commonly regard the event as a misfortune—as a visitation of Providence. Thinking after the prevalent chaotic fashion, they assume that these evils come without causes; or that the causes are supernatural. Nothing of the kind. In some cases the causes are doubtless inherited; but in most cases foolish regulations are the causes. Very generally, parents themselves are responsible for all this pain, this debility, this depression, this misery. They have undertaken to control the lives of their offspring from hour to hour; with cruel carelessness they have neglected to learn anything about these vital processes which they are unceasingly affecting by their commands and prohibitions; in utter ignorance of the simplest physiologic laws, they have been year by year undermining the constitutions of their children; and have so inflicted disease and premature death, not only on them but on their descendants.

Equally great are the ignorance and the consequent injury, when we turn from physical training to moral training. Consider the young mother and her nursery-legislation. But a few years ago she was at school, where her memory was crammed with words, and names, and dates, and her reflective faculties scarcely in the slightest degree exercised—where not one idea was given her respecting the methods of dealing with the opening mind of childhood; and where her discipline did not in the least fit her for thinking out methods of her own.

The intervening years have been passed in practising music, in fancy-work, in novel-reading, and party-going: no thought having yet been given to the grave responsibilities of maternity; and scarcely any of that solid intellectual culture obtained which would be some preparation for such responsibilities. And now see her with an unfolding human character committed to her charge—see her profoundly ignorant of the phenomena with which she has to deal, undertaking to do that which can be done but imperfectly even with the aid of the profoundest knowledge. She knows nothing about the nature of the emotions, their order of evolution, their functions, or where use ends and abuse begins. She is under the impression that some of the feelings are wholly bad, which is not true of any one of them; and that others are good however far they may be carried, which is also not true of any of them. And then, ignorant as she is of the structure she has to deal with, she is equally ignorant of the effects produced on it by this or that treatment. What can be more inevitable than the disastrous results we see hourly arising? Lacking knowledge of mental phenomena, with their cause and consequences, her interference is frequently more mischievous than absolute passivity would have been. This and that kind of action, which are quite normal and beneficial, she perpetually thwarts; and so diminishes the child's happiness and profit, injures its temper and her own, and produces estrangement. Deeds which she thinks it desirable to encourage, she gets performed by threats and bribes, or by exciting a desire for applause: considering little what the inward motive may be, so long as the outward conduct conforms; and thus cultivating hypocrisy, and fear, and selfishness, in place of good feeling. While insisting on truthfulness, she constantly sets an example of untruth by threatening penalties which she does not inflict. While inculcating self-control, she hourly visits on her little ones angry scoldings for acts undeserving of them. She has not the remotest idea that in the nursery, as in the world, that alone is the truly salutary discipline which visits on all conduct, good and bad, the natural consequences—the consequences, pleasurable or painful, which in the nature of things such conduct tends to bring. Being thus without theoretic guidance, and quite incapable of guiding herself by tracing the mental processes going on in her children, her rule is impulsive, inconsistent, mischievous; and would indeed be generally ruinous were it not that the overwhelming tendency of the growing mind to assume the moral type of the race usually subordinates all minor influences.

And then the culture of the intellect—is not this, too, mismanaged in a similar manner? Grant that the phenomena of intelligence conform to laws; grant that the evolution of intelligence in a child also conforms to laws; and it follows inevitably that education cannot be rightly guided without a knowledge of these laws. To suppose that

you can properly regulate this process of forming and accumulating ideas, without understanding the nature of the process is absurd. How widely, then, must teaching as it is differ from teaching as it should be; when hardly any parents, and but few tutors, know anything about psychology. As might be expected, the established system is grievously at fault, alike in matter and in manner. While the right class of facts is withheld, the wrong class is forcibly administered in the wrong way and in the wrong order. Under that common limited idea of education which confines it to knowledge gained from books, parents thrust primers into the hands of their little ones years too soon, to their great injury. Not recognising the truth that the function of books is supplementary—that they form an indirect means to acknowledge when direct means fail—a means of seeing through other men what you cannot see for yourself; teachers are eager to give second-hand facts in place of first-hand facts. Not perceiving the enormous value of that spontaneous education which goes on in early years—not perceiving that a child's restless observation, instead of being ignored or checked, should be diligently ministered to, and made as accurate and complete as possible; they insist on occupying its eyes and thoughts with things that are, for the time being, incomprehensible and repugnant. Possessed by a superstition which worships the symbols of knowledge instead of the knowledge itself, they do not see that only when his acquaintance with the objects and processes of the household, the streets, and the fields, is becoming tolerably exhaustive—only then should a child be introduced to the new sources of information which books supply: and this, not only because immediate cognition is of far greater value than mediate cognition; but also, because the words contained in books can be rightly interpreted into ideas, only in proportion to the antecedent experience of things. Observe next, that this formal instruction, far too soon commenced, is carried on with but little reference to the laws of mental development. Intellectual progress is of necessity from the concrete to the abstract. But regardless of this, highly abstract studies, such as grammar, which should come quite late, are begun quite early. Political geography, dead and uninteresting to a child, and which should be an appendage of sociological studies, is commenced betimes; while physical geography, comprehensible and comparatively attractive to a child, is in great part passed over. Nearly every subject dealt with is arranged in abnormal order: definitions and rules and principles being put first, instead of being disclosed, as they are in the order of nature, through the study of cases. And then, pervading the whole, is the vicious system of rote learning—a system of sacrificing the spirit to the letter. See the results. What with perceptions unnaturally dulled by early thwarting, and a coerced attention to books—what with the mental confusion produced

by teaching subjects before they can be understood, and in each of them giving generalisations before the facts of which they are the generalisations—what with making the pupil a mere passive recipient of other's ideas, and not in the least leading to be an active inquirer or self-instructor—and what with taxing the faculties to excess; there are very few minds that become as efficient as they might be. Examinations being once passed, books are laid aside; the greater part of what has been acquired, being unorganised, soon drops out of recollection; what remains is mostly inert—the art of applying knowledge not having been cultivated; and there is but little power either of accurate observation of independent thinking. To all which add, that while much of the information gained is of relatively small value, an immense mass of information of transcendent value is entirely passed over.

Thus we find the facts to be such as might have been inferred *à priori*. The training of children—physical, moral, and intellectual—is dreadfully defective. And in great measure it is so because parents are devoid of that knowledge by which this training can alone be rightly guided. What is to be expected when one of the most intricate of problems is undertaken by those who have given scarcely a thought to the principles on which its solution depends? For shoe-making or house-building, for the management of a ship or a locomotive engine, a long apprenticeship is needful. Is it, then, that the unfolding of a human being in body and mind is so comparatively simple a process that any one may superintend and regulate it with no preparation whatever? If not—if the process is, with one exception, more complex than any in Nature, and the task of ministering to it one of surpassing difficulty; is it not madness to make no provision for such a task? Better sacrifice accomplishments than omit this all-essential instruction. When a father, acting on false dogmas adopted without examination, has alienated his sons, driven them into rebellion by his harsh treatment, ruined them, and made himself miserable; he might reflect that the study of Ethology would have been worth pursuing, even at the cost of knowing nothing about Æschylus. When a mother is mourning over a first born that has sunk under the sequelæ of scarlet-fever—when perhaps a candid medical man has confirmed her suspicion that her child would have recovered had not its system been enfeebled by over-study—when she is prostrate under the pangs of combined grief and remorse; it is but a small consolation that she can read Dante in the original.

Thus we see that for regulating the third great division of human activities, a knowledge of the laws of life is the one thing needful. Some acquaintance with the first principles of physiology and the elementary truths of psychology, is indispensable for the right

bringing up of children. We doubt not that many will read this assertion with a smile. That parents in general should be expected to acquire a knowledge of subjects so abstruse will seem to them an absurdity. And if we proposed that an exhaustive knowledge of these subjects should be obtained by all fathers and mothers, the absurdity would indeed be glaring enough. But we do not. General principles only, accompanied by such illustrations as may be needed to make them understood, would suffice. And these might be readily taught—if not rationally, then dogmatically. Be this as it may, however, here are the indispensable facts:—that the development of children in mind and body follows certain laws; that unless these laws are in some degree conformed to by parents, death is inevitable; that unless they are in a great degree conformed to, there must result serious physical and mental defects; and that only when they are completely conformed to, can a perfect maturity be reached. Judge, then, whether all who may one day be parents, should not strive with some anxiety to learn what these laws are.

From the parental functions let us pass now to functions of the citizen. We have here to inquire what knowledge fits a man for the discharge of these functions. It cannot be alleged that the need for knowledge fitting him for these functions is wholly overlooked; for our school-courses contain certain studies, which, nominally at least, bear upon political and social duties. Of these the only one that occupies a prominent place is History.

But, as already hinted, the information commonly given under this head, is almost valueless for purposes of guidance. Scarcely any of the facts set down in our school-histories, and very few of those contained in the more elaborate works written for adults, illustrate the right principles of political action. The biographies of monarchs (and our children learn little else) throw scarcely any light upon the science of society. Familiarity with court intrigues, plots, usurpations, or the like, and with all the personalities accompanying them, aids very little in elucidating the causes of national progress. We read of some squabble for power, that it led to a pitched battle; that such and such were the names of the generals and their leading subordinates; that they had each so many thousand infantry and cavalry, and so many cannon; that they arranged their forces in this and that order; that they manœuvred, attacked, and fell back in certain ways; that at this part of the day such disasters were sustained, and at that such advantage gained; that in one particular movement some leading officer fell, while in another a certain regiment was decimated; that after all the changing fortunes of the fight, the victory was gained by this or that army; and that so many were killed and wounded on each side, and so many captured by the conquerors. And now, out of the accumu-

lated details making up the narrative, say which it is that helps you in deciding on your conduct as a citizen. Supposing even that you had diligently read, not only *The Fifteen Decisive Battles of the World*, but accounts of all other battles that history mentions; how much more judicious would your vote be at the next election? "But these are facts—interesting facts," you say. Without doubt they are facts (such, at least, as are not wholly or partially fictions); and to many they may be interesting facts. But this by no means implies that they are valuable. Factitious or morbid opinion often gives seeming value to things that have scarcely any. A tulipomaniac will not part with a choice bulb for its weight in gold. To another man an ugly piece of cracked old china seems his most desirable possession. And there are those who give high prices for the relics of celebrated murders. Will it be contended that these tastes are any measures of value in the things that gratify them? If not, then it must be admitted that the liking felt for certain classes of historical facts is no proof of their worth; and that we must test their worth, as we test the worth of other facts, by asking to what uses they are applicable. Were some one to tell you that your neighbor's cat kittened yesterday, you would say the information was valueless. Fact though it might be, you would call it an utterly useless fact—a fact that could in no way influence your actions in life—a fact that would not help you in learning how to live completely. Well, apply the same test to the great mass of historical facts, and you will get the same result. They are facts from which no conclusions can be drawn—unorganisable facts; and therefore facts of no service in establishing principles of conduct, which is the chief use of facts. Read them, if you like, for amusement; but do not flatter yourself they are instructive.

That which constitutes History, properly so called, is in great part omitted from works on the subject. Only of late years have historians commenced giving us, in any considerable quantity, the truly valuable information. As in past ages the king was everything and the people nothing; so, in past histories the doings of the king fill the entire picture, to which the national life forms but an obscure background. While only now, when the welfare of nations rather than of rulers is becoming the dominant idea, are historians beginning to occupy themselves with the phenomena of social progress. The thing it really concerns us to know is the natural history of society. We want all facts which help us to understand how a nation has grown and organized itself. Among these, let us of course have an account of its government; with as little as may be of gossip about the men who officered it, and as much as possible about the structure, principles, methods, prejudices, corruptions, etc., which it exhibited: and let this account include not only the

nature and actions of the central government, but also those of loyal governments, down to their minutest ramifications. Let us of course also have a parallel description of the ecclesiastical government—its organization, its conduct, its power, its relations to the State; and accompanying this, the ceremonial, creed, and religious ideas—not only those nominally believed, but those really believed and acted upon. Let us at the same time be informed of the control exercised by class over class, as displayed in social observances—in titles, salutations, and forms of address. Let us know, too, what were all the other customs which regulated the popular life out of doors and in-doors: including those concerning the relations of the sexes, and the relations of parents to children. The superstitions, also, from the more important myths down to the charms in common use, should be indicated. Next should come a delineation of the industrial system: showing to what extent the division of labour was carried; how trades were regulated, whether by caste, guilds, or otherwise; what was the connection between employers and employed; what were the agencies for distributing commodities; what were the means of communications; what was the circulating medium. Accompanying all which should be given an account of the industrial arts technically considered: stating the processes in use, and the quality of the products. Further, the intellectual condition of the nation in its various grades should be depicted; not only with respect to the kind and amount of education, but with respect to the progress made in science, and the prevailing manner of thinking. The degree of æsthetic culture, as displayed in architecture, sculpture, painting, dress, music, poetry, and fiction should be described. Nor should there be omitted a sketch of the daily lives of the people—their food, their homes, and their amusements. And lastly, to connect the whole, should be exhibited the morals, theoretical and practical, of all classes: as indicated in their laws, habits, proverbs, deeds. These facts, given with as much brevity as consists with clearness and accuracy, should be so grouped and arranged that they may be comprehended in their ensemble, and contemplated as mutually-dependent parts of one great whole. The aim should be so to present them that men may readily trace the consensus subsisting among them; with the view of learning what social phenomena co-exist with what other. And then the corresponding delineations of succeeding ages should be so managed as to show how each belief, institution, custom, and management was modified; and how the consensus of preceding structures and functions was developed into the consensus of succeeding ones. Such alone is the kind of information respecting past times which can be of service to the citizen for the regulation of his conduct. The only history that is of practical value is what may be called Descriptive Sociology. And

the highest office which the historian can discharge, is that of so narrating the lives of nations, as to furnish materials for a Comparative Sociology and for the subsequent determination of the ultimate laws to which social phenomena conform.

But new mark, that even supposing an adequate stock of this truly valuable historical knowledge has been acquired, it is of comparatively little use without the key. And the key is to be found only in Science. In the absence of the generalisations of biology and psychology, rational interpretation of social phenomena is impossible. Only in proportion as men draw certain rude, empirical inferences respecting human nature, are they enabled to understand even the simplest facts of social life: as, for instance, the relation between supply and demand. And if the most elementary truths of sociology cannot be reached until some knowledge is obtained of how men generally think, feel, and act under given circumstances; then it is manifest that there can be nothing like a wide comprehension of sociology, unless through a competent acquaintance with man in all his faculties, bodily, and mental. Consider the matter in the abstract, and this conclusion is self-evident. Thus:—Society is made up of individuals; all that is done in society is done by the combined actions of individuals; and therefore, in individual actions only can be found the solutions of social phenomena. But the actions of individuals depend on the laws of their natures; and their actions cannot be understood until these laws are understood. These laws, however, when reduced to their simplest expressions, prove to be corollaries from the laws of body and mind in general. Hence it follows, that biology and psychology are indispensable as interpreters of sociology. Or, to state the conclusions still more simply:—all social phenomena are phenomena of life—are the most complex manifestations of life—must conform to the laws of life—and can be understood only when the laws of life are understood. Thus, then, for the regulation of this fourth division of human activities, we are, as before, dependent on Science. Of the knowledge commonly imparted in educational courses, very little is of service for guiding a man in his conduct as a citizen. Only a small part of the history he reads is of practical value; and of this small part he is not prepared to make proper use. He lacks not only the materials for, but the very conception of, descriptive sociology; and he also lacks those generalisations of the organic sciences, without which even descriptive sociology can give him but small aid.

And now we come to that remaining division of human life which includes the relaxations and amusements filling leisure hours. After considering what training best fits for self-preservation, for the obtaining of sustenance, for the discharge of parental duties, and for the regulation of social and political conduct; we have now to con-

sider what training best fit for the miscellaneous ends not included in these—for the enjoyment of Nature, of Literature, and of the Fine Arts, in all their forms. Postponing them as we do to things that bear more vitally upon human welfare; and bringing everything, as we have, to the test of actual value; it will perhaps be inferred that we are inclined to slight these less essential things. No greater mistake could be made, however. We yield to none in the value we attach to æsthetic culture and its pleasures. Without painting, sculpture, music, poetry, and the emotions produced by natural beauty of every kind, life would lose half its charm. So far from regarding the training and gratification of the tastes as unimportant, we believe that in time to come they will occupy a much larger share of human life than now. When the forces of Nature have been fully conquered to man's use—when the means of production have been brought to perfection—when labour has been economised to the highest degree—when education has been so systematised that a preparation for the more essential activities may be made with comparative rapidity—and when, consequently, there is a great increase of spare time; then will the beautiful, both in Art and Nature, rightly fill a large space in the minds of all.

But it is one thing to approve of æsthetic culture as largely conducive to human happiness; and another thing to admit that it is a fundamental requisite to human happiness. However important it may be, it must yield precedence to those kinds of culture which bear directly upon daily duties. As before hinted, literature and the fine arts are made possible by those activities which make individual and social life possible; and manifestly, that which is made possible, must be postponed to that which makes it possible. A florist cultivates a plant for the sake of its flower; and regards the roots and leaves as of value, chiefly because they are instrumental in producing the flower. But while, as an ultimate product, the flower is the thing to which everything else is subordinate, the florist has learnt that the root and leaves are intrinsically of greater importance; because on them the evolution of the flower depends. He bestows every care in rearing a healthy plant; and knows it would be folly if, in his anxiety to obtain the flower, he were to neglect the plant. Similarly in the case before us. Architecture, sculpture, painting, music, and poetry, may truly be called the efflorescence of civilised life. But even supposing they are of such transcendent worth as to subordinate the civilised life out of which they grow (which can hardly be asserted), it will still be admitted that the production of a healthy civilised life must be the first consideration; and that culture subserving this must occupy the highest place.

And here we see most distinctly the vice of our educational system. It neglects the plant for the sake of the flower. In anxiety

for elegance, it forgets substance. While it gives no knowledge conducive to self-preservation—while of knowledge that facilitates gaining a livelihood it gives but the rudiments, and leaves the greater part to be picked up any how in after life—while for the discharge of parental functions it makes not the slightest provision—and while for the duties of citizenship it prepares by imparting a mass of facts, most of which are irrelevant, and the rest without a key; it is diligent in teaching whatever adds to refinement, polish, éclat. Fully as we may admit that extensive acquaintance with modern languages is a valuable accomplishment, which, through reading, conversation, and travel, aids in giving a certain finish; it by no means follows that this result is rightly purchased at the cost of the vitally important knowledge sacrificed to it. Supposing it true that classical education conduces to elegance and correctness of style; it cannot be said that elegance and correctness of style are comparable in importance to a familiarity with the principles that should guide the rearing of children. Grant that the taste may be improved by reading the poetry written in extinct languages; yet it is not to be inferred that such improvement of taste is equivalent in value to an acquaintance with the laws of health. Accomplishments, the fine arts, *belles-lettres*, and all those things which, as we say, constitute the efflorescence of civilisation, should be wholly subordinate to that instruction and discipline in which civilization rests. As they occupy the leisure part of life, so should they occupy the leisure part of education.

Recognising thus the true position of æsthetics, and holding that while the cultivation of them should form a part of education from its commencement, such cultivation should be subsidiary; we have now to inquire what knowledge is of most use to this end—what knowledge best fits for this remaining sphere of activity? To this question the answer is still the same as heretofore. Unexpected though the assertion may be, it is nevertheless true, that the highest Art of every kind is based on Science—that without Science there can be neither perfect production nor full appreciation. Science, in that limited acceptation current in society, may not have been possessed by various artists of high repute; but acute observers as such artists have been, they have always possessed a stock of those empirical generalisations which constitute science in its lowest phase; and they have habitually fallen far below perfection, partly because their generalisations were comparatively few and inaccurate. That science necessarily underlies the fine arts, became manifest, *à priori*, when we remember that art-products are all more or less representative of objective or subjective phenomena; that they can be good only in proportion as they conform to the laws of these phenomena; and that before they can thus conform, the artist must know what these

laws are. That this *à priori* conclusion tallies with experience, we shall soon see.

Youths preparing for the practice of sculpture have to acquaint themselves with the bones and muscles of the human frame in their distribution, attachments, and movements. This is a portion of science; and it has been found needful to impart it for the prevention of those many errors which sculptors who do not possess it commit. A knowledge of mechanical principles is also requisite; and such knowledge not being usually possessed, grave mechanical mistakes are frequently made. Take an instance. For the stability of a figure it is needful that the perpendicular from the centre of gravity—"the line of direction," as it is called—should fall within the base of support; and hence it happens, that when a man assumes the attitude known as "standing at ease," in which one leg is straightened and the other relaxed, the line of direction fall within the foot of the straightened leg. But unfamiliar with the theory of equilibrium, not uncommonly so represent this attitude, that the line of direction falls midway between the feet. Ignorance of the law of momentum leads to analogous blunders: as witness the admired Discobolus, which, as it is posed, must inevitably fall forward the moment the quoit is delivered.

In painting, the necessity for scientific information, empirical if not rational, is still more conspicuous. What gives the grotesqueness of Chinese pictures, unless their utter disregard of the laws of appearances—their absurd linear perspective, and their want of aerial perspective? In what are the drawings of a child so faulty, if not in a similar absence of truth—an absence arising, in great part, from ignorance of the way in which the aspects of things vary with the conditions? Do but remember the books and lectures by which students are instructed; or consider the criticisms of Ruskin; or look at the doings of the Pre-Raphaelites; and you will see that progress in painting implies increasing knowledge of how effects in Nature are produced. The most diligent observation, if unaided by science, fails to preserve from error. Every painter will endorse the assertion that unless it is known what appearances must exist under given circumstances, they often will not be perceived; and to know what appearances must exist, is, in so far, to understand the science of appearances. From want of science Mr. J. Lewis, careful painter as he is, casts the shadow of a lattice-window in sharply-defined lines upon an opposite wall! which he would not have done, had he been familiar with the phenomena of penumbrae. From want of science, Mr. Rosetti, catching sight of a peculiar iridescence displayed by certain hairy surfaces under particular lights (an iridescence caused by the diffraction of light in passing the hairs), com-

mits the error of showing this iridescence on surfaces and in positions where it could not occur.

To say that music, too, has need of scientific aid will cause still more surprise. Yet it may be shown that music is but an idealisation of the natural language of emotion; and that consequently, music must be good or bad according as it conforms to the laws of this natural language. The various inflections of voice which accompany feelings of different kinds and intensities, are the germs out of which music is developed. It is demonstrable that these inflections and cadences are not accidental or arbitrary; but that they are determined by certain general principles of vital action; and that their expressiveness depends on this. Whence it follows that musical phrases and the melodies built of them, can be effective only when they are in harmony with these general principles. It is difficult here properly to illustrate this position. But perhaps it will suffice to instance the swarms of worthless ballads that infest drawing-rooms, as compositions which science would forbid. They sin against science by setting to music ideas that are not emotional enough to prompt musical expression; and they also sin against science by using musical phrases that have no natural relations to the ideas expressed: even where these are emotional. They are bad because they are untrue. And to say they are untrue, is to say they are unscientific.

Even in poetry the same thing holds. Like music, poetry has its root in those natural modes of expression which accompany deep feeling. Its rhythm, its strong and numerous metaphors, its hyperboles, its violent inversions, are simply exaggerations of the traits of excited speech. To be good, therefore, poetry must pay attention to those laws of nervous action which excited speech obeys. In intensifying and combining the traits of excited speech, it must have due regard to proportion—must not use its appliances without restriction; but, where the ideas are least emotional, must use the forms of poetical expression sparingly; must use them more freely as the emotion rises; and must carry them to their greatest extent, only where the emotion reaches a climax. The entire contravention of these principles results in bombast or doggerel. The insufficient respect for them is seen in didactic poetry. And it is because they are rarely fully obeyed, that so much poetry is inartistic.

Not only is it that the artist, of whatever kind, cannot produce a truthful work without he understands the laws of the phenomena he represents; but it is that he must also understand how the minds of spectators or listeners will be affected by the several peculiarities of his work—a question in psychology. What impression any art-product generates, manifestly depends upon the mental natures of those to whom it is presented; and as all mental natures have cer-

tain characteristics in common, there must result certain corresponding general principles on which alone art-products can be successfully framed. These general principles cannot be fully understood and applied, unless the artist sees how they follow from the laws of mind. To ask whether the composition of a picture is good is really to ask how the perceptions and feelings of observers will be affected by it. To ask whether a drama is well constructed, is to ask whether its situations are so arranged as duly to consult the power of attention of an audience, and duly to avoid overtaxing any one class of feelings. Equally in arranging the leading divisions of a poem or fiction, and in combining the words of a single sentence, the goodness of the effect depends upon the skill with which the mental energies and susceptibilities of the reader are economised. Every artist, in the course of his education and after-life, accumulates a stock of maxims by which his practise is regulated. Trace such maxims to their roots, and they inevitably lead you down to psychological principles. And only when the artist understands these psychological principles and their various corollaries can he work in harmony with them.

We do not for a moment believe that science will make an artist. While we contend that the leading laws both of objective and subjective phenomena must be understood by him, we by no means contend that knowledge of such laws will serve in place of natural perception. Not the poet only, but the artist of every type, is born, not made. What we assert is, that innate faculty cannot dispense with the aid of organized knowledge. Intuition will do much, but it will not do all. Only when Genius is married to Science can the highest results be produced.

As we have above asserted, Science is necessary not only for the most successful production, but also for the full appreciation, of the fine arts. In what consists the greater ability of a man than of a child to perceive the beauties of a picture; unless it is in his more extended knowledge of those truths in nature or life which the picture renders? How happens the cultivated gentleman to enjoy a fine poem so much more than a boor does; if it is not because his wider acquaintance with objects and actions enables him to see in the poem much that the boor cannot see? And if, as is here so obvious, there must be some familiarity with the things represented, before the representation can be appreciated, then, the representation can be completely appreciated only when the things represented are completely understood. The fact is, that every additional truth which a word of art expresses, gives an additional pleasure to the percipient mind—a pleasure that is missed by those ignorant of this truth. The more realities an artist indicates in any given amount of work, the more faculties does he appeal to; the more numerous

ideas does he suggest, the more gratification does he afford. But to receive this gratification the spectator, listener, or reader, must know the realities which the artist has indicated; and to know these realities is to have that much science.

And now let us not overlook the further great fact, that not only does science underlie sculpture, painting, music, poetry, but that science is itself poetic. The current opinion that science and poetry are opposed, is a delusion. It is doubtless true that as states of consciousness, cognition and emotion tend to exclude each other. And it is doubtless also true that an extreme activity of the reflective powers tends to deaden the feelings; while an extreme activity of the feelings tends to deaden the reflective powers: in which sense, indeed, all orders of activity are antagonistic to each other. But it is not true that the facts of science are unpoetical; or that the cultivation of science is necessarily unfriendly to the exercise of imagination and the love of the beautiful. On the contrary, science opens up realms of poetry where to the unscientific all is a blank. Those engaged in scientific researches constantly show us that they realise not less vividly, but more vividly, than others, the poetry of their subjects. Whoso will dip into Hugh Miller's works of geology, or read Mr. Lewes's *Sea-side Studies*, will perceive that science excites poetry rather than extinguishes it. And he who contemplates the life of Goethe, must see that the poet and the man of science can co-exist in equal activity. Is it not, indeed, an absurd and almost a sacrilegious belief, that the more a man studies Nature the less he reveres it? Think you that a drop of water, which to the vulgar eye is but a drop of water, loses anything in the eye of the physicist who knows that its elements are held together by a force which, if suddenly liberated, would produce a flash of lightning? Think you that what is carelessly looked by the uninitiated as a mere snow-flake, does not suggest higher associations to one who had seen through a microscope the wondrously-varied and elegant forms of snow-crystals? Think you that the rounded rock marked with parallel scratches, calls up as much poetry in an ignorant mind as in the mind of a geologist, who knows that over this rock a glacier slid a million years ago? The truth is that those who have never entered upon scientific pursuits are blind to most of the poetry by which they are surrounded. Whoever has not in youth collected plants and insects, knows not half the halo of interest which lanes and hedge-rows can assume. Whoever has not sought for fossils, has little idea of the poetical associations that surround the places where imbedded treasures were found. Whoever at the sea-side has not had a microscope and aquarium, has yet to learn what the highest pleasures of the sea-side are. Sad, indeed, is it to see men occupy themselves with trivialities, and are indifferent to

the grandest phenomena—care not to understand the architecture of the Heavens, but are deeply interested in some contemptible controversy about the intrigues of Mary Queen of Scots!—are learnedly critical over a Greek ode, and pass by without a glance that grand epic written by the finger of God upon the strata of the Earth!

We find, then, that even for this remaining division of human activities, scientific culture is the proper preparation. We find that æsthetics in general are necessarily based upon scientific principles; and can be pursued with complete success only through an acquaintance with these principles. We find that for the criticism and due appreciation of works of art, a knowledge of the constitution of things, or in other words, a knowledge of science, is requisite. And we not only find that science is the handmaid to all forms of art and poetry, but that, rightly regarded, science is itself poetic.

Thus far our question has been, the worth of knowledge of this or that kind for purposes of guidance. We have now to judge the relative value of different kinds of knowledge for purposes of discipline. This division of our subject we are obliged to treat with comparative brevity; and happily, no very lengthened treatment of it is needed. Having found what is best for the one end, we have by implication found what is best for the other. We may be quite sure that the acquirement of those classes of facts which are most useful for regulating conduct, involves a mental exercise best fitted for strengthening the faculties. It would be utterly contrary to the beautiful economy of Nature, if one kind of culture were needed for the gaining of information and another kind were needed as a mental gymnastic. Everywhere throughout creation we find faculties developed through the performance of those functions which it is their office to perform; not through the performance of artificial exercises devised to fit them for those functions. The Red Indian acquires the swiftness and agility which make him a successful hunter, by the actual pursuit of animals; and through the miscellaneous activities of his life, he gains a better balance of physical powers than gymnastics ever give. That skill in tracking enemies and prey which he had reached after long practice, implies a subtlety of perception far exceeding anything produced by artificial training. And similarly in all cases. From the Bushman whose eye, habitually employed in identifying distant objects that are to be pursued or fled from, has acquired a telescopic range, to the accountant whose daily practice enables him to add up several columns of figures simultaneously; we find that the highest power of a faculty results from the discharge of those duties which the conditions of life require it to discharge. And we may be certain, *à priori*, that the same law holds throughout education. The education of

most value for guidance, must at the same time be the education of most value for discipline. Let us consider the evidence.

One advantage claimed for that devotion to language-learning which forms so prominent a feature in the ordinary curriculum, is, that the memory is thereby strengthened. This is assumed to be an advantage peculiar to the study of words. But the truth is, that the sciences afford far wider fields for the exercise of memory. It is no slight task to remember everything about our solar system; much more to remember all that is known concerning the structure of our galaxy. The number of compound substances, to which chemistry daily adds, is so great that few, save professors, can enumerate them; and to recollect the atomic constitutions and affinities of all these compounds, is scarcely possible without making chemistry the occupation of life. In the enormous mass of phenomena presented by the Earth's crust, and in the still more enormous mass of phenomena presented by the fossils it contains, there is matter which it takes the geological student years of application to master. Each leading division of physics—sound, heat, light, electricity—includes facts numerous enough to alarm any one proposing to learn them all. And when we pass to the organic sciences, the effort of memory required becomes still greater. In human anatomy alone, the quantity of detail is so great, that the young surgeon has commonly to get it up half-a-dozen times before he can permanently retain it. The number of species of plants which botanists distinguish, amounts to some 320,000; while the varied forms of animal life with which the zoologist deals, are estimated at some 2,000,000. So vast is the accumulation of facts which men of science have before them, that only by dividing and subdividing their labors can they deal with it. To a detailed knowledge of his own division, each adds but a general knowledge of the allied ones; joined perhaps to a rudimentary acquaintance with some others. Surely, then, science, cultivated even to a very moderate extent, affords adequate exercise for memory. To say the very least, it involves quite as good a discipline for this faculty as language does.

But now mark that while, for the training of mere memory, science is as good as, if not better than, language; it has an immense superiority in the kind of memory it trains. In the acquirement of a language, the connections of ideas to be established in the mind correspond to facts that are in great measure accidental; whereas, in the acquirement of science, the connections of ideas to be established in the mind correspond to facts that are mostly necessary. It is true that the relations of words to their meanings are in one sense natural; that the genesis of these relations may be traced back a certain distance, though rarely to the beginning; and that the laws of this genesis form a branch of mental science—the science

of philology. But since it will not be contended that in the acquisition of languages, as ordinarily carried on, these natural relations between words and their meanings are habitually traced, and their laws explained; it must be admitted that they are commonly learned as fortuitous relations. On the other hand, the relations which science presents are casual relations; and, when properly taught, are understood as such. While language familiarizes with non-rational relations, science familiarises with rational relations. While the one exercises memory only, the other exercises both memory and understanding.

Observe next, that a great superiority of science over language as a means of discipline, is, that it cultivates the judgment. As, in a lecture on mental education delivered at the Royal Institution, Professor Faraday well remarks, the most common intellectual fault is deficiency of judgment. "Society, speaking generally," he says, "is not only ignorant as respects education of the judgment, but it is also ignorant of its ignorance." And the cause to which he ascribes this state, is want of scientific culture. The truth of his conclusion is obvious. Correct judgment with regard to surrounding objects, events, and consequences, becomes possible only through knowledge of the way in which surrounding phenomena depend on each other. No extent of acquaintance with the meanings of words, will guarantee correct inferences respecting causes and effects. The habit of drawing conclusions from data, and then of verifying those conclusions by observation and experiment, can alone give the power of judging correctly. And that it necessitates this habit is one of the immense advantages of science.

Not only, however, for intellectual discipline is science the best; but also for *moral* discipline. The learning of languages tends, if anything, further to increase the already undue respect, for authority. Such and such are the meanings of these words, says the teacher of the dictionary. So and so is the rule in this case, says the grammar. By the pupil these dicta are received as unquestionable. His constant attitude of mind is that of submission to dogmatic teaching. And a necessary result is a tendency to accept without inquiry whatever is established. Quite opposite is the mental tone generated by the cultivation of science. Science makes constant appeal to individual reason. Its truths are not accepted on authority alone; but all are at liberty to test them—nay, in many cases, the pupil is required to think out his own conclusions. Every step in a scientific investigation is submitted to his judgment. He is not asked to admit it without seeing it to be true. And the trust in his own powers thus produced is further increased by the uniformity with which Nature justifies his inferences when they are correctly drawn. From all which there flows that independence

which is a most valuable element in character. Nor is this the only moral benefit bequeathed by scientific culture. When carried on, as it should always be, as much as possible under the form of original research, it exercises perseverance and sincerity. As says Professor Tyndall of inductive inquiry, "It requires patient industry, and an humble and conscientious acceptance of what Nature reveals. The first condition of success is an honest receptivity and a willingness to abandon all preconceived notions, however cherished, if they be found to contradict the truth. Believe me, self-renunciation which has something noble in it, and of which the world never hears, is often enacted in the private experience of the true votary of science."

Lastly we have to assert—and the assertion will, we doubt not, cause extreme surprise—that the discipline of science is superior to that of our ordinary education, because of the *religious* culture that it gives. Of course we do not here use the words scientific and religious in their ordinary limited acceptations; but in their widest and highest acceptations. Doubtless, to the superstitions that pass under the name of religion, science is antagonistic; but not to the essential religion which these superstitions merely hide. Doubtless, too, in much of the science that is current, there is a prevailing spirit of irreligion; but not in that true science which had passed beyond the superficial into the profound.

"True science and true religion," says Professor Huxley at the close of a recent course of lectures, "are twin-sisters, and the separation of either from the other is sure to prove the death of both. Science prospers exactly in proportion as it is religious; and religion flourishes in exact proportion to the scientific depth and firmness of its basis. The great deeds of philosophers have been less the fruit of their intellect than of the direction of that intellect by an eminently religious tone of mind. Truth has yielded herself rather to their patience, their love, their single-heartedness, and their self-denial, than to their logical acumen."

So far from science being irreligious, as many think, it is the neglect of science that is irreligious—it is the refusal to study the surrounding creation that is irreligious. Take a humble simile. Suppose a writer were daily saluted with praises couched in superlative language. Suppose the wisdom, the grandeur, the beauty of his works, were the constant topics of the eulogies addressed to him. Suppose those who unceasingly uttered these eulogies on his works were content with looking at the outsides of them; and had never opened them, much less tried to understand them. What value should we put upon their praises? What should we think of their

sincerity? Yet, comparing small things to great, such is the conduct of mankind in general, in reference to the Universe and its Cause. Nay, it is worse. Not only do they pass by without study, these things which they daily proclaim to be so wonderful; but very frequently they condemn as mere triflers those who give time to the observation of Nature—they actually scorn those who show any active interest in these marvels. We repeat, then, that not science, but the neglect of science, is irreligious. Devotion to science, is a tacit worship—a tacit recognition of worth in the things studied; and by implication in their Cause. It is not a mere lip-homage, but a homage expressed in actions—not a mere professed respect, but a respect proved by the sacrifice of time, thought, and labor.

Nor is it thus only that true science is essentially religious. It is religious, too, inasmuch as it generates a profound respect for, and an implicit faith in, those uniformities of action which all things disclose. By accumulated experiences the man of science acquires a thorough belief in the unchanging relations of phenomena—in the invariable connection of cause and consequence—in the necessity of good or evil results. Instead of the rewards and punishments of traditional belief, which people vaguely hope they may gain, or escape, spite of their disobedience; he finds that there are rewards and punishments in the ordained constitution of things; and that the evil results of disobedience are inevitable. He sees that the laws to which we must submit are both inexorable and beneficent. He sees that in conforming to them, the process of things is ever towards a greater perfection and a higher happiness. Hence he is led constantly to insist on them, and is indignant when they are disregarded. And thus does he, by asserting the eternal principles of things and the necessity of obeying them, prove himself intrinsically religious.

Add lastly the further religious aspect of science, that it alone can give us true conceptions of ourselves and our relation to the mysteries of existence. At the same time that it shows us all which can be known, it shows us the limits beyond which we can know nothing. Not by dogmatic assertion, does it teach the impossibility of comprehending the Ultimate Cause of things; but it leads us clearly to recognize this impossibility by bringing us in every direction to boundaries we cannot cross. It realises to us in a way which nothing else can, the littleness of human intelligence in the face of that which transcends human intelligence. While towards the traditions and authorities of men its attitude may be proud, before the impenetrable veil which hides the Absolute its attitude is humble—a true pride and a true humility. Only the sincere man of science (and by this title we do not mean the mere calculator of distances, or

analyser of compounds, or labeller of species; but him who through lower truths seeks higher, and eventually the highest)—only the genuine man of science, we say, can truly know how utterly beyond, not only human knowledge but human conception, is the Universal Power of which Nature, and Life, and Thought are manifestations.

We conclude, then, that for discipline, as well as for guidance, science is of chiefest value. In all its effects, learning the meanings of things, is better than learning the meanings of words. Whether for intellectual, moral, or religious training, the study of surrounding phenomena is immensely superior to the study of grammars and lexicons.

Thus to the question we set out with—What knowledge is of most worth?—the uniform reply is—Science. This is the verdict on all the counts. For direct self-preservation, or the maintenance of life and health, the all-important knowledge is—Science. For that indirect self-preservation which we call gaining a livelihood, the knowledge of greatest value is—Science. For the due discharge of parental functions, the proper guidance is to be found only in—Science. For that interpretation of national life, past and present, without which the citizen cannot rightly regulate his conduct, the indispensable key is—Science. Alike for the most perfect production and highest enjoyment of art in all its forms, the needful preparation is still—Science. And for purposes of discipline—intellectual, moral, religious—the most efficient study is, once more—Science. The question which at first seemed so perplexed, has become, in the course of our inquiry, comparatively simple. We have not to estimate the degrees of importance of different orders of human activity, and different studies as severally fitting us for them; since we find that the study of Science, in its most comprehensive meaning, is the best preparation for all these orders of activity. We have not to decide between the claims of knowledge of great though conventional value, and knowledge of less though intrinsic value; seeing that the knowledge which proves to be of most value in all other respects, is intrinsically most valuable: its worth is not dependent upon opinion, but is as fixed as is the relation of man to the surrounding world. Necessary and eternal as are its truths, all Science concerns all mankind for all time. Equally at present and in the remotest future, must it be of incalculable importance for the regulation of their conduct, that men should understand the science of life, physical, mental, and social; and that they should understand all other science as a key to the science of life.

And yet this study, immensely transcending all other in importance, is that which, in an age of boasted education, receives the least attention. While what we call civilisation could never,

have arisen had it not been for science, science forms scarcely an appreciable element in our so-called civilised training. Though to the progress of science we owe it, that millions find support where once there was food only for thousands; yet of these millions but a few thousands pay any respect to that which has made their existence possible. Though increasing knowledge of the properties and relations of things has not only enabled wandering tribes to grow into populous nations, but has given to the countless members of these populous nations, comforts and pleasures which their few naked ancestors never even conceived, or could have believed, yet is this kind of knowledge only now receiving a grudging recognition in our highest educational institutions. To the slowly growing acquaintance with the uniform co-existences and sequences of phenomena—to the establishment of invariable laws, we owe our emancipation from the grossest superstitions. But for science we should be still worshipping fetishes; or, with hecatombs of victims, propitiating diabolical deities. And yet this science, which, in place of the most degrading conceptions of things, has given us some insight into the grandeurs of creation, is written against in our theologies and frowned upon from our pulpits.

Paraphrasing an Eastern fable, we may say that in the family of knowledges, Science is the household drudge, who, in obscurity, hides unrecognised perfections. To her has been committed all the works; by her skill, intelligence, and devotion, have all conveniences and gratifications been obtained; and while ceaselessly ministering to the rest, she has been kept in the background, that her haughty sisters might flaunt their fripperies in the eyes of the world. The parallel holds yet further. For we are fast coming to the *dénouement*, when the positions will be changed; and while these haughty sisters sink into merited neglect, Science, proclaimed as highest alike in worth and beauty, will reign supreme.

THREE DRAMATIC ESSAYS

By John Dryden

(John Dryden, English poet and dramatist was born at Aldwinkle All Saints, Northamptonshire, in 1631, the son of a rector. Educated at Westminster and at Trinity College, Cambridge, he took his degree the year his father died. He went to London, where for a time it seems that he held a secretarial position. In 1659 his first work of consequence, "Heroic Stanzas on the Death of Oliver Cromwell", was published. But this work did not reveal his splendid powers and not until he began writing plays did he gain reputation. The strong, vigorous English of his poems, their satirical quality, gave Dryden a very high rank amongst English poets. His "Essay on Dramatic Poetry" is most valuable for its critical qualities and as a masterly piece of prose. His genius gave him an easy supremacy of his period. Johnson called him "the Father of English criticism", which seems a title that can hardly be argued. He died in 1700.)

THE DRAMATIC POETRY OF THE LAST AGE

DEFENCE OF THE EPILOGUE TO THE SECOND PART OF "THE CONQUEST OF
GRANADA"

They, who have best succeeded on the stage,
Have still conform'd their genius to their age.
Thus *Jonson* did mechanic humor show,
When men were dull, and conversation low.
Then, *Comedy* was faultless, but 'twas coarse:
Cobb's tankard was a jest, and *Otter's* horse.
And, as their *Comedy*, their love was mean;
Except, by chance, in some one labor'd scene,
Which must atone for an ill-written play:
They rose, but at their height could seldom stay.
Fame then was cheap, and the first comer sped;
And they have kept it since, by being dead.
But, were they now to write, when critics weigh
Each line, and ev'ry word, throughout a play,
None of them, no, not *Jonson* in his height,
Could pass, without allowing grains for weight.
Think it not envy, that these truths are told;
Our poet's not malicious, though he's bold.

'Tis not to brand 'em that their faults are shown,
 But, by their errors, to excuse his own.
 If *Love* and *Honor* now are higher rais'd,
 'Tis not the poet, but the age is prais'd.
 Wit's now arriv'd to a more high degree;
 Our native language more refin'd and free.
 Our ladies and our men now speak more wit
 In conversation, than those poets writ.
 Then, one of these is, consequently, true;
 That what this poet writes comes short of you,
 And imitates you ill (which most he fears),
 Or else his writing is not worse than theirs.
 Yet, though you judge (as sure the critics will),
 That some before him writ with greater skill,
 In this one praise he has their fame surpast,
 To please an age more gallant than the last.

THE promises of authors, that they will write again, are, in effect, a threatening of their readers with some new impertinence; and they who perform not what they promise, will have their pardon on easy terms. It is from this consideration that I could be glad to spare you the trouble, which I am now giving you, of a postscript, if I were not obliged, by many reasons, to write somewhat concerning our present plays, and those of our predecessors on the English stage. The truth is, I have so far engaged myself in a bold *Epilogue* to this play, wherein I have somewhat taxed the former writing, that it was necessary for me either not to print it, or to show that I could defend it. Yet I would so maintain my opinion of the present age, as not to be wanting in my veneration for the past: I would ascribe to dead authors their just praises in those things wherein they have excelled us; and in those wherein we contend with them for the pre-eminence, I would acknowledge our advantage to the age, and claim no victory from our wit. This being what I have proposed to myself, I hope I shall not be thought arrogant when I inquire into their errors. For we live in an age so sceptical, that as it determines little, so it takes nothing from antiquity on trust; and I profess to have no other ambition in this *Essay* than that poetry may not go backward, when all other arts and sciences are advancing. Whoever censures me for this inquiry, let him hear his character from Horace:

Ingeniis non ille favet, plauditque sepultis,
 Nostra sed impugnat; nos nostraque lividus odit.

He favours not dead wits, but hates the living.

It was upbraided to that excellent poet, that he was an enemy to

the writings of his predecessor Lucilius, because he had said, *Lucilium lutulentum fluere*, that he ran muddy; and that he ought to have retrenched from his satires many unnecessary verses. But Horace makes Lucilius himself to justify him from the imputation of envy, by telling you that he would have done the same, had he lived in an age which was more refined:

Si foret hoc nostrum fato delapsus in. aevum,
Deteret sibi multa, recideret omne quod ultra
Perfectum traheretur, etc.

And, both in the whole course of that satire, and in his most admirable *Epistle to Augustus*, he makes it his business to prove that antiquity alone is no plea for the excellency of a poem; but that, one age learning from another, the last (if we can suppose an equality of wit in the writers) has the advantage of knowing more and better than the former. And this, I think, is the state of the question in dispute. It is therefore my part to make it clear, that the language, wit, and conversation of our age are improved and refined above the last; and then it will not be difficult to infer that our plays have received some part of those advantages.

In the first place, therefore, it will be necessary to state, in general, what this refinement is, of which we treat; and that, I think, will not be defined amiss: An improvement of our Wit, Language, and Convention; or, an alteration in them for the better.

To begin with Language. That an alteration is lately made in ours, or since the writers of the last age (in which I comprehend Shakespeare, Fletcher, and Jonson), is manifest. Any man who reads those excellent poets, and compares their language with what is now written, will see it almost in every line; but that this is an improvement of the language, or an alteration for the better, will not so easily be granted. For many are of a contrary opinion, that the English tongue was then in the height of its perfection; that from Jonson's time to ours it has been in a continual declination, like that of the Romans from the age of Virgil to Statius, and so downward to Claudian; of which, not only Petronius, but Quintilian himself so much complains, under the person of Secundus, in his famous dialogue *de Causis corruptae Eloquentiae*.

But, to show that our language is improved, and that those people have not a just value for the age in which they live, let us consider in what the refinement of a language principally consists: that is, either in rejecting such old words, or phrases, which are ill sounding, or improper; or in admitting new, which are more proper, more sounding and more significant.

The reader will easily take notice, that when I speak of rejecting improper words and phrases, I mention not such as are antiquated by

custom only, and, as I may say, without any fault of theirs. For in this case the refinement can be but accidental; that is, when the words and phrases which are rejected happen to be improper. Neither would I be understood, when I speak of impropriety of language, either wholly to accuse the last age, or to excuse the present, and least of all myself; for all writers have their imperfections and failings: but I may safely conclude in the general, that our improprieties are less frequent and less gross than theirs. One testimony of this is undeniable, that we are the first who have observed them; and, certainly, to observe errors is a great step in the correcting of them. But, malice and partiality set apart, let any man who understands English, read diligently the works of Shakespeare and Fletcher, and I dare undertake that he will find in every page either some solecism of speech, or some notorious flaw in sense; and yet these men are revered, when we are not forgiven. That their wit is great, and many times their expressions noble, envy itself cannot deny:

Neque ego illis detrahere ausim
Haerentem capiti multâ cum laude coronam.

But the times were ignorant in which they lived. Poetry was then, if not in its infancy among us, at least not arrived to its vigour and maturity: witness the lameness of their plots; many of which, especially those which they writ first (for even that age refined itself in some measure), were made up of some ridiculous incoherent story, which in one play many times took up the business of an age. I suppose I need not name *Pericles*, *Prince of Tyre*, nor the historical plays of Shakespeare: besides many of the rest, as the *Winter's Tale*, *Love's Labour's Lost*, *Measure for Measure*, which were either grounded on impossibilities, or at least so meanly written, that the comedy neither caused your mirth, nor the serious part your concernment. If I would expatiate on this subject, I could easily demonstrate, that our admired Fletcher, who writ after him, neither understood correct plotting, nor that which they call *the decorum of the stage*. I would not search in his worst plays for examples: he who will consider his *Philaster*, his *Humorous Lieutenant*, his *Faithful Shepherdess*, and many others which I could name, will find them much below the applause which is now given them. He will see *Philaster* wounding his mistress, and afterwards his boy, to save himself; not to mention the Clown, who enters immediately, and not only has the advantage of the combat against the hero, but diverts you from your serious concernment with his ridiculous and absurd raillery. In his *Humorous Lieutenant*, you find his *Demetrius* and *Leontius* staying in the midst of a routed army, to hear the cold mirth of the Lieutenant: and *Demetrius* afterwards appearing with

a pistol in his hand, in the next age to Alexander the Great. And for his Shepherd, he falls twice into the former indecency of wounding women. But these absurdities, which those poets committed, may more properly be called the age's fault than theirs: for, besides the want of education and learning (which was their particular unhappiness), they wanted the benefit of converse: but of that I shall speak hereafter, in a place more proper for it. Their audiences knew no better; and therefore were satisfied with what they brought. Those, who call theirs *the Golden Age of Poetry*, have only this reason for it, that they were then content with acorns before they knew the use of bread, or that *αλις ὄρνος* was become a proverb. They had many who admired them, and few who blamed them; and certainly a severe critic is the greatest help to a good wit: he does the office of a friend, while he designs that of an enemy; and his malice keeps a poet within those bounds which the luxuriancy of his fancy would tempt him to overleap.

But it is not their plots which I meant principally to tax: I was speaking of their sense and language; and I dare almost challenge any man to show me a page together which is correct in both. As for Ben Jonson, I am loath to name him, because he is a most judicious writer; yet he very often falls into these errors: and I once more beg the reader's pardon for accusing him of them. Only let him consider, that I live in an age where my least faults are severely censured; and that I have no way left to extenuate my failings, but by showing as great in those whom we admire:

Cædimus, inque vicem præbemus crura sagittis.

I cast my eyes but by chance on *Catiline*; and in the three or four last pages found enough to conclude that Jonson writ not correctly:—

Let the long-hid seeds
Of treason, in thee, now shoot forth in deeds
Ranker than horror.

In reading some bombast speeches of Macbeth, which are not to be understood, he used to say that it was horror; and I am much afraid that this is so.

Thy parricide late on thy only son,
After his mother, to make empty way
For thy last wicked nuptials, worse than they
That blaze that act of thy incestuous life,
Which gained thee at once a daughter and a wife.

The sense is here extremely perplexed; and I doubt the word *they* is false grammar.

And be free
Not heaven itself from thy impiety.

A *synchysis*, or ill-placing of words, of which Tully so much complains in oratory.

The waves and dens of beasts could not receive
The bodies that those souls were frightened from.

The preposition in the end of the sentence; a common fault with him, and which I have but lately observed in my own writings.

What all the several ills, that visit earth,
Plague, famine, fire, could not reach unto,
The sword, nor surfeits, let thy fury do.

Here are both the former faults: for, besides that the preposition unto is placed last in the verse, and at the half period, and is redundant, there is the former *synchysis* in the words the sword, nor surfeits, which in construction ought to have been placed before the other.

Catiline says of Cethegus, that for his sake he would

Go on upon the Gods, kiss lightning, wrest
The engine from the Cyclops, and give fire
At face of a full cloud, and stand his ire.

To go on upon, is only to go on twice. To give fire at face of a full cloud, was not understood in his own time: and stand his ire, besides the antiquated word ire, there is the article his, which makes false construction: and giving fire at the face of a cloud, is a perfect image of shooting, however it came to be known in those days to Catiline.

Others there are,
Whom envy to the state draws and pulls on,
For contumelies received; and such are sure ones.

Ones, in the plural number: but that is frequent with him: for he says, not long after,

Cæsar and Crassus, if they be ill men,
Are mighty ones—
Such men, they do not succour more the cause, etc.

They redundant.

Though Heaven should speak with all his wrath at once,
We should stand upright and unfeared.

His is ill syntax with Heaven; and by unfeared he mean unafraid: words of quite a contrary signification.

The ports are open.

He perpetually uses ports for gates; which is an affected error in him, to introduce Latin by the loss of the English idiom; as in the translation of Tully's speeches he usually does.

Well-placing of words, for the sweetness of pronunciation, was not known till Mr. Waller introduced it; and, therefore, it is not to be wondered if Ben Jonson has many such lines as these:

But being bred up in his father's needy fortunes; brought up in's sister's prostitution, etc.

But meanness of expression one would think not to be his error in a tragedy, which ought to be more high and sounding than any other kind of poetry; and yet, amongst others in *Cataline*, I find these four lines together:

So Asia, thou are cruelly even
With us, for all the blows thee given;
When we, whose virtues conquered thee,
Thus by thy vices ruin'd be.

Be there is false English for are; though the rhyme hides it.

But I am willing to close the book, partly out of veneration to the author, partly out of weariness to pursue an argument which is so fruitful, in so small a compass. And what correctness, after this, can be expected from Shakspeare or from Fletcher, who wanted that learning and care which Jonson had? I will, therefore, spare my own trouble of inquiring into their faults; who, had they lived now, had doubtless written more correctly. I suppose it will be enough for me to affirm (as I think I safely may), that these, and the like errors, which I taxed in the most correct of the last age, are such into which we do not ordinarily fall. I think few of our present writers would have left behind them such a line as this:

Contain your spirit in more stricter bounds.

But that gross way of two comparatives was then ordinary: and, therefore, more pardonable in Jonson.

As for the other part of refining, which consists in receiving new words and phrases, I shall not insist much on it. It is obvious that we have admitted many, some of which we wanted, and therefore our language is the richer for them, as it would be by importation of bullion: others are rather ornamental than necessary; yet by their admission, the language is become more courtly, and our thoughts are better dressed. These are to be found scattered in the writers of our age, and it is not my business to collect them. They, who have lately written with most care, have, I believe, taken the rule of Horace for their guide; that is, not to be too hasty in

receiving of words, but rather to stay till custom has made them familiar to us:

Quem penes arbitrium est, et jus, et norma loquendi.

For I cannot approve of their way of refining, who corrupt our English idiom by mixing it too much with French: that is a sophistication of language, not an improvement of it; a turning English into French, rather than a refining of English by French. We meet daily with those fops who value themselves on their travelling, and pretend they cannot express their meaning in English, because they would put off to us some French phrase of the last edition; without considering that, for aught they know, we have a better of our own. But these are not the men who are to refine us; their talent is to prescribe fashions, not words: at best, they are only serviceable to a writer, so as Ennius was to Virgil. He may *aurum ex stercore colligere*: for 'tis hard if, amongst many insignificant phrases, there happen not something worth preserving; though they themselves, like Indians, know not the value of their own commodity.

There is yet another way of improving language, which poets especially have practised in all ages; that is, by applying received words to a new signification; and this, I believe, is meant by Horace, in that precept which is so variously construed by expositors:

Dixeris egregie, notum si callida verbum
Reddiderit junctura novum.

And, in this way, he himself had a particular happiness; using all the tropes, and particular metaphors, with that grace which is observable in his Odes, where the beauty of expression is often greater than that of thought; as, in that one example, amongst an infinite number of others, *Et vultus nimium lubricus aspicit*.

And therefore, though he innovated little, he may justly be called a great refiner of the Roman tongue. This choice of words, and heightening of their natural signification, was observed in him by the writers of the following ages; for Petronius says of him, *et Horatii curiosa felicitas*. By this grafting, as I may call it, on old words, has our tongue been beautified by the three fore-mentioned poets, Shakspeare, Fletcher, and Jonson, whose excellencies I can never enough admire; and in this they have been followed, especially by Sir John Suckling and Mr. Waller, who refined upon them. Neither have they, who succeeded them, been wanting in their endeavors to adorn our mother tongue: but it is not so lawful for me to praise my living contemporaries, as to admire my dead predecessors.

I should now speak of the refinement of Wit; but I have been so large on the former subject, that I am forced to contract myself

in this. I will therefore only observe to you, that the wit of the last age was yet more incorrect than their language. Shakspeare, who many times has written better than any poet, in any language, is yet so far from writing wit always, or expressing that wit according to the dignity of the subject, that he writes, in many places, below the dullest writer of ours, or any precedent age. Never did any author precipitate himself from such height of thought to so low expressions, as he often does. He is the very Janus of poets; he wears almost everywhere two faces; and you have score begun to admire the one, ere you despise the other. Neither is the luxuriance of Fletcher (which his friends have taxed in him) a less fault than the carelessness of Shakspeare. He does not well always; and, when he does, he is a true Englishman; he knows not when to give over. If he wakes in one scene, he commonly slumbers in another; and, if he pleases you in the first three acts, he is frequently so tired with his labor, that he goes heavily in the fourth, and sinks under his burden in the fifth.

For Ben Jonson, the most judicious of poets, he always writ properly, and as the character required; and I will not contest farther with my friends who call that wit: it being very certain, that even folly itself, well represented, is wit in a larger signification; and that there is fancy, as well as judgment, in it, though not so much or noble: because all poetry being imitation, that of folly is a lower exercise of fancy, though perhaps as difficult as the other; for 'tis a kind of looking downward in the poet, and representing that part of mankind which is below him.

In these low characters of vice and folly lay the excellency of that inimitable writer; who, when at any time he aimed at wit in the stricter sense, that is, sharpness of conceit, was forced either to borrow from the Ancients, as to my knowledge he did very much from Plautus; or, when he trusted himself alone, often fell into meanness of expression. Nay, he was not free from the lowest and most grovelling kind of wit, which we call clenches, of which Every Man in his Humour is infinitely full; and, which is worse, the wittiest persons in the drama speak them. His other comedies are not exempt from them. Will you give me leave to name some few? Asper, in which character he personates himself (and he neither was nor thought himself a fool), exclaiming against the ignorant judges of the age, speaks thus:

How monstrous and detested is't, to see
A fellow, that has neither art nor brain,
Sit like an *Aristarchus*, or *stark-ass*,
Taking men's lines, with a *tobacco face*,
In *snuff*, etc.

And presently after: I mar'le whose wit 'twas to put a prologue beyond Sackbut's mouth. They might well think he would be out of tune, and yet you'd play upon him too.—Will you have another of the same stamp? O, I cannot abide these limbs of sattin, or rather Satan.

But, it may be, you will object that this was Asper, Macilente, or Carlo Buffone: you shall, therefore, hear him speak in his own person, and that in the two last lines or sting of an epigram. 'Tis inscribed to Fine Grand, who, he says, was indebted to him for many things which he reckons there; and concludes thus:

Forty things more, dear *Grand*, which you know true,
For which, or pay me quickly, or I'll pay you.

This was then the mode of wit, the vice of the age, and not Ben Jonson's; for you see, a little before him, that admirable wit, Sir Philip Sidney, perpetually playing with his words. In his time, I believe, it ascended first into the pulpit, where (if you will give me leave to clench too) it yet finds the benefit of its clergy; for they are commonly the first corrupters of eloquence, and the last reformed from vicious oratory; as a famous Italian has observed before me, in his *Treatise of the Corruption of the Italian Tongue*; which he principally ascribes to priests and preaching friars.

But, to conclude with what brevity I can, I will only add this, in defence of our present writers, that, if they reach not some excellencies of Ben Jonson (which no age, I am confident, ever shall), yet, at least, they are above that meanness of thought which I have taxed, and which is frequent in him.

That the wit of this age is much more courtly, may easily be proved by viewing the characters of gentlemen which were written in the last. First, for Jonson:—Truewit, in the *Silent Woman*, was his masterpiece; and Truewit was a scholar-like kind of man, a gentleman with an alloy of pedantry, a man who seems mortified to the world by much reading. The best of his discourse is drawn, not from the knowledge of the town, but books; and, in short, he would be a fine gentleman in an university. Shakspeare showed the best of his skill in his Mercutio; and he said himself, that he was forced to kill him in the third act to prevent being killed by him. But, for my part, I cannot find he was so dangerous a person: I see nothing in him but what was so exceeding harmless, that he might have lived to the end of the play, and died in his bed, without offence to any man.

Fletcher's Don John is our only bugbear; and yet I may affirm, without suspicion of flattery, that he now speaks better, and that his character is maintained with much more vigor in the fourth and fifth acts, than it was by Fletcher in the three former. I have always

acknowledged the wit of our predecessors, with all the veneration which becomes me; but, I am sure, their wit was not that of gentlemen; there was ever somewhat that was ill-bred and clownish in it, and which confessed the conversation of the authors.

And this leads me to the last and greatest advantage of our writing, which proceeds from *conversation*. In the age wherein those poets lived, there was less of gallantry than in ours; neither did they keep the best company of theirs. Their fortune has been much like that of Epicurus, in the retirement of his gardens; to live almost unknown, and to be celebrated after their decease. I cannot find that any of them had been conversant in courts, except Ben Jonson; and his genius lay not so much that way as to make an improvement by it. Greatness was not then so easy of access, nor conversation so free, as now it is. I cannot, therefore, conceive it any insolence to affirm that, by the knowledge and pattern of their wit who writ before us, and by the advantage of our own conversation, the discourse and raillery of our comedies excel what has been written by them. And this will be denied by none, but some few old fellows who value themselves on their acquaintance with the Black Friars; who, because they saw their plays, would pretend a right to judge ours. The memory of these grave gentlemen is their only plea for being wits. They can tell a story of Ben Jonson, and, perhaps, have had fancy enough to give a supper in the Apollo, that they might be called his sons; and, because they were drawn in to be laughed at in those times, they think themselves now sufficiently entitled to laugh at ours. Learning I never saw in any of them; and wit no more than they could remember. In short, they were unlucky to have been bred in an unpolished age, and more unlucky to live to a refined one. They have lasted beyond their own, and are cast behind ours; and not contented to have known little at the age of twenty, they boast of their ignorance at threescore.

Now, if they ask me, whence it is that our conversation is so much refined? I must freely, and without flattery, ascribe it to the court; and, in it, particularly to the King, whose example gives a law to it. His own misfortunes, and the nation's, afforded him an opportunity, which is rarely allowed to sovereign princes, I mean of travelling, and being conversant in the most polished courts of Europe; and, thereby, of cultivating a spirit which was formed by nature to receive the impressions of a gallant and generous education. At his return, he found a nation lost as much in barbarism as in rebellion; and, as the excellency of his nature forgave the one, so the excellency of his manners reformed the other. The desire of imitating so great a pattern first awakened the dull and heavy spirits of the English from their natural reservedness; loosened them from their stiff forms of conversation, and made them easy and pliant to each

other in discourse. Thus, insensibly, our way of living became more free; and the fire of the English wit, which was before stifled under a constrained, melancholy way of breeding, began first to display its force, by mixing the solidity of our nation with the air and gaiety of our neighbors. This being granted to be true, it would be a wonder if the poets, whose work is imitation, should be the only persons in three kingdoms who should not receive advantage by it; or, if they should not more easily imitate the wit and conversation of the present age than of the past.

Let us therefore admire the beauties and the heights of Shakspeare, without falling after him into a carelessness, and, as I may call it, a lethargy of thought, for whole scenes together. Let us imitate, as we are able, the quickness and easiness of Fletcher, without proposing him as a pattern to us, either in the redundancy of his matter, or the incorrectness of his language. Let us admire his wit and sharpness of conceit; but let us at the same time acknowledge that it was seldom so fixed, and made proper to his character, as that the same things might not be spoken by any person in the play. Let us applaud his scenes of love; but let us confess that he understood not either greatness or perfect honor in the parts of any of his women. In fine, let us allow that he had so much fancy, as when he pleased he could write wit; but that he wanted so much judgment, as seldom to have written humor, or described a pleasant folly. Let us ascribe to Jonson the height and accuracy of judgment in the ordering of his plots, his choice of characters, and maintaining what he had chosen to the end. But let us not think him a perfect pattern of imitation, except it be in humor; for love, which is the foundation of all comedies in other languages, is scarcely mentioned in any of his plays; and for humor itself, the poets of this age will be more wary than to imitate the meanness of his persons. Gentlemen will now be entertained with the follies of each other; and, though they allow Cobb and Tib to speak properly, yet they are not much pleased with their tankard or with their rags. And surely their conversation can be no jest to them on the theatre, when they would avoid it in the street.

To conclude all, let us render to our predecessors what is their due, without confining ourselves to a servile imitation of all they writ; and, without assuming to ourselves the title of better poets, let us ascribe to the gallantry and civility of our age the advantage which we have above them, and to our knowledge of the customs and manner of it the happiness we have to please beyond them.

HEROIC POETRY AND POETIC LICENCE

THE AUTHOR'S APOLOGY PREFIXED TO "THE STATE OF INNOCENCE AND
FALL OF MAN," AN OPERA (1677)

To satisfy the curiosity of those who will give themselves the trouble of reading the ensuing poem, I think myself obliged to render them a reason why I publish an opera which was never acted. In the first place, I shall not be ashamed to own that my chiefest motive was the ambition which I acknowledged in the Epistle. I was desirous to lay at the feet of so beautiful and excellent a Princess a work which, I confess, was unworthy her, but which, I hope, she will have the goodness to forgive. I was also induced to it in my own defence; many hundred copies of it being dispersed abroad without my knowledge or consent: so that every one gathering new faults, it became at length a libel against me; and I saw, with some disdain, more nonsense than either I, or as bad a poet, could have crammed into it at a month's warning; in which time 'twas wholly written, and not since revised. After this, I cannot, without injury to the deceased author of *Paradise Lost*, but acknowledge that this poem has received its entire foundation, part of the design, and many of the ornaments, from him. What I have borrowed will be so easily discerned from my mean productions, that I shall not need to point the reader to the places: and truly I should be sorry, for my own sake, that any one should take the pains to compare them together; the original being undoubtedly one of the greatest, most noble, and most sublime poems which either this age or nation has produced. And though I could not refuse the partiality of my friend, who is pleased to commend me in his verses, I hope they will rather be esteemed the effect of his love to me, than of his deliberate and sober judgment. His genius is able to make beautiful what he pleases: yet, as he has been too favorable to me, I doubt not but he will hear of his kindness from many of our contemporaries; for we are fallen into an age of illiterate, censorious, and detracting people, who, thus qualified, set up for critics.

In the first place, I must take leave to tell them, that they wholly mistake the nature of criticism who think its business is principally

to find fault. Criticism, as it was first instituted by Aristotle, was meant a standard of judging well; the chiefest part of which is, to observe those excellencies which should delight a reasonable reader. If the design, the conduct, the thoughts, and the expressions of a poem, be generally such as proceed from a true genius of Poetry, the critic ought to pass his judgment in favor of the author. 'Tis malicious and unmanly to snarl at the little lapses of a pen, from which Virgil himself stands not exempted. Horace acknowledges that honest Homer nods sometimes: he is not equally awake in every line; but he leaves it also as a standing measure for our judgments,

Non, ubi plura nitent in carmine, paucis
Offendi maculis, quas aut incuria fudit,
Aut humana parum cavit natura. . . .

And Longinus, who was undoubtedly, after Aristotle, the greatest critic amongst the Greeks, in his twenty-seventh chapter ΠΕΡΙ ΤΥΧΗΣ, has judiciously preferred the sublime genius that sometimes errs, to the middling or indifferent one, which makes few faults, but seldom or never rises to any excellence. He compares the first to a man of large possessions, who has not leisure to consider of every slight expense, will not debase himself to the management of every trifle: particular sums are not laid out, or spared, to the greatest advantage in his economy; but are sometimes suffered to run to waste, while he is only careful of the main. On the other side, he likens the mediocrity of wit to one of a mean fortune, who manages his store with extreme frugality, or rather parsimony; but who, with fear of running into profuseness, never arrives to the magnificence of living. This kind of genius writes indeed correctly. A wary man he is in grammar, very nice as to solecism or barbarism, judges to a hair of little decencies, knows better than any man what is not to be written, and never hazards himself so far as to fall, but plods on deliberately, and, as a grave man ought, is sure to put his staff before him; in short, he sets his heart upon it, and with wonderful care makes his business sure; that is, in plain English, neither to be blamed nor praised.—I could, says my author, find out some blemishes in Homer; and am perhaps as naturally inclined to be disgusted at a fault as another man; but, after all, to speak impartially, his failings are such as are only marks of human frailty: they are little mistakes, or rather negligences, which have escaped his pen in the fervour of his writing; the sublimity of his spirit carries it with me against his carelessness; and though Apollonius his *Argonauts*, and Theocritus his *Eidullia*, are more free from errors, there is not any man of so false a judgment who would choose rather to have been Apollonius or Theocritus than Homer.

'Tis worth our consideration a little, to examine how much these

hypercritics of English poetry differ from the opinion of the Greek and Latin judges of antiquity; from the Italians and French, who have succeeded them; and, indeed, from the general taste and approbation of all ages. Heroic Poetry, which they condemn, has ever been esteemed, and ever will be, the greatest work of human nature: in that rank has Aristotle placed it; and Longinus is so full of the like expression, that he abundantly confirms the other's testimony. Horace as plainly delivers his opinion, and particularly praises Homer in these verses—

Trojani Belli scriptorem, maxime Lolli,
Dum tu declamas Romanæ, Praeneste relegi:
Qui quid sit pulchrum, quid turpe, quid utile, quid non,
Plenius ac melius Chrysippo et Crantore dicit.

And in another place, modestly excluding himself from the number of poets, because he only writ odes and satires, he tells you a poet is such an one,

cui mens diviniior, atque os
Magna sonaturum.

Quotations are superfluous in an established truth; otherwise I could reckon up, amongst the moderns, all the Italian commentators on Aristotle's book of poetry; and, amongst the French, the greatest of this age, Boileau and Rapin; the latter of which is alone sufficient, were all other critics lost, to teach anew the rules of writing. Any man who will seriously consider the nature of an Epic Poem, how it agrees with that of Poetry in general, which is to instruct and to delight, what actions it describes, and what persons they are chiefly whom it informs, will find it a work which indeed is full of difficulty in the attempt, but admirable when it is well performed. I write not this with the least intention to undervalue the other parts of poetry: for Comedy is both excellently instructive, and extremely pleasant; satire lashes vice into reformation, and humor represents folly so as to render it ridiculous. Many of our present writers are eminent in both these kinds; and, particularly, the author of the *Plain Dealer*, whom I am proud to call my friend, has obliged all honest and virtuous men, by one of the most bold, most general, and most useful satires which has ever been presented on the English theatre. I do not dispute the preference of Tragedy: let every man enjoy his taste: but 'tis unjust that they, who have not the least notion of heroic writing, should therefore condemn the pleasure which others receive from it, because they cannot comprehend it. Let them please their appetites in eating what they like; but let them not force their dish on all the table. They who would combat general authority with particular opinion, must first

establish themselves a reputation of understanding better than other men. Are all the flights of Heroic Poetry to be concluded bombast, unnatural, and mere madness, because they are not affected with their excellencies? It is just as reasonable as to conclude there is no day, because a blind man cannot distinguish of light and colors. Ought they not rather, in modesty, to doubt of their own judgments, when they think this or that expression in Homer, Virgil, Tasso, or Milton's *Paradise* to be too far strained, than positively to conclude that 'tis all fustian, and mere nonsense? 'Tis true, there are limits to be set betwixt the boldness and rashness of a poet; but he must understand those limits who pretends to judge as well as he who undertakes to write: and he who has no liking to the whole, ought, in reason, to be excluded from censuring of the parts. He must be a lawyer before he mounts the tribunal; and the judicature of one court, too, does not qualify a man to preside in another. He may be an excellent pleader in the Chancery who is not fit to rule the Common Pleas. But I will presume for once to tell them, that the boldest stroke of poetry, when they are managed artfully, are those which most delight the reader.

Virgil and Horace, the severest writers of the severest age, have made frequent use of the hardest metaphors, and of the strongest hyperboles; and in this case the best authority is the best argument; for generally to have pleased, and through all ages, must bear the force of universal tradition. And if you would appeal from thence to right reason, you will gain no more by it in effect, than, first, to set up your reason against those authors; and, secondly, against all those who have admired them. You must prove why that ought not to have pleased, which has pleased the most learned, and the most judicious; and, to be thought knowing, you must first put the fool upon all mankind. If you can enter more deeply than they have done into the causes and resorts of that which moves pleasure in a reader, the field is open, you may be heard: but those 'springs of human nature are not so easily discovered by every superficial judge: it requires Philosophy, as well as Poetry, to sound the depth of all the passions; what they are in themselves, and how they are to be provoked: and in this science the best poets have excelled. Aristotle raised the fabric of his *Poetry* from observation of those things in which Euripides, Sophocles, and Æschylus pleased: he considered how they raised the passions, and thence has drawn rules for our imitation. From hence have sprung the tropes and figures, for which they wanted a name, who first practised them, and succeeded in them. Thus I grant you that the knowledge of nature was the original rule; and that all poets ought to study her, as well as Aristotle and Horace, her interpreters. But then this also undeniably follows, that those things which delight all ages, must have been an

imitation of Nature; which is all I contend. Therefore is Rhetoric made an art; therefore the names of so many tropes and figures were invented; because it was observed they had such and such effect upon the audience. Therefore catachreses and hyperboles have found their place amongst them; not that they were to be avoided, but to be used judiciously, and placed in poetry, as heightenings and shadows are in painting, to make the figure bolder, and cause it to stand off to sight.

Nec retia cervis
Ulla dolum meditantur

18

says Virgil in his Eclogues: and speaking of Leander, in his Georgics,

Nocte natat cæca, serus freta, quem super ingens
Porta tonat coeli, et scopulis illisa reclamant
Æquora.

In both of these, you see, he fears not to give voice and thought to things inanimate.

Will you arraign your master, Horace, for his hardness of expression, when he describes the death of Cleopatra, and says she did *asperos tractare serpentes, ut atrum corpore combiberet venenum*, because the body, in that action, performs what is proper to the mouth?

As for hyperboles, I will neither quote Lucan, nor Statius, men of an unbounded imagination, but who often wanted the poise of judgment. The divine Virgil was not liable to that exception; and yet he describes Polyphemus thus—

Graditurque per æquor
Jam medium; necdum fluctus latera ardua tinxit.

In imitation of this place, our admirable Cowley thus paints Goliath—

The valley, now, this monster seem'd to fill;
And we, methought, look'd up to him from our hill:

where the two words, seemed and methought, have mollified the figure; and yet if they had not been there, the fright of the Israelites might have excused their belief of the giant's stature.

In the eighth of the Æneids, Virgil paints the swiftness of Camilla thus:

Illæ vel intactæ segetis per summa volaret
Gramina, nec teneras cursu læsisset aristas;
Vel mare per medium, fluctu suspensa tumentis,
Ferret iter, celeres nec tingeret æquore plantas.

You are not obliged, as in History, to a literal belief of what the poet says; but you are pleased with the image, without being cozened by the fiction.

Yet even in History, Longinus quotes Herodotus on this occasion of hyperboles. The Lacedemonians, says he, at the straits of Thermopylæ, defended themselves to the last extremity; and when their arms failed them, fought it out with their nails and teeth; till at length (the Persians shooting continually upon them) they lay buried under the arrows of their enemies. It is not reasonable (continues the critic) to believe that men could defend themselves with their nails and teeth from an armed multitude; nor that they lay buried under a pile of darts and arrows; and yet there wants not probability for the figure: because the hyperbole seems not to have been made for the sake of the description, but rather to have been produced from the occasion.

'Tis true, the boldness of the figures is to be hidden sometimes by the address of the poet; that they may work their effect upon the mind, without discovering the art which caused it. And therefore they are principally to be used in passion; when we speak more warmly and with more precipitation than at other times: for then, *si vis me flere, dolendum est primum ipsi tibi*; the poet must put on the passion he endeavors to represent: a man in such an occasion is not cool enough, either to reason rightly, or to talk calmly. Aggravations are then in their proper places; interrogations, exclamations, hyperbata, or a disordered connection of discourse, are graceful there, because they are natural. The sum of all depends on what before I hinted, that this boldness of expression is not to be blamed, if it be managed by the coolness and discretion which is necessary to a poet.

Yet before I leave this subject, I cannot but take notice how disingenuous our adversaries appear: all that is dull, insipid, languishing, and without sinews, in a poem, they call an imitation of Nature: they only offend our most equitable judges who think beyond them; and lively images and elocution are never to be forgiven.

What fustian, as they call it, have I heard these gentlemen find out in Mr. Cowley's Odes! I acknowledge myself unworthy to defend so excellent an author, neither have I room to do it here; only in general I will say, that nothing can appear more beautiful to me than the strength of those images which they condemn.

Imaging is, in itself, the very height and life of Poetry. It is, as Longinus describes it, a discourse, which, by a kind of enthusiasm, or extraordinary emotion of the soul, makes it seem to us that we behold those things which the poet paints, so as to be pleased with them, and to admire them.

If poetry be imitation, that part of it must needs be best which

describes most lively our actions and passions; our virtues and our vices; our follies and our humors: for neither is Comedy without its part of imaging; and they who do it best are certainly the most excellent in their kind. This is too plainly proved to be denied. But how are poetical fictions, how are hippocentaurs and chimeras, or how are angels and immaterial substances to be imaged; which, some of them, are things quite out of nature; others, such whereof we can have no notion? This is the last refuge of our adversaries; and more than any of them have yet had the wit to object against us. The answer is easy to the first part of it: the fiction of some beings which are not in nature (second notions, as the logicians call them) has been founded on the conjunction of two natures, which have a real separate being. So hippocentaurs were imaged by joining the natures of a man and horse together; as Lucretius tells us, who has used this word of image oftener than any of the poets—

Nam certe ex vivo centauri non fit imago,
Nulla fuit quoniam talis natura animai:
Verum ubi equi atque hominis, casu, convenit imago,
Hærescit facile extemplo, etc.

The same reason may also be alleged for chimeras and the rest. And poets may be allowed the like liberty for describing things which really exist not, if they are founded on popular belief. Of this nature are fairies, pigmies, and the extraordinary effects of magic; for 'tis still an imitation, though of other men's fancies: and thus are Shakspeare's *Tempest*, his *Midsummer Night's Dream*, and Ben Jonson's *Masque of Witches* to be defended. For immaterial substances, we are authorized by Scripture in their description: and herein the text accommodates itself to vulgar apprehension, in giving angels the likeness of beautiful young men. Thus, after the pagan divinity, has Homer drawn his gods with human faces: and thus we have notions of things above us, by describing them like other beings more within our knowledge.

I wish I could produce any one example of excellent imaging in all this poem. Perhaps I cannot; but that which comes nearest it is in these four lines, which have been sufficiently canvassed by my well-natured censors—

Seraph and cherub, careless of their charge,
And wanton, in full ease now live at large:
Unguarded leave the passes of the sky,
And all dissolved in hallelujahs lie.

I have heard (says one of them) of anchovies dissolved in sauce;

but never of an angel in hallelujahs. A mighty witticism! (if you will pardon a new word), but there is some difference between a laughter and a critic. He might have burlesqued Virgil too, from whom I took the image: *Invadunt urbem, somno vinoque sepultam*. A city's being buried, is just as proper on occasion, as an angel's being dissolved in ease, and songs of triumph. Mr. Cowley lies as open, too, in many places—

Where their vast courts the mother waters keep, etc.

For if the mass of waters be the mothers, then their daughters, the little streams, are bound, in all good manners, to make courtesy to them, and ask them blessing. How easy 'tis to turn into ridicule the best descriptions, when once a man is in the humor of laughing, till he wheezes at his own dull jest! But an image, which is strongly and beautifully set before the eyes of the reader, will still be poetry when the merry fit is over, and last when the other is forgotten.

I promised to say somewhat of Poetic Licence, but have in part anticipated my discourse already. Poetic Licence I take to be the liberty which poets have assumed to themselves, in all ages, of speaking things in verse, which are beyond the severity of prose. 'Tis that particular character which distinguishes and sets the bounds betwixt *oratio soluta* and poetry. This, as to what regards the thought or imagination of a poet, consists in fiction: but then those thoughts must be expressed; and here arise two other branches of it; for if this licence be included in a single word, it admits of tropes; if in a sentence or proposition, of figures; both which are of a much larger extent, and more forcibly to be used in verse than prose. This is that birthright which is derived to us from our great forefathers, even from Homer down to Ben; and they who would deny it to us, in plain terms, the fox's quarrel to the grapes—they cannot reach it.

How far these liberties are to be extended, I will not presume to determine here, since Horace does not. But it is certain that they are to be varied, according to the language and age in which an author writes. That which would be allowed to a Grecian poet, Martial tells you, would not be suffered in a Roman. And 'tis evident that the English does more nearly follow the strictness of the latter than the freedoms of the former. Connection of epithets, or the conjunction of two words in one, are frequent and elegant in the Greek, which yet Sir Philip Sidney, and the translator of Du Bartas, have unluckily attempted in the English; though this, I confess, is not so proper an instance of poetic licence as it is of variety of idiom in languages.

Horace a little explains himself on this subject of *Licentia Poetica*, in these verses—

Pictoribus atque Poetis

Quidlibet audendi semper fuit æqua potestas: . . .

Sed non, ut placidis coeant immitia, non ut

Serpentes avibus gementur, tigribus hædi.

He would have a poem of a piece; not to begin with one thing and end with another; he restrains it so far that thoughts of an unlike nature ought not to be joined together. That were indeed to make a chaos. He taxed not Homer, nor the divine Virgil, for interesting their gods in the wars of Troy and Italy; neither, had he now lived, would he have taxed Milton, as our false critics have presumed to do, for his choice of a supernatural argument; but he would have blamed my author, who was a Christian, had he introduced into his poem heathen deities, as Tasso is condemned by Rapin on the like occasion; and as Camoens, the author of the *Lusiads*, ought to be censured by all his readers, when he brings in Bacchus and Christ into the same adventure of his fable.

From that which has been said, it may be collected, that the definition of Wit (which has been so often attempted, and ever unsuccessfully by many poets) is only this: that it is a propriety of thoughts and words; or, in other terms, thoughts and words elegantly adapted to the subject. If our critics will join issue on this definition, that we may *convenire in aliquo tertio*; if they will take it as a granted principle, it will be easy to put an end to this dispute. No man will disagree from another's judgment concerning the dignity of style in Heroic Poetry; but all reasonable men will conclude it necessary, that sublime subjects ought to be adorned with the sublimest, and consequently often with the most figurative expressions. In the meantime I will not run into their fault of imposing my opinions on other men, any more than I would my writings on their taste: I have only laid down, and that superficially enough, my present thoughts; and shall be glad to be taught better by those who pretend to reform our Poetry.

MUSICAL DRAMA

THE PREFACE TO ALBION AND "ALBANIUS," AN OPERA
(1685)

IF Wit has truly been defined, "a propriety of thoughts and words," then that definition will extend to all sorts of Poetry: and, among the rest, to this present entertainment of an opera. Propriety of thought is that fancy which arises naturally from the subject, or which the poet adapts to it. Propriety of words is the clothing of those thoughts with such expressions as are naturally proper to them; and from both these, if they are judiciously performed, the delight of poetry results. An opera is a poetical tale, or fiction, represented by vocal and instrumental music, adorned with scenes, machines, and dancing. The supposed persons of this musical drama are generally supernatural, as gods, and goddesses, and heroes, which at least are descended from them, and are in due time to be adopted into their number. The subject, therefore, being extended beyond the limits of human nature, admits of that sort of marvellous and surprising conduct which is rejected in other plays. Human impossibilities are to be received as they are in faith; because, where gods are introduced, a supreme power is to be understood, and second causes are out of doors. Yet propriety is to be observed even here. The gods are all to manage their peculiar provinces; and what was attributed by the heathens to one power ought not to be performed by any other. Phœbus must foretell, Mercury must charm with his caduceus, and Juno must reconcile the quarrels of the marriage-bed. To conclude, they must all act according to their distinct and peculiar characters. If the persons represented were to speak upon the stage, it would follow, of necessity, that the expressions should be lofty, figurative, and majestic, but the nature of an opera denies the frequent use of these poetical ornaments; for vocal music, though it often admits a loftiness of sound, yet always exacts an harmonious sweetness; or, to distinguish yet more justly, the recitative part of the opera requires a more masculine beauty of expression and sound; the other, which, for want of a proper English word, I must call the *songish part*, must abound in the softness and variety of numbers; its principal intention being to please hear-

ing rather than to gratify the understanding. It appears, indeed, preposterous at first sight, that rhyme, on any consideration, should take place of reason; but, in order to resolve the problem, this fundamental proposition must be settled, that the first inventors of any art or science, provided they have brought it to perfection, are, in reason, to give laws to it; and, according to their model, all after-undertakers are to build. Thus, in Epic Poetry, no man ought to dispute the authority of Homer, who gave the first being to that masterpiece of art, and endued it with that form of perfection in all its parts that nothing was wanting to its excellency. Virgil therefore, and those very few who have succeeded him, endeavored not to introduce, or innovate, anything in a design already perfected, but imitated the plan of the inventor; and are only so far true heroic poets as they have built on the foundations of Homer. Thus, Pindar, the author of those Odes which are so admirably restored by Mr. Cowley in our language, ought for ever to be the standard of them; and we are bound, according to the practice of Horace and Mr. Cowley, to copy him. Now, to apply this axiom to our present purpose, whosoever undertakes the writing of an opera (which is a modern invention, though built indeed on the foundation of ethnic worship), is obliged to imitate the design of the Italians, who have not yet invented, but brought to perfection, this sort of dramatic musical entertainment. I have not been able, by any search, to get any light, either of the time when it began, or of the first author. But I have probable reasons, which induce me to believe that some Italians, having curiously observed the gallantries of the Spanish Moors, at their *zambras*, or royal feasts, where music, songs, and dancing were in perfection, together with their machines, which are usual at their *sortijas*, or running at the ring, and other solemnities, may possibly have refined upon those Moresque divertisements, and produced this delightful entertainment, by leaving out the warlike part of the carousels, and forming a poetical design for the use of the machines, the songs, and dances. But however it began (for this is only conjectural), we know that, for some centuries, the knowledge of Music has flourished principally in Italy, the mother of learning and of arts; that Poetry and Painting have been there restored and so cultivated by Italian masters that all Europe has been enriched out of their treasury; and the other parts of it, in relation to those delightful arts, are still as much provincial to Italy as they were in the time of the Roman empire. Their first operas seem to have been intended for the celebration of the marriages of their princes, or for the magnificence of some general time of joy; accordingly, the expenses of them were from the purse of the sovereign, or of the republic, as they are still practised at Venice, Rome,

and at other places, at their carnivals. Savoy and Florence have often used them in their courts, at the weddings of their dukes; and at Turin particularly, was performed the *Pastor Fido*, written by the famous Guarini, which is a pastoral opera made to solemnize the marriage of a Duke of Savoy. The prologue of it has given the design to all the French; which is a compliment to the sovereign power by some god or goddess; so that it looks no less than a kind of embassy from heaven to earth. I said in the beginning of this preface that the persons represented in operas are generally gods, goddesses, and heroes descended from them, who are supposed to be their peculiar care; which hinders not but that meaner persons may sometimes gracefully be introduced, especially if they have relation to those first times, which poets call the Golden Age; wherein, by reason of their innocence, those happy mortals were supposed to have had a more familiar intercourse with superior beings; and therefore shepherds might reasonably be admitted, as of all callings the most innocent, the most happy, and who by reason of the spare time they had, in their almost idle employment, had most leisure to make verses, and to be in love; without somewhat of which passion no opera can possibly subsist.

It is almost needless to speak anything of that noble language in which this musical drama was first invented and performed. All who are conversant in the Italian cannot but observe that it is the softest, the sweetest, the most harmonious, not only of any modern tongue, but even beyond any of the learned. It seems indeed to have been invented for the sake of Poetry and Music; the vowels are so abounding in all words, especially in terminations of them, that, excepting few monosyllables, the whole language ends in them. Then the pronunciation is so manly, and so sonorous, that their very speaking has more of music in it than Dutch poetry and song. It has withal derived so much copiousness and eloquence from the Greek and Latin, in the composition of words and the formation of them, that if, after all, we must call it barbarous, 'tis the most beautiful and most learned of any barbarism in modern tongues; and we may at least as justly praise it, as Pyrrhus did the Roman discipline and martial order, that it was of barbarians (for so the Greeks called all other nations), but had nothing in it of barbarity. This language has in a manner been refined and purified from the Gothic ever since the time of Dante, which is above four hundred years ago; and the French, who now cast a longing eye to their country, are not less ambitious to possess their elegance in Poetry and Music; in both which they labor at impossibilities. 'Tis true, indeed, they have reformed their tongue, and brought both their prose and poetry to a standard; the sweetness, as well as the purity, is much improved, by throwing off the unnecessary consonants, which

made their spelling tedious, and their pronunciation harsh: but, after all, as nothing can be improved beyond its own *species*, or farther than its original nature will allow; as an ill voice, though ever so thoroughly instructed in the rules of music, can never be brought to sing harmoniously, nor many an honest critic ever arrive to be a good poet; so neither can the natural harshness of the French, or their perpetual ill accent, be ever refined into perfect harmony like the Italian. The English has yet more natural disadvantages than the French; our original Teutonic, consisting most in monosyllables, and those encumbered with consonants, cannot possibly be freed from those inconveniences. The rest of our words, which are derived from the Latin chiefly, and the French, with some small sprinklings of Greek, Italian, and Spanish, are some relief in Poetry, and help us to soften our uncouth numbers; which, together with our English genius, incomparably beyond the trifling of the French, in all the nobler parts of verse, will justly give us the pre-eminence. But, on the other hand, the effeminacy of our pronunciation (a defect common to us and to the Danes), and our scarcity of female rhymes, have left the advantage of musical composition for songs, though not for recitative, to our neighbors.

Through these difficulties I have made a shift to struggle in my part of the performance of this opera; which, as mean as it is, deserves at least a pardon, because it has attempted a discovery beyond any former undertaker of our nation; only remember, that if there be no North-East Passage to be found, the fault is in Nature, and not in me; or, as Ben Jonson tells us in *The Alchymist*, when projection had failed, and the glasses were all broken, there was enough, however, in the bottoms of them to cure the itch; so I may thus far be positive, that if I have not succeeded as I desire, yet there is somewhat still remaining to satisfy the curiosity, or itch of sight and hearing. Yet I have no great reason to despair; for I may, without vanity, own some advantages which are not common to every writer; such as are the knowledge of the Italian and French language, and the being conversant with some of their best performances, in this kind; which have furnished me with such variety of measures, as have given the composer, Monsieur Grabut, what occasions he could wish to show his extraordinary talent in diversifying the recitative, the lyrical part, and the chorus; in all which, not to attribute anything to my own opinion, the best judges, and those too of the best quality, who have honored his rehearsals with their presence, have no less commended the happiness of his genius than his skill. And let me have the liberty to add one thing, that he has so exactly expressed my sense in all places where I intended to move the passions that he seems to have entered into my thoughts and to have been the poet as well as the composer. This I say, not to

flatter him, but to do him right; because amongst some English musicians, and their scholars, who are sure to judge after them, the imputation of being a Frenchman is enough to make a party who maliciously endeavor to decry him. But the knowledge of Latin and Italian poets, both which he possesses, besides his skill in music, and his being acquainted with all the performances of the French operas, adding to these the good sense to which he is born, have raised him to a degree above any man who shall pretend to be his rival upon our stage. When any of our countrymen excel him, I shall be glad, for the sake of old England, to be shown my error; in the meantime, let virtue be commended, though in the person of a stranger.

If I thought it convenient I could here discover some rules which I have given to myself in the writing of an opera in general, and of this opera in particular; but I consider that the effect would only be to have my own performance measured by the laws I gave; and, consequently, to set up some little judges, who, not understanding thoroughly, would be sure to fall upon the faults and not to acknowledge any of the beauties; an hard measure, which I have often found from false critics. Here, therefore, if they will criticize, they shall do it out of their own fond; but let them first be assured that their ears are nice; for there is neither writing nor judgment on this subject without that good quality. 'Tis no easy matter, in our language, to make words so smooth, and numbers so harmonious, that they shall almost set themselves. And yet there are rules for this in Nature, and as great a certainty of quantity in our syllables, as either in the Greek or Latin: but let poets and judges understand those first, and then let them begin to study English. When they have chawed a while upon these preliminaries, it may be, they will scarce adventure to tax me with want of thought and elevation of fancy in this work; for they will soon be satisfied that those are not of the nature of this sort of writing. The necessity of doubling, rhymes, and ordering of the words and numbers for the sweetness of the voice, are the main hinges on which an opera must move; and both of these are without the compass of any art to teach another to perform, unless Nature, in the first place, has done her part by so enduing the poet with that nicety of hearing that the discord of sounds in words shall as much offend him as a seventh in music would offend a good composer. I have therefore no need to make excuses for want of thought in many places: the Italians, with all the advantage of their language, are continually forced upon it, or, rather, affected by it. The chief secret is the choice of words; and, by this choice, I do not mean elegance of expression, but propriety of sound, varied according to the nature of the subject. Perhaps a time may come when I may treat of this more largely, out of some observation

tions which I have made from Homer and Virgil, who, amongst all the poets, only understood the art of numbers, and of that which was properly called *rhythmus* by the ancients.

The same reasons which depress thought in an opera have a stronger effect upon the words, especially in our language; for there is no maintaining the purity of English in short measures, where the rhyme returns so quick, and is so often female, or double rhyme, which is not natural to our tongue, because it consists too much of monosyllables, and those, too, most commonly clogged with consonants; for which reason I am often forced to coin new words, revive some that are antiquated, and botch others; as if I had not served out my time in poetry, but was bound apprentice to some doggrel rhymers, who makes songs to tunes and sings them for a livelihood. It is true, I have not been often put to this drudgery; but where I have, the words will sufficiently show that I was then a slave to the composition, which I will never be again: it is my part to invent, and the musician's to humor that invention. I may be counselled, and will always follow my friend's advice where I find it reasonable, but will never part with the power of the militia.

I am now to acquaint my reader with somewhat more particular concerning this opera, after having begged his pardon for so long a preface to so short a work. It was originally intended only for a prologue to a play of the nature of *The Tempest*; which is a tragedy mixed with opera, or a drama, written in blank verse, adorned with scenes, machines, songs, and dances, so that the fable of it is all spoken and acted by the best of the comedians; the other part of the entertainment to be performed by the same singers and dancers who were introduced in this present opera. It cannot properly be called a play, because the action of it is supposed to be conducted sometimes by supernatural means or magic; nor an opera, because the story of it is not sung. But more of this at its proper time. But some intervening accidents having hitherto deferred the performance of the main design, I proposed to the actors to turn the intended prologue into an entertainment by itself, as you now see it, by adding two acts more to what I had already written. The subject of it is wholly allegorical; and the allegory itself so very obvious that it will no sooner be read than understood. It is divided, according to the plain and natural method of every action, into three parts. For even Aristotle himself is contented to say simply that in all actions there is a beginning, a middle, and an end; after which model all the Spanish plays are built.

The descriptions of the scenes and other decorations of the stage I had from Mr. Betterton, who has spared neither for industry, nor cost, to make this entertainment perfect, nor for invention of the ornaments to beautify it.

To conclude, though the enemies of the composer are not few, and that there is a party formed against him of his own profession, I hope, and am persuaded, that this prejudice will turn in the end to his advantage. For the greatest part of an audience is always uninterested, though seldom knowing; and if the music be well composed and well performed, they who find themselves pleased will be so wise as not to be imposed upon and fooled out of their satisfaction. The newness of the undertaking is all the hazard. When operas were first set up in France they were not followed over eagerly; but they gained daily upon their hearers, till they grew to that height of reputation which they now enjoy. The English, I confess are not altogether so musical as the French; and yet they have been pleased already with *The Tempest*, and some pieces that followed, which were neither much better written nor so well composed as this. If it finds encouragement, I dare promise myself to mend my hand by making a more pleasing fable. In the meantime, every loyal Englishman cannot but be satisfied with the moral of this, which so plainly represents the double restoration of his Sacred Majesty.

POSTSCRIPT

This Preface being wholly written before the death of my late Royal Master (*quem semper acerbum, semper honoratum, sic di voluistis habeo*) I have now lately reviewed it, as supposing I should find many notions in it that would require correction on cooler thoughts. After four months lying by me, I looked on it as no longer mine, because I had wholly forgotten it; but I confess with some satisfaction, and perhaps a little vanity, that I found myself entertained by it; my own judgment was new to me, and pleased me when I looked on it as another man's. I see no opinion that I would retract or alter, unless it be that possibly the Italians went not so far as Spain for the invention of their operas. They might have it in their own country; and that by gathering up the shipwrecks of the Athenian and Roman theatres, which we know were adorned with scenes, music, dances, and machines, especially the Grecian. But of this the learned Monsieur Vossius, who has made our nation his second country, is the best and perhaps the only judge now living. As for the opera itself, it was all composed, and was just ready to have been performed, when he, in honor of whom it was principally made, was taken from us.

He had been pleased twice or thrice to command that it should be practised before him, especially the first and third acts of it; and publicly declared, more than once, that the composition and choruses were more just and more beautiful than any he had heard in England. How nice an ear he had in music is sufficiently known; his

praise therefore has established the reputation of it above censure, and made it in manner sacred. 'Tis therefore humbly and religiously dedicated to his memory.

It might reasonably have been expected that his death must have changed the whole fabric of the opera, or at least a great part of it. But the design of it originally was so happy that it needed no alteration, properly so called; for the addition of twenty or thirty lines in the apotheosis of Albion has made it entirely of a piece. This was the only way which could have been invented to save it from botched ending; and it fell luckily into my imagination; as if there were a kind of fatality even in the most trivial things concerning the succession: a change was made, and not for the worse, without the least confusion or disturbance; and those very causes, which seemed to threaten us with troubles, conspired to produce our lasting happiness.

THE ESSAYS OF ELIA

BY CHARLES LAMB

(Charles Lamb, English essayist, was born in London, 1775. He was educated at Christ's Hospital, where he formed a friendship with his fellow-scholar, Coleridge. At one time he held the clerkships in the South Sea House and the India House. He never married, instead he devoted his life to his mad sister, Mary. His sister, mentally unbalanced, in a fit of fury killed her mother. She was tried and a verdict of temporary insanity was given and she was sent to an asylum where after a time her brother took her. Later she assisted him with his well known work, "Tales from Shakespeare". Charles Lamb wrote the tragedies and Mary Lamb the comedies. From 1820 to 1822 Charles Lamb contributed essays to the "London Magazine", under the name "Elia". These essays are probably the best of his works. He died in 1834, his sister surviving him by thirteen years.)

WITCHES AND OTHER NIGHT-FEARS

WE are too hasty when we set down our ancestors in the gross for fools for the monstrous inconsistencies (as they seem to us) involved in their own creed of witchcraft. In the relations of this visible world we find them to have been as rational, and shrewd to detect an historic anomaly, as ourselves. But when once the invisible world was supposed to be opened, and the lawless agency of bad spirits assumed, what measures of probability, of decency, of fitness, or proportion—of that which distinguishes the likely from the palpable absurd—could they have to guide them in the rejection of admission of any particular testimony?—that maidens pined away, wasting inwardly as their waxen images consumed before a fire—that corn was lodged, and cattle lamed—that whirlwinds up tore in diabolic revelry the oaks of the forest—or that spits and kettles only danced a fearful-innocent vagary about some rustic's kitchen when no wind was stirring—were all equally probable where no law of agency was understood. That the prince of the powers of darkness, passing by the flower and pomp of the earth, should lay preposterous siege to the weak fantasy of indigent eld—has neither likelihood nor unlikelihood *a priori* to us, who have no measure to guess at his policy, or standard to estimate what rate those anile souls may fetch in the devil's market. Nor, when the wicked are expressly symbolised by a goat, was it to be wondered at so much, that he should come some-

times in that body, and assert his metaphor.—That the intercourse was opened at all between both worlds was perhaps the mistake—but that once assumed, I see no reason for disbelieving one attested story of this nature more than another on the score of absurdity. There is no law to judge of the lawless, or canon by which a dream may be criticised.

I have sometimes thought that I could not have existed in the days of received witchcraft; that I could not have slept in a village where one of those reputed hags dwelt. Our ancestors were bolder or more obtuse. Amidst the universal belief that these wretches were in league with the author of all evil, holding hell tributary to their muttering, no simple Justice of the Peace seems to have scrupled issuing, or silly Headborough serving, a warrant upon them—as if they should subpoena Satan!—Prospero in his boat, with his books and wand about him, suffers himself to be conveyed away at the mercy of his enemies to an unknown island. He might have raised a storm or two, we think, on the passage. His acquiescence is in exact analogy to the non-resistance of witches to the constituted powers.—What stops the Fiend in Spenser from tearing Guyon to pieces—or who had made it a condition of his prey, that Guyon must take assay of the glorious bait—we have no guess. We do not know the laws of that country.

From my childhood I was extremely inquisitive about witches and witch-stories. My maid, and more legendary aunt, supplied me with good store. But I shall mention the accident which directed my curiosity originally into this channel. In my father's book-closet, the History of the Bible, by Stackhouse, occupied a distinguished station. The pictures with which it abounds—one of the ark, in particular, and another of Solomon's temple, delineated with all the fidelity of ocular admeasurement, as if the artist had been upon the spot—attracted my childish attention. There was a picture, too, of the Witch raising up Samuel, which I wish that I had never seen. We shall come to that hereafter. Stackhouse is in two huge tomes—and there was a pleasure in removing folios of that magnitude, which, with infinite straining, was as much as I could manage, from the situation which they occupied upon an upper shelf. I have not met with the work from that time to this, but I remember it consisted of Old Testament stories, orderly set down, with the objection appended to each story, and the solution of the objection regularly tacked to that. The objection was a summary of whatever difficulties had been opposed to the credibility of the history, by the shrewdness of ancient or modern infidelity, drawn up with an almost complimentary excess of candor. The solution was brief, modest, and satisfactory. The bane and antidote were both before you. To doubts so put, and so quashed, there seemed to be an end forever.

The dragon lay dead, for the foot of the veriest babe to trample on. But—like as was rather feared than realized from that slain monster in Spenser—from the womb of those crushed errors young dragonets would creep, exceeding the prowess of so tender a Saint George as myself to vanquish. The habit of expecting objections to every passage, set me upon starting more objections, for the glory of finding a solution of my own for them. I became staggered and perplexed, a sceptic in long coats. The pretty Bible stories which I had read, or heard read in church, lost their purity and sincerity of impression, and were turned into so many historic or chronologic theses be defended against whatever impugnors. I was not to disbelieve them, but—the next thing to that—I was to be quite sure that some one or other would or had disbelieved them. Next to making a child an infidel, is the letting him know that there are infidels at all. Credulity is the man's weakness, but the child's strength. O, how ugly sound scriptural doubts from the mouth of a babe and a suckling!—I should have lost myself in these mazes, and have pined away, I think, with such unfit sustenance as these husks afforded, but for a fortunate piece of ill fortune, which about this time befell me. Turning over the picture of the ark with too much haste, I unhappily made a breach in its ingenious fabric—driving my inconsiderate fingers right through the two larger quadrupeds—the elephant, and the camel—that stare (as well they might) out of the two last windows next the steerage in that unique piece of naval architecture. Stackhouse was henceforth locked up, and became an interdicted treasure. With the book, the objections and solutions gradually cleared out of my head, and have seldom returned since in any force to trouble me.—But there was one impression which I had imbibed from Stackhouse, which no lock or bar could shut out, and which was destined to try my childish nerves rather more seriously.—That detestable picture!

I was dreadfully alive to nervous terrors. The nighttime solitude, and the dark, were my hell. The sufferings I endured in this nature would justify the expression. I never laid my head on my pillow, I suppose, from the fourth to the seventh or eighth year of my life—so far as memory serves in things so long ago—without an assurance, which realized its own prophecy, of seeing some frightful specter. Be old Stackhouse then acquitted in part, if I say, that to his picture of the Witch raising up Samuel—(O that old man covered with a mantle!) I owe—not my midnight terrors, the hell of my infancy—but the shape and manner of their visitation. It was he who dressed up for me a hag that nightly sate upon my pillow—a sure bed-fellow, when my aunt or my maid was far from me. All day long, while the book was permitted me, I dreamed waking over his delineation, and at night (if I may use so bold an expression) awoke into sleep, and

found the vision true. I durst not, even in the daylight, once enter the chamber where I slept, without my face turned to the window, aversely from the bed where my witch-ridden pillow was.—Parents do not know what they do when they leave tender babes alone to go to sleep in the dark. The feeling about for a friendly arm—the hoping for a familiar voice—when they wake screaming—and find none to soothe them—what a terrible shaking it is to their poor nerves! The keeping them up till midnight, through candle-light and the unwholesome hours, as they are called,—would, I am satisfied, in a medical point of view, prove the better caution.—That detestable picture, as I have said, gave the fashion to my dreams—if dreams they were—for the scene of them was invariably the room in which I lay. Had I never met with the picture, the fears would have come self-pictured in some shape or other—

Headless bear, black man, or ape—

but, as it was, my imaginations took that form.—It is not book, or picture, or stories or foolish servants, which create these terrors in children. They can at most but give them a direction. Dear little T. H. who of all children has been brought up with the most scrupulous exclusion of every taint of superstition—who was never allowed to hear of goblin or apparition, or scarcely to be told of bad men, or to read or hear any distressing story—finds all this world of fear, from which he has been so rigidly excluded *ab extra*, in his own “thick-coming fancies”; and from his little midnight pillow, this nurse-child of optimism will start at shapes, unborrowed of tradition, in sweats to which the reveries of the cell-damned murderer are tranquillity.

Gorgons, and Hydras, and Chimæras dire—stories of Celæno and the Harpies—may reproduce themselves in the brain of superstition—but they were there before. They are transcripts, types—the archetypes are in us, and eternal. How else should the recital of that, which we know in a waking sense, come to affect us at all?—or

—Names, whose sense we see not,
Fray us with things that be not?

Is it that we naturally conceive terror from such objects, considered in their capacity of being able to inflict upon us bodily injury?—O, least of all! These terrors are of older standing. They date beyond body—or, without the body, they would have been the same. All the cruel, tormenting, defined devils in Dante—tearing, mangling, choking, stifling, scorching demons—are they one half so fearful to the spirit of a man, as the simple idea of a spirit unembodied following him—

Like one that on a lonesome road
Doth walk in fear and dread,
And having once turn'd round, walks on,
And turns no more his head;
Because he knows a frightful fiend
Doth close behind him tread.

That the kind of fear here treated of is purely spiritual—that it is strong in proportion as it is objectless upon earth—that it predominates in the period of sinless infancy—are difficulties, the solution of which might afford some probable insight into our ante-mundane condition, and a peep at least into the shadow-land of pre-existence.

My night-fancies have long ceased to be afflictive. I confess an occasional night-mare; but I do not, as in early youth, keep a stud of them. Fiendish faces, with the extinguished taper, will come and look at me; but I know them for mockeries, even while I cannot elude their presence, and I fight and grapple with them. For the credit of my imagination, I am almost ashamed to say how tame and prosaic my dreams are grown. They are never romantic, seldom even rural. They are of architecture and of buildings—cities abroad, which I have never seen, and hardly have hope to see. I have traversed, for the seeming length of a natural day, Rome, Amsterdam, Paris, Lisbon—their churches, palaces, squares, market-places, shops, suburbs, ruins, with an inexpressible sense of delight—a map-like distinctness of trace—and a daylight vividness of vision, that was all but being awake.—I have formerly traveled among the Westmoreland fells—my highest Alps,—but they are objects too mighty for the grasp of my dreaming recognition; and I have again and again awoke with ineffectual struggles of the inner eye, to make out a shape, in any way whatever, of Helvellyn. Methought I was in that country, but the mountains were gone. The poverty of my dreams mortifies me. There is Coleridge, at his will can conjure up icy domes, and pleasure-houses for Kubla Khan, and Abyssinian maids, and songs of Abara, and caverns,

Where Alph, the sacred river, runs,

to solace his night solitudes—when I cannot muster a fiddle. Barry Cornwall has his tritons and his nereids gamboling before him in nocturnal visions, and proclaiming sons born to Neptune—when my stretch of imaginative activity can hardly, in the night season, raise up the ghost of a fish-wife. To set my failures in somewhat a mortifying light—it was after reading the noble Dream of this poet, that my fancy ran strong upon these marine spectra; and the poor plastic power, such as it is, within me set to work, to humor my folly in a sort of dream that very night. Methought I was upon

the ocean billows at some sea nuptials, riding and mounted high, with the customary train sounding their conchs before me, (I myself, you may be sure, the leading god,) and jollily we went careering over the main, till just where Ino Leucothea should have greeted me (I think it was Ino) with a white embrace, the billows gradually subsiding, fell from a sea-roughness to a sea-calm, and thence to a river-motion, and that river (as happens in the familiarization of dreams) was no other than the gentle Thames, which landed me, in the wafture of a placid wave or two, alone, safe and inglorious, somewhere at the foot of Lambeth palace.

The degree of the soul's creativeness in sleep might furnish no whimsical criterion of the quantum of poetical faculty resident in the same soul waking. An old gentleman, a friend of mine, and a humorist, used to carry this notion so far, that when he saw any stripling of his acquaintance ambitious of becoming a poet, his first question would be,—“Young man, what sort of dreams have you?” I have so much faith in my old friend's theory, that when I feel that idle vein returning upon me, I presently subside into my proper element of prose, remembering those eluding nereids, and that inauspicious inland landing.

A DISSERTATION UPON ROAST PIG

MANKIND, says a Chinese manuscript, which my friend M.* was obliging enough to read and explain to me, for the first seventy thousand ages ate their meat raw, clawing or biting it from the living animal, just as they do in Abyssinia to this day. This period is not obscurely hinted at by their great Confucius in the second chapter of his Mundane Mutations, where he designates a kind of golden age by the term Cho-fang, literally the Cook's holiday. The manuscript goes on to say, that the art of roasting, or rather broiling (which I take to be the elder brother) was accidentally discovered in the manner following. The swine-herd, Ho-ti, having gone out into the woods one morning, as his manner was, to collect mast for his hogs left his cottage in the care of his eldest son Bo-bo, a great lubberly boy, who being fond of playing with fire, as youngers of his age commonly are, let some sparks escape into the bundle of straw, which kindled quickly, spread the conflagration over every part of their poor mansion, till it was reduced to ashes. Together with the cottage (a sorry antediluvian make-shift of a building, you may think it), what was of much more importance, a fine litter of new-farrowed pigs, no less than nine in number, perished. China pigs have been esteemed a luxury all over the East from the remotest periods that we read of. Bo-bo was in utmost consternation, as you may think, not so much for the sake of the tenement, which his father and he could easily build up again with a few dry branches, and the labour of an hour or two, at any time, as for the loss of the pigs. While he was thinking what he should say to his father, and wringing his hands over the smoking remnants of one of those untimely sufferings, an odour assailed his nostrils, unlike any scent which he had before experienced. What could it proceed from?—not from the burnt cottage—he had smelt that smell before—indeed this was by no means the first accident of the kind which had occurred through the negligence of this unlucky young fire-brand. Much less did it resemble that of any known herb, weed, or flower. A premonitory moistening at the same time overflowed his nether lip. He knew not what to think. He next stooped down to feel the pig, if there were any signs of life in it. He burnt his fingers, and to cool them he applied them in his booby fashion to his mouth. Some of the crumbs of the scorched skin had come away with his fingers, and for

the first time in his life (in the world's life indeed for before him no man had known it) he tasted—crackling! Again he felt and fumbled at the pig. It did not burn him so much now, still he licked his fingers from a sort of habit. The truth at length broke into his slow understanding, that it was the pig that smelt so, and the pig that tasted so delicious; and, surrendering himself up to the new-born pleasure, he fell to tearing up whole handfuls of the scorched skin with the flesh next it, and was cramming it down his throat in his beastly fashion, when his sire entered amid the smoking rafters, armed with retributory cudgel, and finding how affairs stood, began to rain blows upon the young rogue's shoulders, as thick as hail-stones, which Bo-bo heeded not any more than if they had been flies. The tickling pleasure which he experienced in his lower regions, had rendered him quite callous to any inconveniences he might feel in those remote quarters. His father might lay on, but he could not beat him from his pig, till he had fairly made an end of it, when, becoming a little more sensible of his situation, something like the following dialogue ensued.

"You graceless whelp, what have you got there devouring? Is it not enough that you have burnt me down three houses with your dog's tricks, and be hanged to you, but you must be eating fire, and I know not what—what have you got there, I say?"

"O, father, the pig, the pig, do come and taste how nice the burnt pig eats."

The ears of Ho-ti tinged with horror. He cursed his son, and he cursed himself that he should beget a son that should eat burnt pig.

Bo-bo, whose scent was wonderfully sharpened since morning, soon raked out another pig, and fairly rendering it asunder, thrust the lesser half by main force into the fists of Ho-ti, still shouting out "Eat, eat, eat the burnt pig, father, only taste—O Lord,"—with such-like barbarous ejaculations, cramming all the while as if he would choke.

Ho-ti trembled every joint while he grasped the abominable thing, wavering whether he should not put his son to death for an unnatural young monster, when the crackling scorching his fingers, as it had done his son's and applying the same remedy to them, he in his turn tasted some of its flavour, which, make what sour mouths he would for a pretense, proved not altogether displeasing to him. In conclusion (for the manuscript here is a little tedious), both father and son fairly sat down to the mess, and never left off till they had despatched all that remained of the litter.

Bo-bo was strictly enjoined not to let the secret escape, for the neighbours would certainly have stoned them for a couple of abominable wretches, who could think of improving upon the good meat

which God had sent them. Nevertheless, strange stories got about. It was observed that Ho-ti's cottage was burnt down now more frequently than ever. Nothing but fires from this time forward. Some would break out in broad day, others in the night-time. As often as the sow farrowed, so sure was the house of Ho-ti to be in a blaze; and Ho-ti himself, which was the more remarkable, instead of chastising his son, seemed to grow more indulgent to him than ever. At length they were watched, the terrible mystery discovered, and father and son summoned to take their trial at Peking, then an inconsiderable assizetown. Evidence was given, the obnoxious food itself produced in court, and verdict about to be pronounced, when the foreman of the jury begged that some of the burnt pig, of which the culprits stood accused, might be handed into the box. He handled it, and they all handled it, and burning their fingers, as Bo-bo and his father had done before them, and nature prompting to each of them the same remedy, against the face of all the facts, and the clearest charge which judge had ever given,—to the surprise of the court, townsfolk, strangers, reporters, and all present—without leaving the box, or any manner of consultation whatever, they brought in a simultaneous verdict of Not Guilty.

The judge, who was a shrewd fellow, winked at the manifest iniquity of the decision: and when the court was dismissed, went privily, and bought up all the pigs that could be had for love or money. In a few days his Lordship's town house was observed to be on fire. The thing took wings, and now there was nothing to be seen but fires in every direction. Fuel and pigs grew enormously dear all over the district. The insurance offices one and all shut up shop. People built slighter and slighter every day, until it was feared that the very science of architecture would in no long time be lost to the world. Thus this custom of firing houses continued, till in process of time, says my manuscript, a sage arose, like our Locke, who made a discovery, that the flesh of swine, or indeed of any other animal, might be cooked (burnt, as they called it) without the necessity of consuming a whole house to dress it. Then first began the rude form of a gridiron. Roasting by the string, or spit, came in a century or two later, I forget in whose dynasty. By such slow degrees, concludes the manuscript, do the most useful, and seemingly the most obvious arts, make their way among mankind.—

Without placing too implicit faith in the account above given, it must be agreed, that if a worthy pretext for so dangerous an experiment as setting houses on fire (especially in these days) could be assigned in favour of any culinary object, that pretext and excuse might be found in ROAST PIG.

Of all the delicacies in the whole *mundus edibilis*, I will maintain it to be the most delicate—*princeps obsoniorum*.

I speak not of your grown porkers—things between pig and pork—those hobbydehoys—but a young and tender suckling—under a moon old—guiltless as yet of the sky—with no original specks of the *amor immunditiæ*, the hereditary failing of the first parent, yet manifest—his voice as yet not broken, but something between a childish treble, and a grumble—the mild forerunner, or *prælude*, of a grunt.

He must be roasted. I am not ignorant that our ancestors ate them seethed, or boiled—but what a sacrifice of the exterior tegument!

There is no favour comparable, I will contend, to that of the crisp, tawny, well-watched, not over-roasted, crackling, as it is well called—the very teeth are invited to their share of the pleasure at this banquet in overcoming the coy, brittle resistance—with the adhesive oleaginous—O call it not fat—but an indefinable sweetness growing up to it—the tender blossoming of fat—fat cropped in the bud—taken in the shoot—in the first innocence—the cream and quintessence of the child-pig's yet pure food—the lean, no lean, but a kind of animal manna—or, rather, fat and lean, (if it must be so) so blended and running into each other, that both together make but one ambrosian result, or common substance.

Behold him, while he is doing—it seemeth rather a refreshing warmth, than a scorching heat, that he is so passive to. How equably he twirleth round the string!—Now he is just done. To see the extreme sensibility of that tender age, he hath wept out his pretty eyes—radiant jellies-shooting stars—

See him in the dish, his second cradle, how meek he lieth!—wouldst thou have had this innocent grow up to the grossness and indocility which too often accompany maturer swinehood? Ten to one he would have proved a glutton, a sloven, an obstinate, disagreeable animal—wallowing in all manner of filthy conversation—from these sins he is happily snatched away—

Ere sin could blight, or sorrow fade,
Death came with timely care—

his memory is odoriferous—no clown curseth, while his stomach half rejecteth, the rank bacon—no coalheaver bolteth him in reeking sausages—he hath a fair sepulchre in the grateful stomach of the judicious epicure—and for such a tomb might be content to die.

He is the best of sapor. Pineapple is great. She is indeed almost too transcendent—a delight, if not sinful, yet so like to sinning, that really a tender-conscienced person would do well to pause—too ravishing for mortal taste, she woundeth and excoriateth the

lips that approach her—like lovers' kisses, she biteth—she is a pleasure bordering on pain from the fierceness and insanity of her relish—but she stoppeth at the palate—she meddleth not with the appetite—and the coarsest hunger might barter her consistently for a mut-ton chop.

Pig—let me speak his praise—is no less provocative of the appetite, than he is satisfactory to the criticalness of the censorious palate. The strong man may batten on him, and the weakling refuseth not his mild juices.

Unlike to mankind's mixed characters, a bundle of virtues and vices, inexplicably intertwined, and not to be unraveled without hazard, he is—good throughout. No part of him is better or worse than another. He helpeth, as far as his little means extend, all around. He is the least envious of banquets. He is all neighbours' fare.

I am one of those, who freely and ungrudgingly impart a share of the good things of this life which fall to their lot (few as mine are in this kin) to a friend. I protest I take as great an interest in my friend's pleasures, his relishes, and proper satisfactions, as in mine own. "Presents," I often say, "endear Absents." Hares, pheasants, partridges, snipes, barn-door chickens (those "tame villatic fowl"), capons, plovers, brawn, barrels of oysters, I dispense as freely as I receive them. I love to taste them, as it were, upon the tongue of my friend. But a stop must be put somewhere. One would not, like Lear, "give everything." I make my stand upon pig. Methinks it is an ingratitude to the Giver of all good flavours, to extra-domiciliate, or send out of the house, slightly (under pretext of friendship, or I know not what), a blessing so particularly adapted, predestined, I may say, to my individual palate—It argues an insensibility.

I remember a touch of conscience in this kind at school. My good old aunt, who never parted from me at the end of a holiday without stuffing a sweetmeat, or some nice thing, into my pocket, had dismissed me one evening with a smoking plum-cake, fresh from the oven. In my way to school, (it was over London Bridge) a gray-headed old beggar saluted me (I have no doubt at this time of day that he was a counterfeit). I had no pence to console him with, and in the vanity of self-denial, and the very coxcombrity of charity, school-boy like, I made him a present of—the whole cake! I walked on a little, buoyed up, as one is on such occasions, with a sweet soothing of self-satisfaction; but before I had got to the end of the bridge, my better feelings returned, and I burst into tears, thinking how ungrateful I had been to my good aunt, to go and give her good gift away to a stranger, that I had never seen before, and who might be a bad man for aught I knew; and then I thought of the pleasure my aunt would be taking in thinking that I—I myself, and not another—would eat

her nice cake—and what should I say to her the next time I saw her—how naughty I was to part with her pretty present—and the odour of that spicy cake came back upon my recollection, and the pleasure and the curiosity I had taken in seeing her make it, and her joy when she sent it to the oven, and how disappointed she would feel that I had never had a bit of it in my mouth at last—and I blamed my impertinent spirit of alms-giving, and out-of-place hypocrisy of goodness, and above all I wished never to see the face again of that insidious, good-for-nothing, old gray imposter.

Our ancestors were nice in their method of sacrificing these tender victims. We read of pigs whipt to death with something of a shock, as we hear of any other obsolete custom. The age of discipline is gone by, or it would be curious to inquire (in a philosophical light merely) what effect this process might have toward intenerating and dulcyfying a substance, naturally so mild and dulcet as the flesh of young pigs. It looks like refining a violet. Yet we should be cautious, while we condemn the inhumanity, how we censure the wisdom of the practice. It might impart a gusto—

I remember an hypothesis, argued upon by the young students, when I was at St. Omer's, and maintained with much learning and pleasantry on both sides, "Whether supposing that the flavour of a pig who obtained his death by whipping (*per flagellationem extremam*) superadded a pleasure upon the palate of a man more intense than any other possible suffering we can conceive in the animal, is man justified in using that method of putting the animal to death?" I forget the decision.

His sauce should be considered. Decidedly, a few bread crumbs, done up with his liver and brains, and a dash of mild sage. But, banish, dear Mrs. Cook, I beseech you, the whole onion tribe. Barbecue your whole hogs to your palate, steep them in shalots, stuff them with plantations of the rank and guilty garlic; you cannot poison them, or make them stronger than they are—but consider, he is a weakling—a flower.

POOR RELATIONS

A POOR Relation—is the most irrelevant thing in nature,—a piece of impertinent correspondence,—an odious approximation,—a haunting conscience,—a preposterous shadow, lengthening in the noon-tide of our prosperity,—an unwelcome remembrancer,—a perpetually recurring mortification,—a drain on your purse,—a more intolerable dun upon your pride,—a drawback upon success,—a rebuke to your rising,—a stain in your blood,—a blot on your 'scutcheon,—a rent in your garment,—a death's head at your banquet,—Agathocles' pot,—a Mordecai in your gate,—a Lazarus at your door,—a lion in your path,—a frog in your chamber,—a fly in your ointment,—a mote in your eye,—a triumph to your enemy, an apology to your friends,—the one thing not needful,—the hail in harvest,—the ounce of sour in a pound of sweet.

He is known by his knock. Your heart telleth you "That is Mr. —." A rap, between familiarity and respect; that demands, and, at the same time, seems to despair of, entertainment. He entereth smiling and—embarrassed. He holdeth out his hand to you to shake, and—draweth it back again. He casually looketh in about dinner-time—when the table is full. He offereth to go away, seeing you have company, but is induced to stay. He filleteth a chair, and your visitor's two children are accommodated at a side table. He never cometh upon open days, when your wife says with some complacency, "My dear, perhaps Mr. — will drop in to-day." He remembereth birthdays—and professeth he is fortunate to have stumbled upon one. He declareth against fish, the turbot being small—yet suffereth himself to be importuned into a slice against his first resolution. He sticketh by the port—yet will be prevailed upon to empty the remainder glass of claret, if a stranger press it upon him. He is a puzzle to the servants, who are fearful of being too obsequious, or not civil enough, to him. The guests think "they have seen him before." Everyone speculateth upon his condition; and the most part take him to be—a tide waiter. He calleth you by your Christian name, to imply that his other is the same with your own. He is too familiar by half, yet you wish he had less diffidence. With half the familiarity he might pass for a casual dependent; with more boldness he would be in no danger of being taken for what he is. He is too humble for a friend, yet taketh on him more state

than befits a client. He is a worse guest than a country tenant, inasmuch as he bringeth up no rent—yet 'tis odds, from his garb and demeanor, that your guests take him for one. He is asked to make one at the whist table; refuseth on the score of poverty, and—resents being left out. When the company break up he proffereth to go for a coach—and lets the servant go. He recollects your grandfather; and will thrust in some mean and quite unimportant anecdote of—the family. He knew it when it was not quite so flourishing as “he is blest in seeing it now.” He reviveth past situations to institute what he calleth—favorable comparisons. With a reflecting sort of congratulation, he will inquire the price of your furniture: and insults you with a special commendation of your window-curtains. He is of opinion that the turn is the more elegant shape, but, after all, there was something more comfortable about the old tea-kettle—which you must remember. He dare-say you must find a great convenience in having a carriage of your own, and appealeth to your lady if it is not so. Inquireth if you have had your arms done on vellum yet; and did not know, till lately, that such-and-such had been the crest of the family. His memory is unseasonable; his compliments perverse; his talk a trouble; his stay pertinacious; and when he goeth away, you dismiss his chair into a corner, as precipitately as possible, and feel fairly rid of two nuisances.

There is a worse evil under the sun, and that is—a female Poor Relation. You may do something with the other; you may pass him off tolerably well; but your indigent she-relative is hopeless. “He is an old humorist,” you may say, “and affects to go threadbare. His circumstances are better than folks would take them to be. You are fond of having a Character at your table, and truly he is one.” But in the indications of female poverty there can be no disguise. No woman dresses below herself from caprice. The truth must out without shuffling. “She is plainly related to the L—s; or what does she at their house?” She is, in all probability, your wife’s cousin. Nine times out of ten, at least, this is the case. Her garb is something between a gentlewoman and a beggar, yet the former evidently predominates. She is most provokingly humble, and ostentatiously sensible to her inferiority. He may require to be repressed sometimes—*aliquando sufflaminandus erat*—but there is no raising her. You send her soup at dinner, and she begs to be helped—after the gentlemen. Mr. — requests the honor of taking wine with her; she hesitates between Port and Madeira, and choseth the former—because he does. She calls the servant Sir; and insists on not troubling him to hold her plate. The housekeeper patronizes her. The childrens’ governess takes upon her to correct her, when she has mistaken the piano for a harpischord.

Richard Amlet, Esq., in the play, is a noticeable instance of the

disadvantages, to which this chimerical notion of affinity constituting a claim to an acquaintance, may subject the spirit of a gentleman. A little foolish blood is all that is betwixt him and a lady with a great estate. His stars are perpetually crossed by the malignant maternity of an old woman, who persists in calling him "her son Dick." But she has wherewithal in the end to recompense his indignities, and float him again upon the brilliant surface, under which it had been her seeming business and pleasure all along to sink him. All men, besides, are not of Dick's temperament. I knew an Amlet in real life, who wanting Dick's buoyancy, sank indeed. Poor W—— was of my own standing at Christ's, a fine classic, and a youth of promise. If he had a blemish, it was too much pride; but its quality was inoffensive; it was not of that sort which hardens the heart, and serves to keep inferiors at a distance; it only sought to ward off derogation from itself. It was the principle of self-respect carried as far as it could go, without infringing upon that respect, which he would have every one else equally maintain for himself. He would have you to think alike with him on this topic. Many a quarrel have I had with him, when we were rather older boys, and our tallness made us more obnoxious to observation in the blue clothes, because I would not thread the alleys and blind ways of the town with him to elude notice, when we have been out together on a holiday in the streets of this sneering and prying metropolis. W—— went, sore with these notions, to Oxford, where the dignity and sweetness of a scholar's life, meeting with the alloy of a humble introduction, wrought in him a passionate devotion to the place, with a profound aversion to the society. The servitor's gown (worse than his school array) clung to him with Nessian venom. He thought himself ridiculous in a garb, under which Latimer must have walked erect; and in which Hooker, in his young days, possibly flaunted in a vein of no discommendable vanity. In the depths of college shades, or in his lonely chamber, the poor student shrunk from observation. He found shelter among books, which insult not; and studies, that ask no questions of a youth's finances. He was lord of his library, and seldom cared for looking out beyond his domains. The healing influence of studious pursuits was upon him, to soothe and to abstract. He was almost a healthy man; when the waywardness of his fate broke out against him with a second and worse malignity. The father of W—— had hitherto exercised the humble profession of house-painter at N——, near Oxford. A supposed interest with some of the heads of colleges had now induced him to take up his abode in that city, with the hope of being employed upon some public works which were talked of. From that moment I read in the countenance of the young man, the determination which at length tore him from academical pur-

suits for ever. To a person unacquainted with our Universities, the distance between the gownsmen and the townsmen, as they are called—the trading part of the latter especially—is carried to an excess that would appear harsh and incredible. The temperament of W——’s father was diametrically the reverse of his own. Old W—— was a little, busy, cringing tradesman, who, with his son upon his arms, would stand bowing and scraping, cap in hand, to anything that wore the semblance of a gown—insensible to the winks and opener remonstrances of the young man, to whose chamber-fellow, or equal in standing, perhaps, he was thus obsequiously and gratuitously ducking. Such a state of things could not last. W—— must change the air of Oxford or be suffocated. He chose the former; and let the sturdy moralist, who strains the point of the filial duties as high as they can bear, censure the dereliction; he cannot estimate the struggle. I stood with W——, the last afternoon I ever saw him, under the eaves of his paternal dwelling. It was in the fine lane leading from the High Street to the back of **** college, where W—— kept his rooms. He seemed thoughtful and more reconciled. I ventured to rally him—finding him in a better mood—upon a representation of the Artist Evangelist, which the old man, whose affairs were beginning to flourish, had caused to be set up in a splendid sort of frame over his really handsome shop, either as a token of prosperity, or badge of gratitude to his saint. W—— looked up at the Luke, and, like Satan, “knew his mounted sign—and fled.” A letter on his father’s table the next morning, announced that he had accepted a commission in a regiment about to embark for Portugal. He was among the first who perished before the walls of St. Sebastian.

I do not know how, upon a subject which I began with treating half seriously, I should have fallen upon a recital so eminently painful; but this theme of poor relationship is replete with so much matter for tragic as well as comic associations, that it is difficult to keep the account distinct without blending. The earliest impressions which I received on this matter, are certainly not attended with anything painful, or very humiliating, in the recalling. At my father’s table (no very splendid one) was to be found, every Saturday, the mysterious figure of an aged gentleman, clothed in neat black, of a sad yet comely appearance. His deportment was of the essence of gravity; his words few or none; and I was not to make a noise in his presence. I had little inclination to have done so—for my cue was to admire in silence. A particular elbow chair was appropriated to him, which was in no case to be violated. A peculiar sort of sweet pudding, which appeared on no other occasion, distinguished the days of his coming. I used to think him a prodigiously rich man. All I could make out of him was, that he and my

father had been schoolfellows a world ago at Lincoln, and that he came from the Mint. The Mint I knew to be a place where all the money was coined—and I thought he was the owner of all that money. Awful ideas of the Tower twined themselves about his presence. He seemed above human infirmities and passions. A sort of melancholy grandeur invested him. From some inexplicable doom I fancied him obliged to go about in an eternal suit of mourning; a captive—a stately being, let out of the Tower on Saturdays. Often have I wondered at the temerity of my father, who, in spite of an habitual general respect which we all in common manifested towards him, would venture now and then to stand up against him in some argument, touching their youthful days. The houses of the ancient city of Lincoln are divided (as most of my readers know) between the dwellers on the hill, and in the valley. This marked distinction formed an obvious division between the boys who lived above (however brought together in a common school) and the boys whose paternal residence was on the plain; a sufficient cause of hostility in the code of these young Grotiuses. My father had been a leading Mountaineer; and would still maintain the general superiority, in skill and hardihood, of the Above Boys (his own faction) over the Below Boys (so were they called), of which party his contemporary had been a chieftain. Many and hot were the skirmishes on this topic—the only one upon which the old gentleman was ever brought out—and bad blood bred; even sometimes almost to the recommencement (so I expected) of actual hostilities. But my father, who scorned to insist upon advantages, generally contrived to turn the conversation upon some adroit by-commendation of the old Minister; in the general preference of which, before all other cathedrals in the island, the dweller on the hill, and the plain-born, could meet on a conciliating level, and lay down their less important differences. Once only I saw the old gentleman really ruffled, and I remembered with anguish the thought that came over me: “Perhaps he will never come here again.” He had been pressed to take another plate of the viand, which I have already mentioned as the indispensable concomitant of his visits. He had refused with a resistance amounting to rigor—when my aunt, an old Lincolnian, but who had something of this in common with my cousin Bridget, that she would sometimes press civility out of season—uttered the following memorable application—“Do take another slice, Mr. Billet, for you do not get pudding every day.” The old gentleman said nothing at the time—but he took occasion in the course of the evening, when some argument had intervened between them, to utter with an emphasis which chilled the company, and which chills me now as I write it—“Woman, you are superannuated.” John Billet did not survive long, after the digesting of this affront; but he survived long enough to assure me that peace

was actually restored! and, if I remember aright, another pudding was discreetly substituted in the place of that which had occasioned the offense. He died at the Mint (anno 1781) where he had long held, what he accounted, a comfortable independence; and with five pounds, fourteen shillings, and a penny, which were found in his escrutoire after his decease, left the world, blessing God that he had enough to bury him, and that he had never been obliged to any man for a sixpence. This was—a Poor Relation.

THE GENTEEL STYLE IN WRITING

It is an ordinary criticism, that my Lord Shaftsbury, and Sir William Temple, are models of the genteel style in writing. We should prefer saying—of the lordly, and the gentlemanly. Nothing can be more unlike, than the inflated finical rhapsodies of Shaftsbury and the plain natural chit-chat of Temple. The man of rank is discernible in both writers; but in the one it is only insinuated gracefully, in the other it stands out offensively. The peer seems to have written with his coronet on, and his Earl's mantle before him; the commoner in his elbow chair and undress. What can be more pleasant than the way in which the retired statesman peeps out in his essays, penned by the latter in his delightful retreat at Shene? They scent of Nimeguen, and the Hague. Scarce an authority is quoted under an ambassador. Don Francisco de Melo, a "Portugal Envoy in England," tells him it was frequent in his country for men, spent with age and other decays, so as they could not hope for above a year or two of life, to ship themselves away in a Brazil fleet, and after their arrival there to go on a great length, sometimes of twenty or thirty years, or more, by the force of that vigor they recovered with that remove. "Whether such an effect (Temple beautifully adds) might grow from the air, or the fruits of that climate, or by approaching nearer the sun, which is the fountain of light and heat, when their natural heat was so far decayed: or whether the piecing out of an old man's life were worth the pains, I cannot tell; perhaps the play is not worth the candle."—Monsieur Pomponne, "French ambassador in his (Sir William's) time at the Hague," certifies him, that in his life he had never heard of any man in France that arrived at a hundred years of age; a limitation of life which the old gentleman imputes to the excellence of their climate, giving them such a liveliness of temper and humor, as disposes them to more pleasures of all kinds than in other countries; and moralizes upon the matter very sensibly. The "late Robert Earl of Leicester" furnishes him with a story of a Countess of Desmond, married out of England in Edward the Fourth's time, and who lived far in King James's reign. The "same noble person" gives him an account, how such a year, in the same reign, there went about the country a set of morrice-dancers, composed of ten men who danced, a Maid Marian, and a tabor and pipe; and how

these twelve, one with another, made up twelve hundred years. "It was not so much (says Temple) that so many in one small county (Hertfordshire) should live to that age, as that they should be in vigor and in humor to travel and to dance." Monsieur Zulichem, one of his "colleagues at the Hague," informs him of a cure for the gout; which is confirmed by another "Envoy," Monsieur Serinchamps, in that town, who had tried it,—Old Prince Maurice of Nassau recommends to him the use of hammocks in that complaint; having been allured to sleep, while suffering under it himself, by the "constant motion or swinging of those airy beds." Count Egmont, and the Rhinegrave who "was killed last summer before Maestricht," impart to him their experiences.

But the rank of the writer is never more innocently disclosed, than where he takes for granted the compliments paid by foreigners to his fruit trees. For the taste and perfection of what we esteem the best, he can truly say, that the French, who have eaten his peaches and grapes at Shene in no very ill year, have generally concluded that the last are as good as any they have eaten in France on this side Fontainebleau; and the first as good as any they have eat in Gascony. Italians have agreed his white figs to be as good as any of that sort in Italy, which is the earlier kind of white fig there; for in the latter kind and the blue, we cannot come near the warm climates, no more than in the Frontignac or Muscat grape. His orange-trees too, are as large as any he saw when he was young in France, except those in Fontainebleau; or what he has seen since in the Low Countries, except some very old ones of the Prince of Orange's. Of grapes he had the honor of bringing over four sorts into England, which he enumerates, and supposes that they are all by this time pretty common among some gardeners in his neighborhood, as well as several persons of quality; for he ever thought all things of this kind "the commoner they are made the better." The garden pedantry with which he asserts that 'tis to little purpose to plant any of the best fruits, as peaches or grapes, hardly, he doubts, beyond Northamptonshire at the furthest northwards; and praises the "Bishop of Munster at Cosevelt," for attempting nothing beyond cherries in that cold climate; is equally pleasant and in character. "I may perhaps" (he thus ends his sweet Garden Essay with a passage worthy of Cowley) "be allowed to know something of this trade, since I have so long allowed myself to be good for nothing else, which few men will do, or enjoy their gardens, without often looking abroad to see how other matters play, what motions in the state, and what invitations they may hope for into other scenes. For my own part, as the country life, and this part of it more particularly, were the inclination of my youth itself, so they are the pleasure of my age; and I can truly say that, among many

great employments that have fallen to my share, I have never asked or sought for any of them, but have often endeavored to escape from them, into the ease and freedom of a private scene, where a man may go his own way and his own pace, in the common paths and circles of life. The measure of choosing well is whether a man likes what he has chosen, which I thank God has befallen me; and though among the follies of my life, building and planting have not been the least, and have cost me more than I have the confidence to own; yet they have been fully recompensed by the sweetness and satisfaction of this retreat, where, since my resolution taken of never entering again into any public employments, I have passed five years without ever once going to town, though I am almost in sight of it, and have a house there always ready to receive me. Nor has this been any sort of affectation, as some have thought it, but a mere want of desire or humor to make so small a remove; for when I am in this corner, I can truly say with Horace, *Me quoties reficit, &c.*

“Me, when the cold Digentian stream revives,
 What does my friend believe I think or ask?
 Let me yet less possess, so I may live,
 Whate’er of life remains, unto myself.
 May I have books enough; and one year’s store,
 Not to depend upon each doubtful hour:
 This is enough of mighty Jove to pray,
 Who, as he pleases, gives and takes away.”

The writings of Temple are, in general, after this easy copy. On one occasion, indeed, his writ, which was mostly subordinate to nature and tenderness, has seduced him into a string of felicitous antitheses: which, it is obvious to remark, have been a model to Addison and succeeding essayists. “Who would not be covetous, and with reason,” he says, “if health could be purchased with gold? who not ambitious, if it were at the command of power, or restored by honor? but, alas! a white staff will not help gouty feet to walk better than a common cane; nor a blue riband bind up a wound so well as a fillet. The glitter of gold, or of diamonds, will but hurt sore eyes instead of curing them; and an aching head will be no more eased by wearing a crown, than a common nightcap.” In a far better style, and more accordant with his own humor of plainness, are the concluding sentences of his “Discourse upon Poetry.” Temple took a part in the controversy about the ancient and the modern learning; and, with that partiality so natural and so graceful in an old man, whose state engagements had left him little leisure to look into modern productions, while his retirement gave him occasion to look back upon the classic studies of his youth—decided

in favor of the latter. "Certain it is," he says, that, whether the fierceness of the Gothic humors, or noise of their perpetual wars, frightened it away, or that the unequal mixture of the modern languages would not bear it—the great heights and excellency both of poetry and music fell with the Roman learning and empire, and have never since recovered the admiration and applauses that before attended them. Yet, such as they are amongst us, they must be confessed to be the softest and the sweetest, the most general and most innocent amusements of common time and life. They still find room in the courts of princes, and the cottages of shepherds. They serve to revive and animate the dead calm of poor and idle lives, and to allay or divert the violent passions and perturbations of the greatest and the busiest men. And both these effects are of equal use to human life; for the mind of man is like the sea, which is neither agreeable to the beholder nor the voyager, in a calm or in a storm, but is so to both when a little agitated by gentle gales; and so the mind, when moved by soft and easy passions or affections. I know very well that many who pretend to be wise by the forms of being grave, are apt to despise both poetry and music, as toys and trifles too light for the use or entertainment of serious men. But whoever find themselves wholly insensible to their charms, would, I think, do well to keep their own counsel, for fear of reproaching their own temper, and bringing the goodness of their natures, if not of their understandings, into question. While this world lasts, I doubt not but the pleasure and request of these two entertainments will do so too; and happy those that content themselves with these, or any other so easy and so innocent, and do not trouble the world or other men, because they cannot be quiet themselves, though nobody hurts them." "When all is done (he concludes), human life is at the greatest and the best but like a forward child, that must be played with, and humored a little, to keep it quiet till it falls asleep, and then the care is over."

CONFESSIONS OF A DRUNKARD

DEHORTATIONS from the use of strong liquors have been the favorite topic of sober declaimers in all ages, and have been received with abundance of applause by water-drinking critics. But with the patient himself, the man that is to be cured, unfortunately their sound has seldom prevailed. Yet the evil is acknowledged, the remedy simple. Abstain. No force can oblige a man to raise the glass to his head against his will. 'Tis as easy as not to steal, not to tell lies.

Alas! the hand to pilfer, and the tongue to bear false witness, have no constitutional tendency. These are actions indifferent to them. At the first instance of the reformed will, they can be brought off without a murmur. The itching finger is but a figure in speech, and the tongue of the liar can with the same natural delight give forth useful truths, with which it has been accustomed to scatter their pernicious contraries. But when a man has commenced sot——

O pause, thou sturdy moralist, thou person of stout nerves and a strong head, whose liver is happily untouched, and ere thy gorge riseth at the name which I have written, first learn what the thing is; how much of compassion, how much of human allowance, thou mayst virtuously mingle with thy disapprobation. Trample not on the ruins of a man. Exact not, under so terrible a penalty as infamy, a resuscitation from a state of death almost as real as that from which Lazarus rose, but by a miracle.

Begin a reformation, and custom will make it easy. But what if the beginning be dreadful, the first steps not like climbing a mountain but going through fire? what if the whole system must undergo a change violent as that which we conceive of the mutation of form in some insects? what if a process comparable to flaying alive be to be gone through? is the weakness that sinks under such struggles to be confounded with the pertinacity which clings to other vices, which have induced no constitutional necessity, no engagement of the whole victim, body and soul?

I have known one in that state, when he has tried to abstain but for one evening,—though the poisonous potion had long ceased to bring back its first enchantments, though he was sure it would rather deepen his gloom than brighten it,—in the violence of the struggle, and the necessity he has felt of getting rid of the present sensation

at any rate, I have known him to scream out, to cry aloud, for the anguish and pain of the strife within him.

Why should I hesitate to declare, that the man of whom I speak is myself? I have no puling apology to make to mankind. I see them all in one way or another deviating from the pure reason. It is to my own nature alone I am accountable for the woe that I have brought upon it.

I believe that there are constitutions, robust heads and iron insides, whom scarce any excesses can hurt; whom brandy (I have seen them drink it like wine), at all events whom wine, taken in ever so plentiful measure, can do no worse injury to than just to muddle their faculties, perhaps never very pellucid. On them this discourse is wasted. They would but laugh at a weak brother, who, trying his strength with them, and coming off foiled from the contest, would fain persuade them that such agonistic exercises are dangerous. It is to a very different description of persons I speak. It is to the weak, the nervous; to those who feel the want of some artificial aid to raise their spirits in society to what is no more than the ordinary pitch of all around them without it. This is the secret of our drinking. Such must fly the convivial board in the first instance, if they do not mean to sell themselves for term of life.

Twelve years ago I had completed my six-and-twentieth year. I had lived from the period of leaving school to that time pretty much in solitude. My companions were chiefly books, or at most one or two living ones of my own book-loving and sober stamp. I rose early, went to bed betimes, and the faculties which God had given me, I have reason to think, did not rust in me unused.

About that time I fell in with some companions of a different order. They were men of boisterous spirits, sitters up a-nights, disputants, drunken; yet seemed to have something noble about them. We dealt about the wit, or what passes for it after midnight, jovially. Of the quality called fancy I certainly possessed a larger share than my companions. Encouraged by their applause, I set up for a professed joker! I, who of all men am least fitted for such an occupation, having, in addition to the greatest difficulty which I experience at all times of finding words to express my meaning, a natural nervous impediment in my speech!

Reader, if you are gifted with nerves like mine, aspire to any character but that of a wit. When you find a tickling relish upon your tongue disposing you to that sort of conversation, especially if you find a preternatural flow of ideas setting in upon you at the sight of a bottle and fresh glasses, avoid giving way to it as you would fly your greatest destruction. If you cannot crush the power of fancy, or that within you which you mistake for such, divert it, give it some other play. Write an essay, pen a character or descrip-

tion,—but not as I do now, with tears trickling down your cheeks.

To be an object of compassion to friends, of derision to foes; to be suspected by strangers, stared at by fools; to be esteemed dull when you cannot be witty, to be applauded for witty when you know that you have been dull; to be called upon for the extemporaneous exercise of that faculty which no premeditation can give; to be spurred on to efforts which end in contempt; to be set on to provoke mirth which procures the procurer hatred; to give pleasure and be paid with squinting malice; to swallow draughts of life-destroying wine which are to be distilled into airy breath to tickle vain auditors; to mortgage miserable morrows for nights of madness; to waste whole seas of time upon those who pay it back in little inconsiderable drops of grudging applause,—are the wages of buffoonery and death.

Time, which has a sure stroke at dissolving all connections which have no solid fastening than this liquid cement, more kind to me than my own taste or penetration, at length opened my eyes to the supposed qualities of my first friends. No trace of them is left but in the vices which they introduced, and the habits they infixed. In them my friends survive still, and exercise ample retribution for any supposed infidelity that I may have been guilty of towards them.

My next more immediate companions were and are persons of such intrinsic and felt worth, that though accidentally their acquaintance has proved pernicious to me, I do not know that if the thing were to do over again, I should have the courage to eschew the mischief at the price of forfeiting the benefit. I came to them reeking from the steams of my late over-heated motions of companionship; and the slightest fuel which they unconsciously afforded, was sufficient to feed my old fires into a propensity.

They were no drinkers, but, one from professional habits, and another from a custom derived from his father, smoked tobacco. The devil could not have devised a more subtle trap to re-take a backsliding penitent. The transition, from gulping down draughts of liquid fire to puffing out innocuous blasts of dry smoke, was so like cheating him. But he is too hard for us when we hope to commute. He beats us at barter; and when we think to set off a new failing against an old infirmity, 'tis odds but he puts the trick upon us of two for one. That (comparatively) white devil of tobacco brought with him in the end seven worse than himself.

It were impertinent to carry the reader through all the processes by which, from smoking at first with malt liquor, I took my degrees through thin wines, through stronger wine and water, through small punch, to those juggling compositions, which, under the name of mixed liquors, slur a great deal of brandy or other poison under less

and less water continually, until they come next to none, and so to none at all. But it is hateful to disclose the secrets of my Tartarus.

I should repel my readers, from a mere incapacity of believing me, were I to tell them what tobacco has been to me, the drudging service which I have paid, the slavery which I have vowed to it. How, when I have resolved to quit it, a feeling as of ingratitude has started up; how it has put on personal claims and made the demands of a friend upon me. How the reading of it casually in a book, as where Adams takes his whiff in the chimney-corner of some inn in Joseph Andrews, or Piscator in the Complete Angler breaks his fast upon a morning pipe in that delicate room *Piscatoribus Sacrum*, has in a moment broken down the resistance of weeks. How a pipe was ever in my midnight path before me, till the vision forced me to realize it,—how then its ascending vapors curled, its fragrance lulled, and the thousand delicious ministerings conversant about it, employing every faculty, extracted the sense of pain. How from illuminating it came to darken, from a quick solace it turned to a negative relief, thence to a restlessness and dissatisfaction, thence to a positive misery. How, even now, when the whole secret stands confessed in all its dreadful truth before me, I feel myself linked to it beyond the power of revocation. Bone of my bone—

Persons not accustomed to examine the motives of their actions, to reckon up the countless nails that rivet the chains of habit, or perhaps being bound by none so obdurate as those I have confessed to, may recoil from this as from an overcharged picture. But what short of such a bondage is it, which in spite of protesting friends, a weeping wife and a reprobating world, chains down many a poor fellow, of no original indisposition to goodness, to his pipe and his pot?

I have seen a print after Correggio, in which three female figures are ministering to a man who sits fast bound at the root of a tree. Sensuality is soothing him, Evil Habit is nailing him to a branch, and Repugnance at the same instant of time is applying a snake to his side. In his face is feeble delight, the recollection of past rather than perception of present pleasure, languid enjoyment of evil with utter imbecility to good, a Sybaritic effeminacy, a submission to bondage, the springs of the will gone down like a broken clock, the sin and the suffering co-instantaneous, or the latter forerunning the former, remorse preceding action—all this represented in one point of time.—When I saw this, I admired the wonderful skill of the painter. But when I went away I wept because I thought of my own condition.

Of that there is no hope that it should ever change. The waters have gone over me. But out of the black depths could I be heard, I would cry out to all those who have but set a foot in the perilous

flood. Could the youth to whom the flavor of his first wine is delicious as the opening scenes of life or the entering upon some newly discovered paradise, look into my desolation, and be made to understand what a dreary thing it is when a man shall feel himself going down a precipice with open eyes and a passive will,—to see his destruction and have no power to stop it, and yet to feel it all the way emanating from himself; to perceive all goodness emptied out of him, and yet not to be able to forget a time when it was otherwise; to bear about the piteous spectacle of his own self-ruins:—could he see my fevered eye, feverish with last night's drinking, and feverishly looking for this night's repetition of the folly; could he feel the body of the death out of which I cry hourly with feebler and feebler outcry to be delivered,—it were enough to make him dash the sparkling beverage to the earth in all the pride of its mantling temptation; to make him clasp his teeth,

and not undo 'em

To suffer wet damnation to run thro' 'em.

Yea, but (methinks I hear somebody object) if sobriety be that fine thing you would have us to understand, if the comforts of a cool brain are to be preferred to that state of heated excitement which you describe and deplore, what hinders in your own instance that you do not return to those habits from which you would induce others never to swerve? if the blessing be worth preserving, is it not worth recovering?

Recovering!—O if a wish could transport me back to those days of youth, when a draught from the next clear spring could slake any heats which summer suns and youthful exercise had power to stir up in the blood, how gladly would I return to thee, pure element, the drink of children, and of child-like holy hermit. In my dreams I can sometimes fancy thy cool refreshment purling over my burning tongue. But my waking stomach rejects it. That which refreshes innocence, only makes me sick and faint.

But is there no middle way betwixt total abstinence and the excess which kills you?—For your sake, reader, and that you may never attain to my experience, with pain I must utter the dreadful truth, that there is none, none that I can find. In my stage of habit (I speak not of habits less confirmed—for some of them I believe the advice to be most prudential) in the stage which I have reached, to stop short of that measure which is sufficient to draw on torpor and sleep, the benumbing apoplectic sleep of the drunkard, is to have taken none at all. The pain of the self-denial is all one. And what that is, I had rather the reader should believe on my credit, than know from his own trial. He will come to know it, whenever he shall arrive in that state, in which, paradoxical as it may appear, reason

shall only visit him through intoxication: for it is a fearful truth, that the intellectual faculties by repeated acts of intemperance may be driven from their orderly sphere of action, their clear day-light ministries, until they shall be brought at last to depend, for the faint manifestation of their departing energies, upon the returning periods of the fatal madness to which they owe their devastation. The drinking man is never less himself than during his sober intervals. Evil is so far his good.*

Behold me then, in the robust period of life, reduced to imbecility and decay. Hear me count my gains, and the profits which I have derived from the midnight cup.

Twelve years ago I was possessed of a healthy frame of mind and body. I was never strong, but I think my constitution (for a weak one) was as happily exempt from the tendency to any malady as it was possible to be. I scarce knew what it was to ail anything. Now, except when I am losing myself in a sea of drink, I am never free from those uneasy sensations in head and stomach, which are so much worse to bear than any definite pains or aches.

At that time I was seldom in bed after six in the morning summer and winter. I awoke refreshed, and seldom without some merry thoughts in my head, or some piece of a song to welcome the new-born day. Now, the first feeling which besets me, after stretching out the hours of recumbence to their last possible extent, is a forecast of the wearisome day that lies before me, with a secret wish that I could have lain on still, or never awaked.

Life itself, my waking life, has much of the confusion, the trouble, and obscure perplexity, of an ill dream. In the day time I stumble upon dark mountains.

Business, which, though never particularly adapted to my nature, yet as something of necessity to be gone through, and therefore best undertaken with cheerfulness, I used to enter upon with some degree of alacrity, now wearies, affrights, perplexes me. I fancy all sorts of discouragements, and am ready to give up an occupation which gives me bread, from a harassing conceit of incapacity. The slightest commission given me by a friend, or any small duty which I have to perform for myself, as giving orders to a tradesman, &c., haunts me as a labor impossible to be got through. So much the springs of action are broken.

The same cowardice attends me in all my intercourse with man-

*When poor M—painted his last picture, with a pencil in one trembling hand and a glass of brandy and water in the other, his fingers owed the comparative steadiness, with which they were enabled to go from a repetition of practices, the general effect of which had shaken both through their task in an imperfect manner, to a temporary firmness derived them and him so terribly.

kind. I dare not promise that a friend's honor, or his cause, would be safe in my keeping, if I were put to the expense of any manly resolution in defending it. So much the springs of moral action are deadened within me.

My favorite occupations in times past, now cease to entertain. I can do nothing readily. Application for ever so short a time kills me. This poor abstract of my condition was penned at long intervals, with scarcely any attempt at connection of thought, which is now difficult to me.

The noble passages which formerly delighted me in history or poetic fiction, now only draw a few weak tears, allied to dotage. My broken and dispirited nature seems to sink before anything great and admirable.

I perpetually catch myself in tears, for any cause, or none. It is inexpressible how much this infirmity adds to a sense of shame, and a general feeling of deterioration.

These are some of the instances, concerning which I can say with truth, that it was not always so with me.

Shall I lift up the veil of my weakness any further? or is this disclosure sufficient?

I am a poor nameless egotist, who have no vanity to consult by these Confessions. I know not whether I shall be laughed at, or heard seriously. Such as they are, I commend them to the reader's attention, if he find his own case any way touched. I have told him what I am come to. Let him stop in time.
